#### **Structures**

# struct DtAtsc3DemodL1Data

This structure specifies the ATSC layer-1 signaling data.

# **Members**

m Bootstrap

Structure specifying the ATSC 3.0 bootstrap data. See DtAtsc3DemodBootstrapData for details.

m L1Basic

Structure specifying the ATSC 3.0 L1-Basic signaling data. See DtAtsc3DemodL1BasicData for details.

m L1Detail

Structure specifying the ATSC 3.0 L1-Detail signaling data. See DtAtsc3DemodL1DetailData for details.

# struct DtAtsc3DemodBootstrapData

This structure specifies the ATSC 3.0 bootstrap signaling data.

#### **Members**

m MinorVersion

Minor version. Minor version number signaled in the bootstrap. The valid range is 0 ... 7.

m NumSymbols

Number of bootstrap symbols.

m EasWakeup

Emergency alert signal wake-up. The valid range is 0 ... 3.

m MinTimeToNext

Minimum time interval to next frame. The valid range is 0 ... 31.

m SystemBandwidth

System bandwidth used for the post-bootstrap portion of the current frame.

| Value              | Meaning            |
|--------------------|--------------------|
| DTAPI_ATSC3_6MHZ   | 6 MHz              |
| DTAPI_ATSC3_7MHZ   | 7 MHz              |
| DTAPI_ATSC3_8MHZ   | 8 MHz              |
| DTAPI_ATSC3_GT8MHZ | Greater than 8 MHz |

#### m BsrCoefficient

Sample rate post-bootstrap of the current frame = (N+16) \* 0.384MHz. The valid range is 0 ... 127.

m PreambleStructure

Signaling the structure of post-bootstrap symbols. Its value specifies the preamble FFT-size, preamble guard interval, preamble pilot and L1-Basic FEC mode according Annex H of ATSC 3.0 Physical Layer Protocol.

# m\_L1BasicFecMode

The FEC-type mode used for L1-Basic, derived from  $m\_PreambleStructure$ . The valid range is 1 ... 5.

# $m\_PreambleFftSize$

The FFT-size used for the preamble symbols, derived from m PreambleStructure.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_ATSC3_FFT_8K  | 8K FFT  |
| DTAPI_ATSC3_FFT_16K | 16K FFT |
| DTAPI_ATSC3_FFT_32K | 32K FFT |

# ${\it m\_PreambleGuardInterval}$

The guard interval between the preamble symbols, derived from m PreambleStructure.

| Value                  | Meaning   |
|------------------------|-----------|
| DTAPI_ATSC3_GI_1_192   | GI1_192   |
| DTAPI_ATSC3_GI_2_384   | GI2_384   |
| DTAPI_ATSC3_GI_3_512   | Gl3_512   |
| DTAPI_ATSC3_GI_4_768   | GI4_768   |
| DTAPI_ATSC3_GI_5_1024  | GI5_1024  |
| DTAPI_ATSC3_GI_6_1536  | Gl6_1536  |
| DTAPI_ATSC3_GI_7_2048  | GI7_2048  |
| DTAPI_ATSC3_GI_8_2432  | GI8_2432  |
| DTAPI_ATSC3_GI_9_3072  | GI9_3072  |
| DTAPI_ATSC3_GI_10_3648 | GI10_3648 |
| DTAPI_ATSC3_GI_11_4096 | GI11_4096 |
| DTAPI_ATSC3_GI_12_4864 | GI12_4864 |

# m PreamblePilotDx

The DX value of the preamble pilot pattern, derived from m PreambleStructure.

| Value                | Meaning |
|----------------------|---------|
| DTAPI_ATSC3_PP_DX_3  | DX=3    |
| DTAPI_ATSC3_PP_DX_4  | DX=4    |
| DTAPI_ATSC3_PP_DX_6  | DX=6    |
| DTAPI_ATSC3_PP_DX_8  | DX=8    |
| DTAPI_ATSC3_PP_DX_12 | DX=12   |
| DTAPI_ATSC3_PP_DX_16 | DX=16   |
| DTAPI_ATSC3_PP_DX_24 | DX=24   |
| DTAPI_ATSC3_PP_DX_32 | DX=32   |

# struct DtAtsc3DemodL1BasicData

This structure specifies the ATSC 3.0 L1-Basic signaling data.

```
struct DtAtsc3DemodL1BasicData
  int m Version;
                         // L1-Basic structure version

  int m_FirstSubMiso;  // MISO
int m_FirstSubFftSize;  // FFT-size
  int m FirstSubReducedCarriers; // Carrier reduction coefficient
  int m FirstSubGuardInterval; // Guard interval
  int m FirstSubNumOfdmSymbols; // Number of payload OFDM symbol
  int m FirstSubPilotPattern; // Pilot pattern
  int m FirstSubPilotBoost; // Pilot power boost
```

# **Members**

m Version

L1-Basic structure version, shall be 0.

m MimoScatPilotEnc

MIMO pilot encoding scheme.

| Value | Meaning                                    |
|-------|--|
| 0     | Walsh-Hadamard pilots or no MIMO subframes |
| 1     | Null pilots                                |

m LlsFlag

If true, indicates one or more PLPs carry low level signaling information.

#### m TimeInfoFlag

Specifies the presence or absence of the timing information in the current frame.

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_ATSC3_TIME_NONE | No time information is included                       |
| DTAPI_ATSC3_TIME_MS   | Time information in millisecond precision is included |
| DTAPI_ATSC3_TIME_US   | Time information in microsecond precision is included |
| DTAPI_ATSC3_TIME_NS   | Time information in nanosecond precision is included  |

#### m ReturnChannelFlag

If true, a dedicated return channel (DRC) is present.

#### m Papr

The peak to average power reduction method.

| Value                   | Meaning                                     |
|-------------------------|---|
| DTAPI_ATSC3_PAPR_NONE   | None  |
| DTAPI_ATSC3_PAPR_ACE    | ACE - Active Constellation Extension        |
| DTAPI_ATSC3_PAPR_TR     | TR - Power reduction with reserved carriers |
| DTAPI_ATSC3_PAPR_ACE_TR | ACE and TR                                  |

#### m FrameLengthMode

Specifies the frame length alignment mode.

| Value                    | Meaning               |
|--------------------------|-----------------------|
| DTAPI_ATSC3_ALIGN_TIME   | Time-aligned frames   |
| DTAPI_ATSC3_ALIGN_SYMBOL | Symbol-aligned frames |

#### m FrameLength

If  $m_FrameLengthMode = = DTAPI_ATSC3_ALIGN_TIME$ , it specifies the length of a frame in units of 5 milliseconds. The valid values are 0 and 10 ... 1000.

#### m ExcessSamples

If  $m_FrameLengthMode = = DTAPI_ATSC3_ALIGN_TIME$ , it specifies the additional number of excess samples included in the guard interval of each non-preamble OFDM symbol.

#### m TimeOffset

If  $m_FrameLengthMode = \texttt{DTAPI\_ATSC3\_ALIGN\_SYMBOL}$ , it specifies the number of sample periods between the nearest preceding or coincident millisecond boundary and the leading edge of the frame.

#### m AdditionalSamples

If  $m_FrameLengthMode = = DTAPI_ATSC3_ALIGN_SYMBOL$ , it specifies the number of additional samples added at the end of a frame.

#### m NumSubframes

Number of subframes. The valid range is 1 ... 256.

#### m PreambleNumSymbols

Number of preamble OFDM symbols. The valid range is 1 ... 8.

#### m PreambleReducedCarriers

Specifies the preamble carrier reduction. The valid range is 0 ... 4.

#### m L1DetailSize

Specifies the size (in bytes) of the L1-Detail information.

# m L1DetailFecMode

The FEC-type mode used for L1-Detail. The valid range is 1 ... 7.

#### m L1DetailAddParity

L1-Detail aditional parity mode, specifying the ratio (K) of the number of additional parity bits. The valid range is 0 ... 2.

#### $\it m$ L1DetailNumCells

Specifies the size (in OFDM cells) of the coded and modulated L1-Detail + additional parity bits of the next frame.

# m FirstSubMimo

If true, MIMO is used for the first subframe.

#### m FirstSubMiso

The MISO option used for the first subframe.

| Value                 | Meaning                    |
|-----------------------|----------------------------|
| DTAPI_ATSC3_MISO_NONE | No MISO                    |
| DTAPI_ATSC3_MISO_64   | MISO with 64 coefficients  |
| DTAPI_ATSC3_MISO_256  | MISO with 256 coefficients |

#### m FirstSubFftSize

FFT-size for the first subframe.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_ATSC3_FFT_8K  | 8K FFT  |
| DTAPI_ATSC3_FFT_16K | 16K FFT |
| DTAPI_ATSC3_FFT_32K | 32K FFT |

# m FirstSubReducedCarriers

Specifies the carrier reduction for the first subframe. The valid range is 0 ... 4.

# $m\_FirstSubGuardInterval$

The guard interval between data symbols for the first subframe.

| Value                  | Meaning   |
|------------------------|-----------|
| DTAPI_ATSC3_GI_1_192   | GI1_192   |
| DTAPI_ATSC3_GI_2_384   | GI2_384   |
| DTAPI_ATSC3_GI_3_512   | Gl3_512   |
| DTAPI_ATSC3_GI_4_768   | GI4_768   |
| DTAPI_ATSC3_GI_5_1024  | GI5_1024  |
| DTAPI_ATSC3_GI_6_1536  | Gl6_1536  |
| DTAPI_ATSC3_GI_7_2048  | GI7_2048  |
| DTAPI_ATSC3_GI_8_2432  | GI8_2432  |
| DTAPI_ATSC3_GI_9_3072  | GI9_3072  |
| DTAPI_ATSC3_GI_10_3648 | GI10_3648 |
| DTAPI_ATSC3_GI_11_4096 | GI11_4096 |
| DTAPI_ATSC3_GI_12_4864 | GI12_4864 |

# ${\it m\ FirstSubNumOfdmSymbols}$

Specifies the total number of data payload OFDM symbols, including any subframe-boundary symbol(s) within the first subframe. The valid range is 1 ... 2048.

# $m\_FirstSubPilotPatern$

The scattered pilot pattern for the first subframe.

| Value               | Meaning         |
|---------------------|-----------------|
| DTAPI_ATSC3_PP_3_2  | SP3_2 / MP3_2   |
| DTAPI_ATSC3_PP_3_4  | SP3_4 / MP3_4   |
| DTAPI_ATSC3_PP_4_2  | SP4_2 / MP4_2   |
| DTAPI_ATSC3_PP_4_4  | SP4_4 / MP4_4   |
| DTAPI_ATSC3_PP_6_2  | SP6_2 / MP6_2   |
| DTAPI_ATSC3_PP_6_4  | SP6_4 / MP6_4   |
| DTAPI_ATSC3_PP_8_2  | SP8_2 / MP8_2   |
| DTAPI_ATSC3_PP_8_4  | SP8_4 / MP8_4   |
| DTAPI_ATSC3_PP_12_2 | SP12_2 / MP12_2 |
| DTAPI_ATSC3_PP_12_4 | SP12_4 / MP12_4 |
| DTAPI_ATSC3_PP_16_2 | SP16_2 / MP16_2 |
| DTAPI_ATSC3_PP_16_4 | SP16_4 / MP16_4 |
| DTAPI_ATSC3_PP_24_2 | SP24_2 / MP24_2 |
| DTAPI_ATSC3_PP_24_4 | SP24_4 / MP24_4 |
| DTAPI_ATSC3_PP_32_2 | SP32_2 / MP32_2 |
| DTAPI_ATSC3_PP_32_4 | SP32_4 / MP32_4 |

# ${\it m\_FirstSubPilotBoost}$

Specifies the power of the scattered pilots for the first subframe. The valid range is 0... 4.

# m FirstSubSbsFirst

If true, the first symbol of the first subframe is a subframe boundary symbol.

# m FirstSubSbsLast

If true, the last symbol of the first subframe is a subframe boundary symbol.

# struct DtAtsc3DemodL1DetailData

This structure specifies the ATSC 3.0 L1-Detail signaling data.

#### **Members**

m Version

L1-Detail structure version, shall be 0.

m NumRf

Specifies the number of frequencies involved in channel bonding, not including the frequency of the present channel.

m RfFrequency

An array, specifying the center frequencies (in 10kHz) of the other RF channels involved in channel bonding.

m TimeSec

If DtAtsc3DemodL1DetailData::m\_FrameLengthMode!=DTAPI\_ATSC3\_TIME\_NONE, is specifies the seconds component of the time information.

m TimeMillisec

If DtAtsc3DemodL1DetailData::m\_FrameLengthMode==DTAPI\_ATSC3\_TIME\_MS, it specifies the milliseconds component of the time information.

m TimeMicrosec

If DtAtsc3DemodL1DetailData::m\_FrameLengthMode==DTAPI\_ATSC3\_TIME\_US, it specifies the microseconds component of the time information.

m TimeNanosec

If DtAtsc3DemodL1DetailData::m\_FrameLengthMode==DTAPI\_ATSC3\_TIME\_NS, it specifies the nanoseconds component of the time information.

m AgeOfTimeInfo

Specifies the age of the last time information in nanoseconds.

m Subframes

A vector specifying the ATSC 3.0 modulation parameters for the subframes.

**Note**: The L1-Basic first-subframe parameters are copied in the first element of the vector.

# struct DtAtsc3DemodL1SubframeData

This structure specifies the ATSC 3.0 L1-Detail subframe signaling data.

## **Members**

m Mimo

If true, MIMO is used.

 $m_Miso$ 

The MISO option used.

| Value                 | Meaning                    |
|-----------------------|----------------------------|
| DTAPI_ATSC3_MISO_NONE | No MISO                    |
| DTAPI_ATSC3_MISO_64   | MISO with 64 coefficients  |
| DTAPI_ATSC3_MISO_256  | MISO with 256 coefficients |

#### m FftSize

FFT-size.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_ATSC3_FFT_8K  | 8K FFT  |
| DTAPI_ATSC3_FFT_16K | 16K FFT |
| DTAPI_ATSC3_FFT_32K | 32K FFT |

m ReducedCarriers

Specifies the carrier reduction. The valid range is 0 ... 4.

# $m\_GuardInterval$

The guard interval between data symbols.

| Value                  | Meaning |
|------------------------|---------|
| DTAPI_ATSC3_GI_1_192   | 1/192   |
| DTAPI_ATSC3_GI_2_384   | 2/384   |
| DTAPI_ATSC3_GI_3_512   | 3/512   |
| DTAPI_ATSC3_GI_4_768   | 4/768   |
| DTAPI_ATSC3_GI_5_1024  | 5/1024  |
| DTAPI_ATSC3_GI_6_1536  | 6/1536  |
| DTAPI_ATSC3_GI_7_2048  | 7/2048  |
| DTAPI_ATSC3_GI_8_2432  | 8/2432  |
| DTAPI_ATSC3_GI_9_3072  | 9/3072  |
| DTAPI_ATSC3_GI_10_3648 | 10/3648 |
| DTAPI_ATSC3_GI_11_4096 | 11/4096 |
| DTAPI_ATSC3_GI_12_4864 | 12/4864 |

# m NumOfdmSymbols

Specifies the total number of data payload OFDM symbols, including any subframe-boundary symbol(s) within the subframe. The valid range is 1 ... 2048.

#### m PilotPatern

The scattered pilot pattern.

| Value               | Meaning         |
|---------------------|-----------------|
| DTAPI_ATSC3_PP_3_2  | SP3_2 / MP3_2   |
| DTAPI_ATSC3_PP_3_4  | SP3_4 / MP3_4   |
| DTAPI_ATSC3_PP_4_2  | SP4_2 / MP4_2   |
| DTAPI_ATSC3_PP_4_4  | SP4_4 / MP4_4   |
| DTAPI_ATSC3_PP_6_2  | SP6_2 / MP6_2   |
| DTAPI_ATSC3_PP_6_4  | SP6_4 / MP6_4   |
| DTAPI_ATSC3_PP_8_2  | SP8_2 / MP8_2   |
| DTAPI_ATSC3_PP_8_4  | SP8_4 / MP8_4   |
| DTAPI_ATSC3_PP_12_2 | SP12_2 / MP12_2 |
| DTAPI_ATSC3_PP_12_4 | SP12_4 / MP12_4 |
| DTAPI_ATSC3_PP_16_2 | SP16_2 / MP16_2 |
| DTAPI_ATSC3_PP_16_4 | SP16_4 / MP16_4 |
| DTAPI_ATSC3_PP_24_2 | SP24_2 / MP24_2 |
| DTAPI_ATSC3_PP_24_4 | SP24_4 / MP24_4 |
| DTAPI_ATSC3_PP_32_2 | SP32_2 / MP32_2 |
| DTAPI_ATSC3_PP_32_4 | SP32_4 / MP32_4 |

#### m\_PilotBoost

Specifies the power of the scattered pilots for the subframe. The valid range is 0... 4.

# m SbsFirst

If true, the first symbol of the subframe is a subframe boundary symbol.

#### m SbsLast

If true, the last symbol of the subframe is a subframe boundary symbol.

# $m_Multiplex$

Specifies the current subframe is time-division multiplexed/concatenated in time with adjacent subframes, shall be 0.

#### m FreqInterleaver

If true, the frequency interleaver is enabled and used, otherwise the frequency interleaver is bypassed and not used.

# m SbsNumNullCells

Specifies the number of null cells in the subframe boundary symbol(s) of the current subframe.

# m Plps

A vector specifying the ATSC 3.0 modulation parameters for the PLPs within the subframe.

# struct DtAtsc3DemodL1PlpData

This structure specifies the ATSC 3.0 L1-Detail PLP signaling data.

#### **Members**

m Id

Unique identification of the PLP within an ATSC-system. The valid range is 0 ... 63.

m LlsFlag

If true, indicates the PLP carries low level signaling information.

m Layer

Specifies whether the PLP belongs to the core or to the enhanced layer.

| Value                      | Meaning        |
|----------------------------|----------------|
| DTAPI_ATSC3_LAYER_CORE     | Core layer     |
| DTAPI_ATSC3_LAYER_ENHANCED | Enhanced layer |

m Start

Specifies the index of the data cell that holds the first data cell of the current PLP in the current subframe.

# $m_Size$

Specifies the number of data cells allocated to the current PLP within the current subframe.

# m ScramblerType

Specifies the choice of scrambler type, shall be 0.

# $m\_FecCodeLength$

The LDPC FEC coding used by the PLP.

| Value                | Meaning  |
|----------------------|----------|
| DTAPI_ATSC3_LDPC_16K | 16K LDPC |
| DTAPI_ATSC3_LDPC_64K | 64K LDPC |

# m\_FecOuterCode

The outer code type used by the PLP.

| Value                  | Meaning        |
|------------------------|----------------|
| DTAPI_ATSC3_OUTER_BCH  | BCH outer code |
| DTAPI_ATSC3_OUTER_CRC  | CRC outer code |
| DTAPI_ATSC3_OUTER_NONE | No outer code  |

# $m\_Modulation$

Modulation used by the PLP.

| Value               | Meaning  |
|---------------------|----------|
| DTAPI_ATSC3_QPSK    | QPSK     |
| DTAPI_ATSC3_QAM16   | 16-QAM   |
| DTAPI_ATSC3_QAM64   | 64-QAM   |
| DTAPI_ATSC3_QAM256  | 256-QAM  |
| DTAPI_ATSC3_QAM1024 | 1024-QAM |
| DTAPI_ATSC3_QAM4096 | 4096-QAM |

# $m\_CodeRate$

Convolutional coding rate used by the PLP.

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_ATSC3_COD_2_15  | 2/15    |
| DTAPI_ATSC3_COD_3_15  | 3/15    |
| DTAPI_ATSC3_COD_4_15  | 4/15    |
| DTAPI_ATSC3_COD_5_15  | 5/15    |
| DTAPI_ATSC3_COD_6_15  | 6/15    |
| DTAPI_ATSC3_COD_7_15  | 7/15    |
| DTAPI_ATSC3_COD_8_15  | 8/15    |
| DTAPI_ATSC3_COD_9_15  | 9/15    |
| DTAPI_ATSC3_COD_10_15 | 10/15   |
| DTAPI_ATSC3_COD_11_15 | 11/15   |
| DTAPI_ATSC3_COD_12_15 | 12/15   |
| DTAPI_ATSC3_COD_13_15 | 13/15   |

# m TiMode

Time interleaver mode.

| Value                   | Meaning                                   |
|-------------------------|---|
| DTAPI_ATSC3_TIMODE_NONE | No time interleaving                      |
| DTAPI_ATSC3_TIMODE_CTI  | Convolutional time interleaver (CTI) mode |
| DTAPI_ATSC3_TIMODE_HTI  | Hybrid time interleaver (HTI) mode        |

# m FecFrameStart

Specifies the start position of the first FEC frame that begins within the current PLP during the current subframe.

#### m CtiFecFrameStart

Specifies the start position of the first complete FEC frame for the current PLP leaving the CTI in the current or subsequent subframes.

# $m_PlpType$

# PLP type.

| Value                       | Meaning       |
|-----------------------------|---------------|
| DTAPI_ATSC3_PLPTYPE_NONDISP | Non-dispersed |
| DTAPI_ATSC3_PLPTYPE_DISP    | Dispersed     |

# m TiExtInterleaving

If true, extended interleaving is used for this PLP.

#### m CtiDepth

If  $m_TiMode = = DTAPI_ATSC3_TIMODE_CTI$ , it specifies the convolutional time interleaver (CTI) depth.

| Value                     | Meaning  |
|---------------------------|--|
| DTAPI_ATSC3_CTIDEPTH_512  | 512 rows   |
| DTAPI_ATSC3_CTIDEPTH_724  | 724 rows   |
| DTAPI_ATSC3_CTIDEPTH_887  | 887 rows (1254 rows if extended interleaving is used)  |
| DTAPI_ATSC3_CTIDEPTH_1024 | 1024 rows (1448 rows if extended interleaving is used) |

#### m CtiStartRow

If  $m_TiMode = = DTAPI_ATSC3_TIMODE_CTI$ , it specifies the position of the interleaver selector at the start of the subframe.

#### m HtiInterSubframe

If true, enable the HTI inter-subframe interleaving is used.

# $m_HtiNumTiBlocks$

If the HTI inter-subframe interleaving is disabled: the number of time interleaver blocks per interleaving frame. If HTI inter-subframe interleaving is enabled: the number of subframes over which cells from one time interleaver block are carried.

#### ${\it m}$ ${\it HtiNumFecBlocksMax}$

The maximum number of FEC blocks per interleaving frame for the current PLP.

#### m HtiNumFecBlocks[16]

The number of FEC blocks contained in the interleaving frames for the current PLP.

#### m HtiCellInterleaver

If true, the HTI cell interleaving is used.

#### m LdmInjectLevel

If  $m_Layer! = DTAPI_ATSC3_LAYER_CORE$ , it specifies the enhanced layer injection level relative to the core PLP.

Values 0...9 give an injection level: m LdmInjectLevel / 2.0 dB.

Values 10...30 give an injection level: m LdmInjectLevel - 5.0 dB.

# struct DtAtsc3StreamSelPars

This structure specifies the criteria to select a PLP from an ATSC 3.0 stream.

# **Members**

 $m_PlpId$ 

Unique identification of the data PLP within the ATSC 3.0 stream. The valid range is 0 ... 63 and <code>DTAPI\_ATSC3\_PLP\_ID\_AUTO</code>. The latter value specifies automatic selection of the data PLP.

# struct DtAudChanStatus

Struct for retrieving the status of an audio channel (single stream of audio samples).

#### **Members**

m ChanIdx

Channel index in the underlying physical audio/video stream, e.g. an audio channel index in SDI. The index of the first audio channel is zero by convention.

m IsAsynchronous

Asserted if the audio samples are asynchronous with respect to the video clock.

m SampleRate

Audio sample rate in number of samples per second.

m Content

Enumeration of the Audio Channel.

| Value                      | Meaning                                       |
|----------------------------|---|
| DT_AUDCHANCONT_UNKNOWN     | Channel content is unknown or not defined yet |
| DT_AUDCHANCONT_PCM         | Channel carries PCM samples                   |
| DT_AUDCHANCONT_DATA        | Channel carries data                          |
| DT_AUDCHANCONT_UNSUPPORTED | Content detection is not supported            |

m StatusWordNumValid

The number of valid bytes in the raw audio-channel status word in m ChanStat.

m ChanStat

The audio channel status word.

# struct DtBsProgress

This structure describes the progress of an asynchronous blind scan. Used by **DtInpChannel::BlindScan** to return the current state and the transmitters found by scanning a frequency band using the **DtBsProgressFunc** callback.

#### **Members**

m FreqHz

The center frequency that was found for this transmitter.

m DemodPars

The demodulator parameters found for this transmitter.

m ProgressEvent

Enumeration defining the type of progress event.

| Value        | Meaning   |
|--------------|---|
| BS_STEP      | One frequency step is completed   |
| BS_CANCELLED | Blind scan is cancelled due to execution of DtInpChannel::CancelBlindscan or due to execution of a tuning function. |
| BS_DONE      | The blind scan is completed   |

m ChannelFound

If set, the channel is found on the transmitter frequency.

m Result

The result code of the blind scan.

# struct DtCmPars

This structure specifies channel-modelling parameters. It's used to simulate the transmission distortions that may occur in the channel between a transmitter and a receiver.

#### **Members**

m EnableAwgn

Enable Additive White Gaussian Noise (AWGN) injection.

 $m_Snr$ 

Signal-to-noise ratio. The noise power is defined relative to an imaginative OdB output signal of the modulator. This means that  $m\_Snr$  is the real signal-to-noise ratio only if the accumulated power of the paths in  $m\_Paths$  is OdB.

m EnablePaths

Enable the simulation of multiple transmission fading paths ("multi-path"). The common usage is to define one main path and several auxiliary paths for simulating echoes. If no paths are defined, a single OdB path is used.

m Paths

Vector of path parameters.

# struct DtCmPath

This structure specifies the fading parameters for a single path in a multi-path simulation.

#### **Members**

#### m Type

Enumeration defining the type of path fading.

| Value             | Meaning   |
|-------------------|---|
| CONSTANT_DELAY    | Constant delay/phase  |
| CONSTANT_DOPPLER  | Constant frequency shift  |
| RAYLEIGH_JAKES    | Rayleigh fading with Jakes power spectral density (mobile path model)         |
| RAYLEIGH_GAUSSIAN | Rayleigh fading with Gaussian power spectral density (ionospheric path model) |

#### m Attenuation

Attenuation in dB. The total attenuation of all paths should not exceed 0dB to avoid overflow of the channel simulator.

#### m Delay

Delay in  $\mu$ s. The maximum delay for an 8MHz channel is 896 $\mu$ s.

#### m Phase

Constant phase shift in degrees. Used for **constant\_delay** and **constant\_doppler**; Don't care for other path types.

# m Doppler

Doppler frequency shift in Hz for all paths except **CONSTANT\_DELAY**. The corresponding Speed in m/s is: Speed =  $f_{doppler} * 3.10^8 / f_{RF}$ .

# struct DtConstelPoint

This structure describes a constellation point in a receiver constellation diagram.

# **Members**

```
m X, m Y
```

The X- and Y-coordinate of the described constellation point.

# struct DtDabEnsembleInfo

This structure describes the DAB ensemble information used for the statistic **DTAPI\_STAT\_DAB\_ENSEM\_INFO**.

```
struct DtDabEnsembleInfo
  int m CountryId;
                            // Country identifier
  int m EnsembleReference; // Indentifier of the ensemble
  int m ExtCountryCode;
                            // Extended country code
  int m InterTableId;
                            // International table identifier
  std::wstring m Label;
                            // Label identifying this ensemble
  int m LocalTimeOffset;
                            // Local time offset in half hours from UTC
  int m LtoUnique;
                            // Covers one(=0) or several(=1) time zones
  int m TransmissionMode;
                            // Transmission mode: 1..4
  std::vector< DtDabService> m Services; // Services in this ensemble
  std::map<int, DtDabSubChannel> m_SubChannels; // Sub-channels
```

#### **Members**

m CountryId

Country identification as defined in TS 101 756.

m EnsembleReference

The number of the ensemble allocated for use within a national area.

m ExtCountryCode

Extended country code as defined in TS 101 756.

m InterTableId

International table identifier as defined in TS 101 756.

 $m_Label$ 

Label associated with this ensemble.

m LocalTimeOffset

The Local Time Offset (LTO) for the ensemble. It is expressed in multiples of half hours in the range -12 hours to +12 hours.

m TransmissionMode

DAB transmission mode: 1...4.

m Services

A vector specifying the services in this ensemble.

m SubChannels

A map specifying the sub-channels in this ensemble. The key in the map is the sub-channel identifier.

# struct DtDabService

This structure describes a single service in the DAB ensemble. It is used in struct DtDabEnsembleInfo.

#### **Members**

m CondAccessId

Access Control System (ACS) identifier used for the service.

m CountryId

Country identification as defined in TS 101 756.

m ExtCountryCode

Extended country code as defined in TS 101 756.

m IsLocal

Indicates whether the service is available over the whole, or only a partial area served by the ensemble, false: whole ensemble service area; true: partial ensemble service area.

m Label

Label associated with this service.

m ServiceReference

Indicates the number of the service.

m Components

A vector specifying the service components in this service.

# struct DtDabServiceComp

This structure describes a single DAB service component. It is used in struct DtDabService.

#### **Members**

#### m AudioServiceCompType

Type of the audio component if the transport mechanism is "MSC stream audio" else -1.

| Value | Meaning  |
|-------|--|
| 0     | Foreground sound (MPEG 1/2 layer 2)            |
| 1     | Background sound (MPEG 1/2 layer 2)            |
| 2     | Multi-channel audio extension (MPEG 2 layer 2) |
| 63    | AAC audio (DAB+) (MPEG 4 HE AAC v2)            |
| Other | Reserved                                       |

#### m DataServiceCompType

Type of the data service component as defined in TS 101 756 if the transport mechanism is "MSC stream data" else -1.

| Value | Meaning                       |
|-------|-------------------------------|
| 24    | MPEG-2 Transport Stream (DMB) |
| Other | Specified in TS 101 756       |

#### m FidChannelId

Identifies the service component carried in the Fast Information Data Channel (FIDC) if the transport mechanism is "FIDC" else -1.

#### m HasCondAccess

Indicates whether access control applies to the service component. false: no access control or access control applies only to a part of the service component; true: access control applies to the whole of the service component.

#### m IsPrimary

Indicates whether the service component is the primary one, false: not primary (secondary); true: primary.

#### m Label

Label associated with this service component.

#### m Language

Indicates the language of the audio or data service component as defined in TS 101 756 or -1 if not available.

# m SubChannelId

Identifies the sub-channel in which the service component is carried if the transport mechanism is "MSC stream audio" or "MSC stream data" else -1.

# m ServiceCompId

Uniquely identifies the service component within the ensemble if the transport mechanism is "MSC packet data" else -1.

# m TransportMechanismId

The transport mechanism used.

| Value | Meaning  |
|-------|--|
| 0     | Main Service Channel (MSC) - Stream mode - audio |
| 1     | Main Service Channel (MSC) - Stream mode - data  |
| 2     | Fast Information Data Channel (FIDC)             |
| 3     | Main Service Channel (MSC) - Packet mode - data  |

# struct DtDabEtiStreamSelPars

This structure specifies the selection parameters for a DAB Ensemble Transport Interface (ETI) stream.

```
struct DtDabEtiStreamSelPars
{
    // No parameters required
};
```

# **Members**

DtDabEtiStreamSelPars structure has no members

#### **Remark**

All DAB sub-channels are selected and output in a DAB Ensemble Transport Interface (ETI) stream.

# struct DtDabStreamSelPars

This structure specifies the criteria to select a sub-channel from a DAB stream.

#### **Members**

#### m BitrateKbps

Specifies the bitrate of the channel in kbps. For UEP profile the valid range is: 32 ... 384 kbps and the bitrate must be a multiple of 8 kbps. For EEP profile the valid range is: 8 ... 2048 kbps and the bitrate must be a multiple of 8 kbps.

#### m ErrProtLevel

Error protection level, the valid range for the UEP profile is: 1 ... 4; the valid range for the EEP profile is: 1 ... 5.

#### m ErrProtMode

Error protection mode.

| Value         | Meaning                        |
|---------------|--------------------------------|
| DTAPI_DAB_UEP | Unequal Error Protection (UEP) |
| DTAPI_DAB_EEP | Equal Error Protection (EEP)   |

#### m ErrProtOption

Protection level option for EEP: 0 or 1. Only meaningful for EEP profile.

#### m StartAddress

Specifies the address of the first capacity unit (CU) of the sub-channel. The valid range is: 0 ... 863.

#### m ExtractionMode

| Value              | Meaning                    |
|--------------------|----------------------------|
| DAB_RAW            | Raw DAB stream             |
| DAB_EXTRACTION_AAC | AAC/DAB+ stream extraction |
| DAB_EXTRACTION_DMB | DMB stream extraction      |

# struct DtDabSubChannel

This structure describes a single DAB sub-channel. A DAB sub-channel contains the data for a single audio or data stream. Multiple service components can refer to the same sub-channel. DtDabSubChannel is used in struct DtDabEnsembleInfo.

#### **Members**

m BitrateKbps

The bitrate of the channel in kbps.

m ErrProtLevel

Error protection level, for UEP profile: 1 ... 4; for EEP profile: 1 ... 5.

m ErrProtMode

Error protection mode.

| Value         | Meaning                        |
|---------------|--------------------------------|
| DTAPI_DAB_UEP | Unequal Error Protection (UEP) |
| DTAPI_DAB_EEP | Equal Error Protection (EEP)   |

#### m\_ErrProtOption

Protection level option, for EEP: 0 or 1. For UEP: -1.

m FecScheme

Indicates the forward error correction (FEC) scheme in use, 0: no FEC scheme applied; 1: FEC for MSC packet mode; other values are reserved for future use.

m StartAddress

The address of the first capacity unit (CU) of the sub-channel, range: 0 ... 863.

 $m_SubChannelId$ 

Identifies the sub-channel.

m SubChannelSize

The number of capacity units occupied by the sub-channel.

m UepTableIndex

Index which identifies one of the 64 options available for the sub-channel size and protection level as defined in EN 300 401 table 6.

# $m\_UepTableSwitch$

Indicates whether the table index refers to table 6 or some other use, 0: table 6 is used; 1: reserved.

# struct DtDabTransmitterId

This structure describes the DAB transmitter identification for a single transmitter, it is used in struct DtDabTransmitterIdInfo.

# **Members**

m TxMainId

Transmitter main identifier; 0...5 for DAB transmission mode 3, otherwise 0...69.

m TxSubId

Transmitter sub-identifier; 0...23

m RelativePowerdB

Transmitter power, relative to total power in dB.

# struct DtDabTransmitterIdInfo

This structure describes the DAB transmitter identification information (DAB-TII), used for the statistic <code>DTAPI\_STAT\_DAB\_TXID\_INFO</code>.

# **Members**

 $m\_Transmitters$ 

A vector specifying the identification information of all received transmitter signals.

# struct DtDemodDvbS2ModCodSettings

This structure can be applied for a certain MODCOD.

## **Members**

m Enable

Control if this MODCOD should be demodulated at all.

m SnrThreshold

The SNR threshold to be used by the AutoMute algorithm for this MODCOD, in units of 0.1dB.

# struct DtDemodLdpcStats

This structure describes the LDPC information used for the statistic DTAPI STAT LDPC STATS.

#### **Members**

m FecBlocksCount

The total number of decoded FEC-blocks.

m UncorrFecBlocksCount

The total number of uncorrected FEC-blocks (not exact).

m FecBlocksCount1

The number of decoded FEC-blocks, reset when the statistic is read.

m FecBlocksItCount

The number of LDPC iterations, the average number of LDPC-iterations =  $m\_FecBlocksItCount / m\_FecBlocksCount1$ .

m FecBlockCountItMin

The minimum number of LDPC-iterations for a FEC-block, reset when the statistic is read.

m FecBlockCountItMax

The maximum number of LDPC-iterations for a FEC-block, reset when the statistic is read.

m BchBitCount

The total number of decoded data bits, including BCH bits.

m BchBitErrorCount

The bit error count before LDPC.

The BER before LDPC is approximately:  $m_BchBitErrorCount / m_BchBitCount$ , this is accurate if there are no uncorrected blocks ( $m_DcorrFecBlocksCount = 0$ ).

# struct DtDemodMaLayerData

This structure describes the DVB-C2/T2 mode adaptation layer information used for the statistic DTAPI\_STAT\_MA\_DATA.

#### **Members**

m Hem

If true, the PLP uses High Efficiency Mode (HEM); Otherwise Normal Mode (NM) is used.

m Npd

If true, Null Packet Deletion (NPD) is active, otherwise it is not active.

m Issy

ISSY mode.

| Value   | Meaning                   |
|---|---------------------------|
| DTAPI_DVBC2_ISSY_NONE / DTAPI_DVBT2_ISSY_NONE     | No ISSY field is used     |
| DTAPI_DVBC2_ISSY_SHORT/<br>DTAPI_DVBT2_ISSY_SHORT | 2-byte ISSY field is used |
| DTAPI_DVBC2_ISSY_LONG / DTAPI_DVBT2_ISSY_LONG     | 3-byte ISSY field is used |

```
m IssyBufs
```

Value of the ISSY BUFS parameter.

 $m_IssyTto$ 

Last value of ISSY TTO, DVB-T2 only.

m IssyBufStat

Last value of ISSY BUFSTAT, DVB-C2/S2 only.

# struct DtDemodMaLayerStat

This structure describes the DVB-C2/T2 mode adaptation layer statistics used for the statistic DTAPI\_STAT\_MA\_STATS.

### **Members**

m HdrCrc8ErrorCount

Number of CRC8 errors for BB-frame headers.

m PckCrc8ErrorCount

Number of CRC8 errors for packets, only for HEM=0.

m FramingErrorCount

Number of consistency errors found in SYNCD, DFL and UPD fields.

m CommonPlpResyncCount

Number of times a resynchronization between data and common PLP was needed. It normally happens only in case of receive errors. This field is only updated in the corresponding data PLP.

# struct DtDemodParsAtsc

This structure describes the demodulation parameters for ATSC.

## **Members**

 $m\_Constellation$ 

The VSB constellation.

| Value                | Meaning | Symbol Rate (bd) | TS Rate (bps) |
|----------------------|---------|------------------|---------------|
| DTAPI_MOD_ATSC_VSB8  | 8-VSB   | 10,762,238       | 19,392,658    |
| DTAPI_MOD_ATSC_VSB16 | 16-VSB  | 10,762,238       | 38,785,317    |

## struct DtDemodParsAtsc3

This structure describes the demodulation parameters for ATSC 3.0.

## **Members**

m Bandwidth

Bandwidth.

| Value            | Meaning |
|------------------|---------|
| DTAPI_ATSC3_6MHZ | 6 MHz   |
| DTAPI_ATSC3_7MHZ | 7 MHz   |
| DTAPI_ATSC3_8MHZ | 8 MHz   |

## m AlpLenIncludesAhSi

If true, the ALP payload length includes the additional header for signaling information. 2016 spec, Korean mode, nonstandard This can be used to receive signaling information according the 2016 specification, used in Korea, nonstandard; default false

# struct DtDemodParsDab

This structure describes the demodulation parameters for DAB.

## **Members**

DtDemodParsDab structure has no members.

# struct DtDemodParsDvbC2

This structure describes the demodulation parameters for DVB-C2.

## **Members**

m Bandwidth

Channel raster of the network.

| Value            | Meaning |
|------------------|---------|
| DTAPI_DVBC2_6MHZ | 6 MHz   |
| DTAPI_DVBC2_8MHZ | 8 MHz   |

#### m ScanL1Part2Data

Scan and cache the full L1Part2Data after each DVBC2 tune. If this flag is set, the statistic DTAPI\_STAT\_DVBC2\_L1P2DATA returns all data slices including PLPs for the tuned channel instead of only the active. Setting this flag increases the time needed for tuning and locking.

# struct DtDemodParsDvbS

This structure describes the demodulation parameters for DVB-S.

#### **Members**

m CodeRate

DVB-S code rate

| Value             | Meaning              |
|-------------------|----------------------|
| DTAPI_MOD_1_2     | Code rate 1/2        |
| DTAPI_MOD_2_3     | Code rate 2/3        |
| DTAPI_MOD_3_4     | Code rate 3/4        |
| DTAPI_MOD_4_5     | Code rate 4/5        |
| DTAPI_MOD_5_6     | Code rate 5/6        |
| DTAPI_MOD_6_7     | Code rate 6/7        |
| DTAPI_MOD_7_8     | Code rate 7/8        |
| DTAPI_MOD_CR_AUTO | Autodetect code rate |
| DTAPI_MOD_CR_UNK  | Code rate is unknown |

## $m\_SpecInv$

Spectral inversion

| Value                           | Meaning                              |
|---------------------------------|--------------------------------------|
| DTAPI_MOD_S_S2_SPECNONINV       | No spectrum inversion detected       |
| DTAPI_MOD_S_S2_SPECINV          | Spectrum inversion detected          |
| DTAPI_MOD_S_S2_SPECINV_<br>AUTO | Autodetect spectrum inversion        |
| DTAPI_MOD_S_S2_SPECINV_UNK      | Spectrum inversion status is unknown |

#### m SymRate

The symbol rate (in bd). The value **DTAPI\_MOD\_SYMRATE\_AUTO** specifies automatic detection of the symbol rate. The value **DTAPI\_MOD\_SYMRATE\_UNK** indicates the symbol rate could not be detected.

# struct DtDemodParsDvbS2

This structure describes the demodulation parameters for DVB-S2.

## **Members**

m CodeRate

DVB-S.2 code rate

| Value             | Meaning              |
|-------------------|----------------------|
| DTAPI_MOD_1_2     | Code rate 1/2        |
| DTAPI_MOD_1_3     | Code rate 1/3        |
| DTAPI_MOD_1_4     | Code rate 1/4        |
| DTAPI_MOD_2_3     | Code rate 2/3        |
| DTAPI_MOD_2_5     | Code rate 2/5        |
| DTAPI_MOD_3_4     | Code rate 3/4        |
| DTAPI_MOD_3_5     | Code rate 3/5        |
| DTAPI_MOD_4_5     | Code rate 4/5        |
| DTAPI_MOD_5_6     | Code rate 5/6        |
| DTAPI_MOD_6_7     | Code rate 6/7        |
| DTAPI_MOD_7_8     | Code rate 7/8        |
| DTAPI_MOD_8_9     | Code rate 8/9        |
| DTAPI_MOD_9_10    | Code rate 9/10       |
| DTAPI_MOD_CR_AUTO | Autodetect code rate |
| DTAPI_MOD_CR_UNK  | Code rate is unknown |

## m FecFrame

FEC-frame length

| Value                 | Meaning                     |
|-----------------------|-----------------------------|
| DTAPI_MOD_S2_SHORTFRM | Short FEC-frame             |
| DTAPI_MOD_S2_LONGFRM  | Long FEC-frame              |
| DTAPI_MOD_S2_FRM_AUTO | Autodetect FEC-frame length |
| DTAPI_MOD_S2_FRM_UNK  | FEC-frame length is unknown |

## $m_Pilots$

## DVB-S.2 pilots

| Value                    | Meaning                  |
|--------------------------|--------------------------|
| DTAPI_MOD_S2_NOPILOTS    | Pilots disabled          |
| DTAPI_MOD_S2_PILOTS      | Pilots enabled           |
| DTAPI_MOD_S2_PILOTS_AUTO | Autodetect pilots status |
| DTAPI_MOD_S2_PILOTS_UNK  | Pilots status is unknown |

## m SpecInv

## Spectral inversion

| Value                           | Meaning                              |
|---------------------------------|--------------------------------------|
| DTAPI_MOD_S_S2_SPECNONINV       | No spectrum inversion detected       |
| DTAPI_MOD_S_S2_SPECINV          | Spectrum inversion detected          |
| DTAPI_MOD_S_S2_SPECINV_<br>AUTO | Autodetect spectrum inversion        |
| DTAPI_MOD_S_S2_SPECINV_UNK      | Spectrum inversion status is unknown |

## m\_SymRate

The symbol rate (in bd). The value **DTAPI\_MOD\_SYMRATE\_AUTO** specifies automatic detection of the symbol rate. The value **DTAPI\_MOD\_SYMRATE\_UNK** indicates the symbol rate could not be detected.

## struct DtDemodParsDvbS2Adv

This structure describes the advanced demodulation parameters for DVB-S2. This structure is a derived class from DtDemodParsDvbS2. This structure should be used to control the demodulation of each individual MODCODs in case of VCM streams.

```
struct DtDemodParsDvbS2Adv : DtDemodParsDvbS2
                             // Enable AutoMute algorithm. MODCODs with
  bool m AutoMuteModCods;
                              // a SNR threshold above the current SNR
                             // will not be demodulated.
  int m HysteresisMargin;
                             // Margin to add on top of the SNR threshold
                             // before re-enabling a certain MODCOD,
                             // in units of 0.1 dB
  std::map<DtDvbS2ModCod, DtDemodDvbS2ModCodSettings> m ModCods;
                              // List with supported MODCODs
  // Methods
  DTAPI RESULT DeleteModCod (DtDvbS2ModCod ModCod);
  DTAPI RESULT
               InitSnrThreshold(int TypeNumber);
  DTAPI RESULT SetModCod (DtDvbS2ModCod ModCod,
                                   DtDemodDvbS2ModCodSettings &Settings);
```

#### Members

m AutoMuteModCods

Enable for the AutoMute algorithm. When enabled, MODCODs with a SNR below the configured threshold will not be demodulated, in order to robustly demodulate the other MODCODs in the stream.

 $m\_HysteresisMargin$ 

The margin which is added on top of the SNR threshold before re-enabling a certain MODCOD, in units of 0.1 dB.

m ModCods

List of MODCODs which are supported by the device, which contains the settings for each MODCOD. DtDemodParsDvbS2Adv::InitSnrThreshold set the list with MODCODs.

#### **Methods**

DeleteModCod (DtDvbS2ModCod ModCod)

Delete a member from the MODCOD list, in order to exclude this MODCOD from the Auto-Mute algorithm.

```
InitSnrThreshold(int TypeNumber)
```

Init the list of MODCODs m ModCods for a certain device type, e.g. 2137 from DTA-2137(C).

```
SetModCod(DtDvbS2ModCod ModCod, DtDemodDvbS2ModCodSettings &Settings)
```

Change the settings for a certain MODCOD, e.g. the SNR threshold to be used by the Auto-Mute algorithm or control if this MODCOD should be demodulated at all.

# struct DtDemodParsDvbT

This structure describes the demodulation parameters for DVB-T.

## **Members**

m Bandwidth

Bandwidth.

| Value           | Meaning |
|-----------------|---------|
| DTAPI_DVBT_6MHZ | 6 MHz   |
| DTAPI_DVBT_7MHZ | 7 MHz   |
| DTAPI_DVBT_8MHZ | 8 MHz   |

## m CodeRate

DVB-T code rate

| Value             | Meaning              |
|-------------------|----------------------|
| DTAPI_MOD_1_2     | Code rate 1/2        |
| DTAPI_MOD_2_3     | Code rate 2/3        |
| DTAPI_MOD_3_4     | Code rate 3/4        |
| DTAPI_MOD_5_6     | Code rate 5/6        |
| DTAPI_MOD_7_8     | Code rate 7/8        |
| DTAPI_MOD_CR_AUTO | Autodetect code rate |
| DTAPI_MOD_CR_UNK  | Code rate is unknown |

## m Constellation

## Constellation

| Value                  | Meaning                  |
|------------------------|--------------------------|
| DTAPI_MOD_DVBT_QPSK    | QPSK                     |
| DTAPI_MOD_DVBT_QAM16   | 16-QAM                   |
| DTAPI_MOD_DVBT_QAM64   | 64-QAM                   |
| DTAPI_MOD_DVBT_CO_AUTO | Autodetect constellation |
| DTAPI_MOD_DVBT_CO_UNK  | Constellation is unknown |

## $m\_Guard$

## Guard interval

| Value                  | Meaning                   |
|------------------------|---------------------------|
| DTAPI_MOD_DVBT_G_1_32  | 1/32                      |
| DTAPI_MOD_DVBT_G_1_16  | 1/16                      |
| DTAPI_MOD_DVBT_G_1_8   | 1/8                       |
| DTAPI_MOD_DVBT_G_1_4   | 1/4                       |
| DTAPI_MOD_DVBT_GU_AUTO | Autodetect guard interval |
| DTAPI_MOD_DVBT_G_UNK   | Guard interval is unknown |

## m\_Interleaving

## Interleaving

| Value                  | Meaning                       |
|------------------------|-------------------------------|
| DTAPI_MOD_DVBT_INDEPTH | In-depth interleaver (2k, 4k) |
| DTAPI_MOD_DVBT_NATIVE  | Native interleaver            |
| DTAPI_MOD_DVBT_IL_AUTO | Autodetect interleaving       |
| DTAPI_MOD_DVBT_IL_UNK  | Interleaving is unknown       |

## m Mode

# Transmission mode

| Value                  | Meaning                      |
|------------------------|------------------------------|
| DTAPI_MOD_DVBT_2K      | 2k mode                      |
| DTAPI_MOD_DVBT_8K      | 8k mode                      |
| DTAPI_MOD_DVBT_MD_AUTO | Autodetect transmission mode |
| DTAPI_MOD_DVBT_MD_UNK  | Transmission mode is unknown |

# struct DtDemodParsDvbT2

This structure describes the demodulation parameters for DVB-T2.

## **Members**

m Bandwidth

Bandwidth.

| Value              | Meaning |
|--------------------|---------|
| DTAPI_DVBT2_1_7MHZ | 1.7 MHz |
| DTAPI_DVBT2_5MHZ   | 5 MHz   |
| DTAPI_DVBT2_6MHZ   | 6 MHz   |
| DTAPI_DVBT2_7MHZ   | 7 MHz   |
| DTAPI_DVBT2_8MHZ   | 8 MHz   |
| DTAPI_DVBT2_10MHZ  | 10 MHz  |

 $m_T2Profile$ 

DVB-T2 profile

| Value                    | Meaning      |
|--------------------------|--------------|
| DTAPI_DVBT2_PROFILE_BASE | Base profile |
| DTAPI_DVBT2_PROFILE_LITE | Lite profile |

# struct DtDemodParsIq

This structure describes the parameters for reception of I/Q samples.

## **Members**

m Bandwidth

Bandwidth in Hz. The valid bandwidth values are: 1700000, 5000000, 6000000, 7000000, 8000000 and 10000000 Hz.

 $m_IqDemodType$ 

The input signal's modulation type.

| Value            | Meaning               |  |
|------------------|-----------------------|--|
| DTAPI_DEMOD_OFDM | OFDM modulated signal |  |
| DTAPI_DEMOD_QAM  | QAM modulated signal  |  |

m SampleRate

Sample rate in Hz.

# struct DtDemodParsIsdbt

This structure describes the demodulation parameters for ISDB-T.

## **Members**

m Bandwidth

Bandwidth.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_ISDBT_BW_5MHZ | 5 MHz   |
| DTAPI_ISDBT_BW_6MHZ | 6 MHz   |
| DTAPI_ISDBT_BW_7MHZ | 7 MHz   |
| DTAPI_ISDBT_BW_8MHZ | 8 MHz   |

#### m SubChannel

Sub-channel number (0 ... 41) of the centre segment of the spectrum. The default is 22.

## m NumberOfSegments

Number of Segments

| Value               | Meaning            |
|---------------------|--------------------|
| DTAPI_ISDBT_SEGM_1  | 1 ISDB-T segment   |
| DTAPI_ISDBT_SEGM_3  | 3 ISDB-T segments  |
| DTAPI_ISDBT_SEGM_13 | 13 ISDB-T segments |

# struct DtDemodParsQam

This structure describes the demodulation parameters for QAM-A, B and C.

#### **Members**

m Annex

ITU-T J.83 Annex.

| Value           | Meaning                       |
|-----------------|-------------------------------|
| DTAPI_MOD_J83_A | J.83 annex A (DVB-C)          |
| DTAPI_MOD_J83_B | J.83 annex B ("American QAM") |
| DTAPI_MOD_J83_C | J.83 annex C ("Japanese QAM") |

## $m_Interleaving$

For J.83 Annex B, this parameter specifies the interleaving mode detected as specified in the table below. For Annex A and C this parameter is not used.

| Value                   | CW   | I   | J  | Burst protection 64-/256-QAM |
|-------------------------|------|-----|----|------------------------------|
| DTAPI_MOD_QAMB_I128_J1D | 0001 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_164_J2   | 0011 | 64  | 2  | 47 μs / 33 μs                |
| DTAPI_MOD_QAMB_I32_J4   | 0101 | 32  | 4  | 24 μs / 16 μs                |
| DTAPI_MOD_QAMB_I16_J8   | 0111 | 16  | 8  | 12 μs / 8.2 μs               |
| DTAPI_MOD_QAMB_I8_J16   | 1001 | 8   | 16 | 5.9 μs / 4.1 μs              |
| DTAPI_MOD_QAMB_I128_J1  | 0000 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_I128_J2  | 0010 | 128 | 2  | 190 μs / 132 μs              |
| DTAPI_MOD_QAMB_I128_J3  | 0100 | 128 | 3  | 285 μs / 198 μs              |
| DTAPI_MOD_QAMB_I128_J4  | 0110 | 128 | 4  | 379 μs / 264 μs              |
| DTAPI_MOD_QAMB_I128_J5  | 1000 | 128 | 5  | 474 μs / 330 μs              |
| DTAPI_MOD_QAMB_I128_J6  | 1010 | 128 | 6  | 569 μs / 396 μs              |
| DTAPI_MOD_QAMB_I128_J7  | 1100 | 128 | 7  | 664 μs / 462 μs              |
| DTAPI_MOD_QAMB_I128_J8  | 1110 | 128 | 8  | 759 μs / 528 μs              |
| DTAPI_MOD_QAMB_IL_AUTO  | -    | -   | -  | Autodetect interleaving mode |
| DTAPI_MOD_QAMB_IL_UNK   | -    | -   | -  | Interleaving mode is unknown |

m\_SymRate

The symbol rate (in bd). The value **DTAPI\_MOD\_SYMRATE\_AUTO** specifies automatic detection of the symbol rate. The value **DTAPI\_MOD\_SYMRATE\_UNK** indicates the symbol rate could not be detected.

## **Remarks**

For DTA-2136 and DTA-2139 J.83 annex A (DVB-C) QAM-128 is not supported

# struct DtDemodPlpBlocks

This structure describes the number of FEC-blocks for DVB-C2/T2 used for the statistic DTAPI\_STAT\_PLP\_BLOCKS.

## **Members**

```
m_NumBlocks
Last plp_num_blocks value.
```

m NumBlocksMin

Minimum plp num blocks value, set to -1 when the statistic is read.

 ${\it m}$  NumBlocksMax

Maximum plp\_num\_blocks value, reset when the statistic is read.

## struct DtDetVidStd

This structure describes the video standard as detected on an input port.

## **Members**

```
m_VidStd
    DTAPI_VIDSTD_XXX, the video standard detected at the input.

m_LinkStd
    DTAPI_VIDLNK_* for video standards with multiple mappings, otherwise -1.

m_LinkNr
    Link number for multi-link standards, otherwise -1.

m_Vpid
    Raw VPID as extracted from the SDI stream.

m_Vpid2
```

For 3G level B signals, the raw VPID as extracted from stream 2.

## struct DtDeviceDesc

This structure describes a DekTec device.

## **Members**

m Category

Code indicating the device category.

| Value         | Meaning  |
|---------------|--|
| DTAPI_CAT_PCI | PCI or PCI-Express device  |
| DTAPI_CAT_USB | USB-2 or USB-3 device  |
| DTAPI_CAT_NW  | Pseudo category that is used to refer to the network aspect of a device. This category value is used for getting the device driver version of the network driver and to refer to network related events. |
| DTAPI_CAT_IP  | Network appliance: DTE-31xx  |
| DTAPI_CAT_NIC | Non-DekTec network card (local NIC)  |

m\_Serial

The serial number that uniquely identifies the device.

```
m PciBusNumber, m SlotNumber
```

For devices in category **DTAPI\_CAT\_PCI**, these integers identify the PCI bus and slot number in which the PCI card is installed. For other categories, the values are undefined.

#### m UsbAddress

For devices in category **DTAPI\_CAT\_USB**, this number identifies the USB address of the device. For other categories, the value is undefined.

#### m TypeNumber

This integer corresponds to the integer in the DekTec type identifier for the device, e.g. 2144 for the DTA-2144.

## m SubType

This integer identifies the subtype of the device.

| Value | Meaning   |
|-------|---|
| -1    | The driver could not establish a value for subtype <sup>1</sup> . |
| 0     | Subtype is not applicable (no suffix to type number)              |
| 1     | The type number is suffixed by 'A'                                |
| 2     | The type number is suffixed by 'B'                                |
| ::    | etc.  |

Example: If m\_TypeNumber is 2137 and m\_SubType is 3, the full type number is DTA-2137C.

#### m DeviceId, m VendorId, m SubsystemId, m SubVendorId

Device ID, Vendor ID, Subsystem ID and Subsystem Vendor ID. Identification information of the device, as read from its PCI configuration-space registers.

#### m NumHwFuncs

Number of hardware functions hosted by the device.

#### m HardwareRevision

Hardware revision of the device, encoded as major hardware revision times 100 plus minor hardware revision. For example, <u>m\_HardwareRevision=102</u> corresponds to hardware revision r1.2, while <u>m\_HardwareRevision=310</u> corresponds to r3.10.

#### m FirmwareVersion

Version number of the firmware loaded in the device.

#### m FirmwareVariant

Variant of the firmware loaded on the device. This is not used in the current set of DekTec devices, but future devices may support multiple variants of the firmware each with different functionality.

#### m NumDtInpChan

Number of input channels available on the device. For devices that have ports that are software programmable as input or output, the maximum number of input channels is used. IP ports count as 1 input channel and 1 output channel.

#### m NumDtOutpChan

Number of output channels available on the device. For devices that have ports that are software programmable as input or output, the maximum number of output channels is used. IP ports count as 1 input channel and 1 output channel.

<sup>&</sup>lt;sup>1</sup> This is an error condition that cannot occur for a correctly working board.

#### m NumPorts

Number of physical ports available on the device. Doubly-buffered outputs count as a single port.

## $m_{\perp}Ip$

For devices in category **DTAPI\_CAT\_IP** and **DTAPI\_CAT\_NIC**, this member identifies the IPv4 address of the device. Otherwise, the value of this member is undefined.

#### m IpV6[3]

For devices in category **DTAPI\_CAT\_IP** and **DTAPI\_CAT\_NIC**, this member identifies the IPv6 addresses of the device (if the device supports IPv6 and IPv6 is enabled). Otherwise, the values of this member are undefined.

#### m Mac

For devices in category **DTAPI\_CAT\_IP** and **DTAPI\_CAT\_NIC**, this member identifies the MAC address of the device. Otherwise, the value of this member is undefined.

# struct DtDolbyDigitalCompleteMetadata

The members in struct DtDolbyMetadataComplete specify the "complete" Dolby metadata.

```
struct DtDolbyDigitalCompleteMetadata
 // Dolby metadata
 int m LtRtCenterMixLevel; // Lt/Rt center mix level
 int m_LoRoSurroundMixLevel; // Lo/Ro surround mix level
 int m_SurroundExMode;  // Dolby surround EX mode
bool m_SurroundAttn;  // 3dB surround attenuation
                // 3dB surround attenuation flag
```

## **Members**

m\_Dynrnge

Enable (default) or disable normal dynamic-range reduction.

m DynRangeCtrl2

Enable or disable (default) large dynamic-range reduction.

## $m_LfeChannel$

Enable or disable (default) the low frequency effects (LFE) channel. This is an optional low frequency channel (<120Hz) intended to be reproduced at a level +10dB with respect to the base audio signal. The LFE channel allows high sound pressure level to be provided for low frequency sounds.

The audio service type (DtEncAudPars::m\_SvcType) determines whether the LFE channel is allowed. At least three channels are required to enable the LFE channel.

| LFE Channel Allowed     | Meaning                             |
|-------------------------|-------------------------------------|
| LFE channel not allowed | SVC_MONO, SVC_STEREO, SVC_DUAL_MONO |
| LFE channel allowed     | SVC_SURROUND_5_1                    |

#### m LfeFilter

Enable or disable (default) the LE low-pass filter (120Hz).

## m\_SurroundDelay

Enable or disable (default) additional delay of the surround channel.

#### m DcFilter

Enable (default) or disable DC filter.

#### m CompChar

Global compression profile.

| Value       | Meaning                     |
|-------------|-----------------------------|
| 0           | No compression.             |
| 1 (default) | Film standard compression.  |
| 2           | Film light compression.     |
| 3           | Music standard compression. |
| 4           | Music light compression.    |
| 5           | Speech compression.         |

## $m_DComp$

Line mode profile.

| Value       | Meaning                     |
|-------------|-----------------------------|
| 0           | No compression.             |
| 1           | Film standard compression.  |
| 2           | Film light compression.     |
| 3           | Music standard compression. |
| 4           | Music light compression.    |
| 5           | Speech compression.         |
| 7 (default) | Unspecified                 |

## $m_D2Comp$

Line mode profile for second channel.

| Value       | Meaning                     |
|-------------|-----------------------------|
| 0           | No compression.             |
| 1           | Film standard compression.  |
| 2           | Film light compression.     |
| 3           | Music standard compression. |
| 4           | Music light compression.    |
| 5           | Speech compression.         |
| 7 (default) | Unspecified                 |

## m C2Comp

RF mode profile for second channel.

| Value       | Meaning                     |
|-------------|-----------------------------|
| 0           | No compression.             |
| 1           | Film standard compression.  |
| 2           | Film light compression.     |
| 3           | Music standard compression. |
| 4           | Music light compression.    |
| 5           | Speech compression.         |
| 7 (default) | Unspecified                 |

## $m_Deemphasis$

Enable or disable (default) digital deemphasis.

## m BwFilter

Enable or disable (default) bandwidth filter.

## m Phase90

Enable (default) or disable 90-degree phase shift for surround.

## m Xbsi2Ex

Enable (default) or disable extended bitstream syntax.

## $m\_HeadphoneMode$

## $m\_AdConvType$

## m MixingLevel

Mixing level in dB. The valid range is 0=80dB through 31=111dB and the default value is 25=105dB.

 $m\_Copyright$ 

m\_OriginalBs

## m\_BitstreamMode

The bitstream mode parameter (Dolby metadata: **bsmod**) describes the audio service contained within the (E-)AC-3 bitstream.

| Value       | Meaning  |
|-------------|--|
| 0 (default) | Main audio service: complete main (CM).  CM flags the bitstream as the main audio service for the program and indicates that all elements are present to form a complete audio program.  Currently, this is the most common default setting. The CM service may contain from one (mono) to six (5.1) channels.   |
| 1           | Main audio service: music and effects (ME).  The bitstream is the main audio service for the program, minus a dialogue channel. The dialogue channel, if any, is intended to be carried by an associated dialogue service. Different dialogue services can be associated with a single ME service to support multiple languages.   |
| 2           | Associated audio service: visually impaired (VI). This is typically a single-channel program intended to provide a narrative description of the picture content to be decoded along with the main audio service. The VI service may also be a complete mix of all program channels, comprising up to six channels.   |
| 3           | Associated audio service: hearing impaired (HI). This is typically a single-channel program intended to convey audio that has been processed for increased intelligibility and decoded along with the main audio service. The HI service may also be a complete mix of all program channels, comprising up to six channels.  |
| 4           | Associated audio service: dialogue (D). This is typically a single-channel program intended to provide a dialogue channel for an ME service. If the ME service contains more than two channels, the D service is limited to only one channel; if the ME service is two channels, the D service can be a stereo pair. The appropriate channels of each service are mixed together. (This requires special decoders.)      |
| 5           | Associated audio service: commentary (C). This is typically a single-channel program intended to convey additional commentary that can be optionally decoded along with the main audio service. This service differs from a dialogue service because it contains an optional, rather than a required, dialogue channel. The C service may also be a complete mix of all program channels, comprising up to six channels. |

| 6 | Associated audio service: emergency (E). This is a single-channel service that is given priority in reproduction. When the E service appears in the bitstream, it is given priority in the decoder and the main service is muted. |
|---|---|
| 7 | Associated audio service: voice over (VO). This is a single-channel service intended to be decoded and mixed to the C channel (requires special decoders).  |

## $m\_Xbsi1Ex$

## m AdvDrc

Value of the "Advanced DRC in use" flag. The default is **false**.

## m\_DownMixMode

Preferred stereo downmix mode.

| Value       | Meaning                  |
|-------------|--------------------------|
| 0           | Not indicated.           |
| 1           | Lt/Rt downmix preferred. |
| 2           | Lo/Ro downmix preferred. |
| 3 (default) | Reserved                 |

## m LtRtCenterMixLevel

## Lt/Rt center mix level.

| Value       | Meaning        |
|-------------|----------------|
| 0           | 1.414 (+3.0dB) |
| 1           | 1.189 (+1.5dB) |
| 2           | 1.000 (0.0dB)  |
| 3           | 0.841 (-1.5dB) |
| 4           | 0.707 (-3.0dB) |
| 5           | 0.595 (-4.5dB) |
| 6           | 0.500 (-6.0dB) |
| 7           | 0.000 (-infdB) |
| 8 (default) | Reserved       |

## ${\it m\_LtRtSurroundMixLevel}$

## Lt/Rt surroundmix level.

| Value       | Meaning        |
|-------------|----------------|
| 3           | 0.841 (-1.5dB) |
| 4           | 0.707 (-3.0dB) |
| 5           | 0.595 (-4.5dB) |
| 6           | 0.500 (-6.0dB) |
| 7           | 0.000 (-infdB) |
| 8 (default) | Reserved       |

## ${\it m\_LoRoCenterMixLevel}$

## Lo/Ro center mix level.

| Value       | Meaning        |
|-------------|----------------|
| 0           | 1.414 (+3.0dB) |
| 1           | 1.189 (+1.5dB) |
| 2           | 1.000 (0.0dB)  |
| 3           | 0.841 (-1.5dB) |
| 4           | 0.707 (-3.0dB) |
| 5           | 0.595 (-4.5dB) |
| 6           | 0.500 (-6.0dB) |
| 7           | 0.000 (-infdB) |
| 8 (default) | Reserved       |

## $m\_LoRoSurroundMixLevel$

## Lt/Rt surroundmix level.

| Value       | Meaning        |
|-------------|----------------|
| 3           | 0.841 (-1.5dB) |
| 4           | 0.707 (-3.0dB) |
| 5           | 0.595 (-4.5dB) |
| 6           | 0.500 (-6.0dB) |
| 7           | 0.000 (-infdB) |
| 8 (default) | Reserved       |

## m\_SurroundExMode

Dolby surround EX mode.

| Value       | Meaning                     |
|-------------|-----------------------------|
| 0           | Not indicated.              |
| 1 (default) | Dolby surround EX disabled. |
| 2           | Dolby surround EX enabled.  |

## $m\_SurroundAttn$

3dB surround attenuation flag.

| Value           | Meaning                            |
|-----------------|------------------------------------|
| false (default) | 3dB surround attenuation disabled. |
| true            | 3dB surround attenuation enabled.  |

## $m\_AudioProdInfo$

Audio production information present yes/no.

| Value           | Meaning                               |
|-----------------|---------------------------------------|
| false (default) | No audio production info present.     |
| true            | Audio production information present. |

# struct DtDriverVersionInfo

This structure specifies the driver version information.

## **Members**

m Category

Device category:

| Value          | Meaning  |
|----------------|--|
| DTAPI_CAT_PCI  | PCI-bus device; version of Dta32, Dta64 or DtPcie64 device driver. |
| DTAPI_CAT_USB  | USB device; version of Dtu32 or Dtu64 device driver.               |
| DTAPI_CAT_NW   | Network device; version of DtaNw32 or DtaNw64 device driver        |
| DTAPI_CAT_NWAP | VLAN device; version of DtaNwAp32 or DtaNwAp64 device<br>driver    |

## $m_Id$

## Driver Identifier:

| Value          | Meaning        |
|----------------|----------------|
| DRV_ID_DTA     | Dta driver     |
| DRV_ID_DTPCIE  | DtPcie driver  |
| DRV_ID_DTU     | Dtu driver     |
| DRV_ID_DTANW   | DtaNw driver   |
| DRV_ID_DTANWAP | DtaNwAp driver |

#### m Name

Driver name string.

## m Major

Major version number of the device driver. This number is incremented for major functional upgrades of the device driver.

## m Minor

The minor version number is incremented for small functional increments of the device driver.

## m BugFix

The bug-fix version number is incremented when a bug in the device driver has been fixed, without further functional enhancements to the driver.

## M Build

Build number.

## **Remarks**

# struct DtDvbC2DemodPlpSigDataPlp

This structure specifies the DVB-C2 layer-1 signalling data for one physical layer pipe (PLP).

## **Members**

m Id

Unique identification of the PLP within a C2 system. The valid range is 0 ... 255.

m FecType

FEC type used by the PLP.

| Value                | Meaning  |
|----------------------|----------|
| DTAPI_DVBC2_LDPC_16K | 16K LDPC |
| DTAPI_DVBC2_LDPC_64K | 64K LDPC |

#### m CodeRate

Convolutional coding rate used by the PLP.

| Value                | Meaning            |
|----------------------|--------------------|
| DTAPI_DVBC2_COD_2_3  | 2/3                |
| DTAPI_DVBC2_COD_3_4  | 3/4                |
| DTAPI_DVBC2_COD_4_5  | 4/5                |
| DTAPI_DVBC2_COD_5_6  | 5/6                |
| DTAPI_DVBC2_COD_8_9  | 8/9 (for 16K FEC)  |
| DTAPI_DVBC2_COD_9_10 | 9/10 (for 64K FEC) |

## $m\_Modulation$

Modulation used by the PLP.

| Value                | Meaning   |
|----------------------|-----------|
| DTAPI_DVBC2_QAM16    | 16-QAM    |
| DTAPI_DVBC2_QAM64    | 64-QAM    |
| DTAPI_DVBC2_QAM256   | 256-QAM   |
| DTAPI_DVBC2_QAM1024  | 1024-QAM  |
| DTAPI_DVBC2_QAM4096  | 4096-QAM  |
| DTAPI_DVBC2_QAM16384 | 16384-QAM |
| DTAPI_DVBC2_QAM65536 | 65536-QAM |

#### m HdrCtr

Header counter field, number of FEC-frames following the FEC-frame header.

| Value | Meaning      |
|-------|--------------|
| 0     | 1 FEC frame  |
| 1     | 2 FEC frames |

## **Remarks**

For type-1 data slices this structure contains the PLP signalling information from the layer-1 part-2 signalling data. For type-2 data slices this structure contains the PLP signalling information from the layer-1 part-1 signalling data (=FEC-frame header).

Unsupported fields are set to **DTAPI\_STAT\_UNSUP\_INTITEM**.

# struct DtDvbC2DemodPlpSigData

This structure specifies the DVB-C2 layer-1 signalling information for the physical layer pipes.

## **Members**

m NumPlps

Specifies the number of physical layer pipes signalled in the DVB-C2 layer-1 signalling data.

m Plps

A vector specifying the DVB-C2 layer-1 signalling data for the physical layer pipes (not necessarily for each detected PLP).

# struct DtDvbC2DemodL1Part2Plp

This structure specifies the DVB-C2 layer-1 part 2 signalling information for one physical layer pipe (PLP).

## **Members**

m Id

Unique identification of the PLP within a C2 system. The valid range is 0 ... 255.

m Bundled

If '1', the associated PLP is bundled with other PLP(s) within the current C2 system. All the bundled PLPs have the same PLP ID.

m Type

PLP type.

| ••                               |                  |
|----------------------------------|------------------|
| Value                            | Meaning          |
| DTAPI_DVBC2_PLP_<br>TYPE_COMMON  | Common PLP       |
| DTAPI_DVBC2_PLP_<br>TYPE_GROUPED | Grouped data PLP |
| DTAPI_DVBC2_PLP_<br>TYPE_NORMAL  | Normal data PLP  |

## m PayloadType

PLP payload type.

| Value                    | Meaning                                |
|--------------------------|--|
| DTAPI_DVBC2_PAYLOAD_GFPS | Generic Fixed-length Packetized Stream |
| DTAPI_DVBC2_PAYLOAD_GCS  | Generic Continuous Stream              |
| DTAPI_DVBC2_PAYLOAD_GSE  | Generic Stream Encapsulation           |
| DTAPI_DVBC2_PAYLOAD_TS   | Transport Stream                       |

 $m\_GroupId$ 

Identifies the PLP group with which the PLP is associated.

 $m_Start$ 

Start position of the first complete XFEC-frame of the PLP. Not set for type 2 data slices.

#### m FecType

FEC type used by the PLP. Not set for type 2 data slices.

| Value                | Meaning  |
|----------------------|----------|
| DTAPI_DVBC2_LDPC_16K | 16K LDPC |
| DTAPI_DVBC2_LDPC_64K | 64K LDPC |

#### m Modulation

Modulation used by the PLP. Not set for type 2 data slices.

| Value                | Meaning   |
|----------------------|-----------|
| DTAPI_DVBC2_QAM16    | 16-QAM    |
| DTAPI_DVBC2_QAM64    | 64-QAM    |
| DTAPI_DVBC2_QAM256   | 256-QAM   |
| DTAPI_DVBC2_QAM1024  | 1024-QAM  |
| DTAPI_DVBC2_QAM4096  | 4096-QAM  |
| DTAPI_DVBC2_QAM16384 | 16384-QAM |
| DTAPI_DVBC2_QAM65536 | 65536-QAM |

## m CodeRate

Convolutional coding rate used by the PLP. Not set for type 2 data slices.

| Value                | Meaning            |
|----------------------|--------------------|
| DTAPI_DVBC2_COD_2_3  | 2/3                |
| DTAPI_DVBC2_COD_3_4  | 3/4                |
| DTAPI_DVBC2_COD_4_5  | 4/5                |
| DTAPI_DVBC2_COD_5_6  | 5/6                |
| DTAPI_DVBC2_COD_8_9  | 8/9 (for 16K FEC)  |
| DTAPI_DVBC2_COD_9_10 | 9/10 (for 64K FEC) |

#### m PsiSiReproc

If '1', indicates that PSI/SI has been reprocessed.

## m\_TsId, m\_OnwId

If  $m_{PSiSiReproc}$  is set to '1', these members specify the transport stream ID and original network ID of the transport stream in the PLP. A receiver will use these fields if it can't rely on the PSI/SI.

## **Remarks**

Unsupported fields are set to **DTAPI\_STAT\_UNSUP\_INTITEM**.

# struct DtDvbC2DemodL1Part2DSlice

This structure specifies the DVB-C2 layer-1 part-2 signalling information for one data slice.

#### **Members**

m Id

Unique identification of the data slice within a C2 system.

## m TunePosition

Tune position of the associated data slice relative to the start frequency of the C2 system, in multiples of pilot carrier spacing.

## m OffsetLeft

Start position of the associated data slice by means of the distance to the left from the tuning position, in multiples of the pilot carrier spacing.

#### m OffsetRight

End position of the associated data slice by means of the distance to the right from the tuning position, in multiples of the pilot carrier spacing.

## m TiDepth

Time interleaving depth within the associated data slice.

| Value                    | Meaning              |
|--------------------------|----------------------|
| DTAPI_DVBC2_TIDEPTH_NONE | No time interleaving |
| DTAPI_DVBC2_TIDEPTH_4    | 4 OFDM symbols       |
| DTAPI_DVBC2_TIDEPTH_8    | 8 OFDM symbols       |
| DTAPI_DVBC2_TIDEPTH_16   | 16 OFDM symbols      |

## $m\_Type$

Data slice type.

| Value                     | Meaning           |
|---------------------------|-------------------|
| DTAPI_DVBC2_DSLICE_TYPE_1 | Data slice type 1 |
| DTAPI_DVBC2_DSLICE_TYPE_2 | Data slice type 2 |

## m FecHdrType

FEC frame header type.

| Value                              | Meaning              |
|------------------------------------|----------------------|
| DTAPI_DVBC2_FECHDR_<br>TYPE_ROBUST | Robust mode          |
| DTAPI_DVBC2_FECHDR_<br>TYPE_HEM    | High efficiency mode |

## m ConstConfig

If '1', indicates that the configuration of the associated data slice shall not change; otherwise, the configuration is assumed to be variable.

## m LeftNotch

If '1', indicates the presence of a left neighboured notch band.

### m NumPlps

Specifies the number of physical layer pipes signalled in the layer 1 signalling part 2 data.

#### m Plps

A vector specifying the DVB-C2 layer 1 signalling part 2 data for the physical layer pipes (not necessarily for each detected PLP).

## **Remarks**

Unsupported fields are set to DTAPI STAT UNSUP INTITEM.

# struct DtDvbC2DemodL1Part2

This structure specifies the DVB-C2 layer-1 part-2 signalling information.

## **Members**

m NetworkId

Network ID. Unique identification of the DVB-C2 network.

m C2SystemId

C2 system ID. Unique identification of a C2 system.

m StartFrequency

Start frequency of the C2 system by means of the distance from 0Hz in multiples of the carrier spacing  $(D_x)$ .  $(D_x=24 \text{ for guard interval } 1/128 \text{ and } D_x=12 \text{ for guard interval } 1/64)$ .

m C2Bandwidth

Bandwidth of the generated signal in multiples of pilot carrier spacing.

m GuardInterval

The guard interval between OFDM symbols.

| Value                | Meaning |
|----------------------|---------|
| DTAPI_DVBC2_GI_1_128 | 1/128   |
| DTAPI_DVBC2_GI_1_64  | 1/64    |

m C2FrameLength

The number of data symbols per C2 frame.

m L1P2ChangeCtr

The value of the L1\_PART2\_CHANGE\_COUNTER field, indicating the number of C2 frames ahead where the configuration will change.

m\_ReservedTone

If '1', indicates one or more reserved tones (carriers) are used.

## $m_NumDSlices$

Specifies the number of data slices signalled in the layer-1 signalling part-2 data.

## m DSlices

A vector specifying the layer-1 signalling part-2 data for the data slices (not necessarily for each detected data slice).

## m NumNotches

Specifies the number of notch bands signalled in the layer-1 signalling part-2 data.

## m Notches

A vector specifying the layer-1 signalling part-2 data for the notches (not necessarily for each detected notch).

## **Remarks**

Unsupported fields are set to DTAPI\_STAT\_UNSUP\_INTITEM.

# struct DtDvbC2NotchPars

This structure specifies a DVB-C2 notch band. It is used in class **DtDvbC2Pars** and in structure **DtDvbC2DemodL1Part2Data**.

## **Members**

m Start

Start position of the notch band relative to the start frequency of the C2 system. The start position is indicated in multiples of the pilot carrier spacing.

The valid range is 0 ... 8191 if the guard interval is 1/128.

The valid range is 0 ... 16383 if the guard interval is 1/64.

m Width

Width of the notch band indicated in multiples of the pilot carrier spacing.

The valid range is 0  $\dots$  255 if the guard interval is 1/128.

The valid range is 0 ... 511 if the guard interval is 1/64.

# struct DtDvbC2StreamSelPars

This structure specifies the criteria to select a PLP from a DVB-C2 stream.

## **Members**

## $m_DSliceId$

Unique identification of the data slice within the DVB-C2 stream. Valid values are: 0 ... 255 and <code>DTAPI\_DVBC2\_DSLICE\_ID\_AUTO</code>. The latter value specifies automatic selection of the data slice. In this case the first PLP is selected.

## m PlpId

Unique identification of the data PLP within the DVB-C2 stream. The valid range is 0 ... 255 and <code>DTAPI\_DVBC2\_PLP\_ID\_AUTO</code>. The latter value specifies automatic selection of the data PLP.

## m CommonPlpId

Unique identification of the common PLP within the DVB-C2 stream. It will be combined with the selected data PLP. The valid values are: 0 ... 255, <code>DTAPI\_DVBC2\_PLP\_ID\_NONE</code> and <code>DTAPI\_DVBC2\_PLP\_ID\_AUTO</code>.

The value DTAPI\_DVBC2\_PLP\_ID\_NONE indicates that no common PLP is selected. The value DTAPI DVBC2\_PLP\_ID\_AUTO indicates automatic selection of the common PLP.

# struct DtDvbCidPars

This structure specifies the DVB channel identification for satellite (DVB-S2) signals, ETSI TS 103 129.

#### **Members**

m Enable

Enable the insertion of DVB channel identification signaling information in the RF-signal.

m GuidHigh

The 32 most significant bits of the DVB channel identification Global Unique Identifier

m GuidLow

The 32 least significant bits of the DVB channel identification Global Unique Identifier

m Content

Map that specifies the DVB channel identification content, according ETSI TS 103 129 table 1. The key in the map is the Content ID. The value stored in the map is the information field. Content ID 0 (carrier ID format) shall have the value 0x0001

# struct DtDvbS2ModCod

This structure specifies a single DVB-S2 MODCOD.

## **Members**

```
m\_ModType The modulation type, e.g. DTAPI_MOD_DVBS2_QPSK m\_CodeRate The code rate, e.g. DTAPI_MOD_1_2
```

# struct DtDvbTStreamSelPars

This structure specifies the selection parameters for a DVB-T transport stream.

```
struct DtDvbTStreamSelPars
{
    // No parameters required
};
```

## **Members**

## **Remarks**

No additional parameters are required to select a DVB-T transport stream. Hierarchical DVB-T demodulation is not supported.

# struct DtDvbTTpsInfo

This structure describes the DVB-T Transmission Parameter Signalling (TPS) information used for the statistic **DTAPI STAT DVBT TPS INFO**.

## **Members**

 $m\_LengthIndicator$ 

TPS length indicator field.

m Constellation

DVB-T constellation pattern.

| Value                | Meaning |
|----------------------|---------|
| DTAPI_MOD_DVBT_QPSK  | QPSK    |
| DTAPI_MOD_DVBT_QAM16 | 16-QAM  |
| DTAPI_MOD_DVBT_QAM64 | 64-QAM  |

## m HpCodeRate, m LpCodeRate

High priority stream and low priority stream code rate.

| DTAPI_MOD_1_2 | Code rate 1/2 |
|---------------|---------------|
| DTAPI_MOD_2_3 | Code rate 2/3 |
| DTAPI_MOD_3_4 | Code rate 3/4 |
| DTAPI_MOD_5_6 | Code rate 5/6 |
| DTAPI_MOD_7_8 | Code rate 7/8 |

#### m Guard

Guard interval.

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_MOD_DVBT_G_1_32 | 1/32    |
| DTAPI_MOD_DVBT_G_1_16 | 1/16    |

| DTAPI_MOD_DVBT_G_1_8 | 1/8 |
|----------------------|-----|
| DTAPI_MOD_DVBT_G_1_4 | 1/4 |

# m\_Interleaving

## Interleaving.

| Value                  | Meaning                       |
|------------------------|-------------------------------|
| DTAPI_MOD_DVBT_INDEPTH | In-depth interleaver (2k, 4k) |
| DTAPI_MOD_DVBT_NATIVE  | Native interleaver            |

## $m\_Mode$

Transmission mode.

| Value             | Meaning         |
|-------------------|-----------------|
| DTAPI_MOD_DVBT_2K | 2k mode         |
| DTAPI_MOD_DVBT_4K | 4k mode (DVB-H) |
| DTAPI_MOD_DVBT_8K | 8k mode         |

## m\_Hierarchy

Hierarchy information.

| Value                          | Meaning          |
|--------------------------------|------------------|
| DTAPI_MOD_DVBT_HARCHY_N<br>ONE | Non hierarchical |
| DTAPI_MOD_DVBT_HARCHY_A 1      | Alpha = 1        |
| DTAPI_MOD_DVBT_HARCHY_A 2      | Alpha = 2        |
| DTAPI_MOD_DVBT_HARCHY_A        | Alpha = 4        |

## $\it m$ CellId

16-bit cell identifier (cell\_id) or -1 if not available.

# m\_HpS48S49, m\_LpS48S49

High priority stream and low priority stream S48 and S49 bits for DVB-H or -1 if not available. The values may be OR-ed together.

| Value                  | Meaning  |
|------------------------|--|
| DTAPI_MOD_DVBT_S48_OFF | Time slicing is not used                         |
| DTAPI_MOD_DVBT_S48     | At least one elementary stream uses Time Slicing |
| DTAPI_MOD_DVBT_S49_OFF | MPE-FEC is not used                              |
| DTAPI_MOD_DVBT_S49     | At least one elementary stream uses MPE-FEC      |

m\_OddS50\_S53, m\_EvenS50\_53
Reserved bits of odd and even frames.

# struct DtDvbT2AuxPars

This structure specifies the DVB-T2 auxiliary stream information from the layer-1 post signalling data.

## **Members**

m AuxStreamType

Type of the current auxiliary stream.

m AuxPrivateConfig

Field for future use for signalling auxiliary streams.

# struct DtDvbT2DemodL1PostPlp

This structure specifies the DVB-T2 layer-1 post signalling information for one physical layer pipe (PLP).

## **Members**

m Id

Unique identification of the PLP within a T2 system.

m Type

PLP type.

| Value                     | Meaning        |
|---------------------------|----------------|
| DTAPI_DVBT2_PLP_TYPE_COMM | Common PLP     |
| DTAPI_DVBT2_PLP_TYPE_1    | Data PLP type1 |
| DTAPI_DVBT2_PLP_TYPE_2    | Data PLP type2 |

## m PayloadType

PLP payload type.

| Value                    | Meaning                                |
|--------------------------|--|
| DTAPI_DVBT2_PAYLOAD_GFPS | Generic Fixed-length Packetized Stream |
| DTAPI_DVBT2_PAYLOAD_GCS  | Generic Continuous Stream              |
| DTAPI_DVBT2_PAYLOAD_GSE  | Generic Stream Encapsulation           |
| DTAPI_DVBT2_PAYLOAD_TS   | Transport Stream                       |

## $m_FfFlag$

FF flag. This parameter is only meaningful for type-1 PLPs in a time-frequency-slicing (TFS) configuration.

## m FirstRfIdx

First TFS RF channel. This parameter is only meaningful for type-1 PLPs in a time-frequency-slicing (TFS) configuration.

## m FirstFrameIdx

First frame index.

## m GroupId

Identifies the PLP group with which the PLP is associated.

#### m CodeRate

Convolutional coding rate used by the PLP.

| Value               | Meaning               |
|---------------------|-----------------------|
| DTAPI_DVBT2_COD_1_2 | 1/2                   |
| DTAPI_DVBT2_COD_3_5 | 3/5                   |
| DTAPI_DVBT2_COD_2_3 | 2/3                   |
| DTAPI_DVBT2_COD_3_4 | 3/4                   |
| DTAPI_DVBT2_COD_4_5 | 4/5, not for T2 lite  |
| DTAPI_DVBT2_COD_5_6 | 4/5, not for T2 lite  |
| DTAPI_DVBT2_COD_1_3 | 1/3, only for T2 lite |
| DTAPI_DVBT2_COD_2_5 | 2/5, only for T2 lite |

#### m Modulation

Modulation used by the PLP.

| Value              | Meaning |
|--------------------|---------|
| DTAPI_DVBT2_BPSK   | BPSK    |
| DTAPI_DVBT2_QPSK   | QPSK    |
| DTAPI_DVBT2_QAM16  | 16-QAM  |
| DTAPI_DVBT2_QAM64  | 64-QAM  |
| DTAPI_DVBT2_QAM256 | 256-QAM |

## m Rotation

If '1', constellation rotation is used, otherwise not.

## $m\_FecType$

FEC type used by the PLP.

| Value                | Meaning                          |
|----------------------|----------------------------------|
| DTAPI_DVBT2_LDPC_16K | 16K LDPC                         |
| DTAPI_DVBT2_LDPC_64K | 64K LDPC; not allowed in T2 lite |

 ${\it m}$  NumBlocks

Maximum number of FEC blocks for this PLP.

m FrameInterval

T2 frame interval for this PLP.

m TimeIlLength

Time-interleaving length.

If  $m\_TimeIlType$  is set to '0', this parameter specifies the number of TI blocks per interleaving frame.

If  $m\_TimeIlType$  is set to '1', this parameter specifies the number of T2 frames to which each interleaving frame is mapped.

m TimeIlType

Type of time interleaving used by the PLP.

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_DVBT2_IL_ONETOONE | One interleaving frame corresponds to one T2 frame      |
| DTAPI_DVBT2_IL_MULTI    | One interleaving frame is carried in multiple T2 frames |

### m InBandAFlag

If '1', the in-band A flag is set and in-band signalling information is inserted in this PLP.

#### m InBandBFlag

If '1', the in-band B flag is set and in-band signalling information is inserted in this PLP. This is only useful if DVB-T2 V1.2.1 is selected.

## m Reserved1

Field reserved for future use. It is sometimes used for bias balancing.

### m PlpMode

Mode used for the current PLP.

| Value                           | Meaning   |
|---------------------------------|---|
| DTAPI_DVBT2_PLP_<br>MODE_NONE   | Not specified, used if DVB-T2 V1.1.1 is selected. |
| DTAPI_DVBT2_PLP_<br>MODE_NORMAL | Normal Mode                                       |
| DTAPI_DVBT2_PLP_<br>MODE_HEM    | High Efficiency Mode                              |

## m Static

If '1', the layer 1 post signalling fields only changes at a superframe boundaries otherwise the fields may change at any time.

### m StaticPadding

If '1', BB-frame padding is not used, otherwise BB-frame padding may be used.

#### Remarks

Unsupported fields are set to DTAPI STAT UNSUP INTITEM.

# struct DtDvbT2RfPars

This structure specifies the DVB-T2 time-frequency-slicing (TFS) RF-channel information from the layer-1 post signalling data.

## **Members**

m RfIdx

The index of this RF-frequency within the loop.

m Frequency

The centre frequency in Hz of the RF channel.

# struct DtDvbT2DemodL1Data

This structure specifies the DVB-T2 layer-1 post signalling data.

```
struct DtDvbT2DemodL1Data
  // P1 information
  struct DtDvbT2DemodL1P1
         bool m_Valid;  // P1 found
int m_FftMode;  // FFT mode (or size)
         } m P1;
  // L1-Pre information
  struct DtDvbT2DemodL1Pre
  {
         bool m_Valid;  // L1-pre found
int m_Type;  // Stream type within the super frame
int m_BwtExt;  // Bandwidth extension
int m_S1;  // S1 field value
int m_S2;  // S2 field value
int m_L1Repetition; // L1 repetition (yes/no)
         int m_GuardInterval; // Guard interval
         int m Papr;  // PAPR reduction mode
         int m L1Modulation; // L1 modulation type
         int m_L1CodeRate;  // L1 code rate
int m_L1FecType;  // L1 FEC type
int m_L1PostSize;  // Size of the L1-post in OFDM cells
         int m L1PostInfoSize; // Size of the L1-post information
         int m_Rotation;  // Constellation rotation (yes/no)
int m_PilotPatern;  // Pilot pattern
         int m TxIdAvailability; // The TX-id
         int m_CellId;  // Cell ID

int m_T2SystemId;  // T2 system ID
         int m NumT2Frames; // Number of T2 frames in a super frame
         int m_NumDataSyms; // Number of data OFDM symbols per T2-frame
int m_RegenFlag; // Regeneration count indicator
int m_L1PostExt; // L1-post extensions (yes/no)
int m_NumRfChans; // Number of RF channels
         int m_CurrentRfIdx; // Current RF channel index
         int m T2Version; // DVB-T2 specification version
         int m L1PostScrambling; // L1-post scrambling
         int m T2BaseLite; // T2-Lite is used in a base profile
  } m L1Pre;
   // L1-Post information
  struct DtDvbT2DemodL1Post
   {
         bool m Valid;
                                    // L1-post found
                                     // Number of PLPs
         int m NumPlps;
         int m NumAux;
                                      // Number of auxiliary streams
         // TFS RF-channel frequencies
          std::vector< DtDvbT2DemodRfPars> m RfChanFeqs;
         int m FefType; // FEF type (if FEF is used)
```

## **Public members**

m P1.m Valid

If true, P1signalling data has been successfully decoded and is valid.

 $m_P1.m_FftMode$ 

The FFT size used for computing OFDM symbols.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_DVBT2_FFT_1K  | 1K FFT  |
| DTAPI_DVBT2_FFT_2K  | 2K FFT  |
| DTAPI_DVBT2_FFT_4K  | 4K FFT  |
| DTAPI_DVBT2_FFT_8K  | 8K FFT  |
| DTAPI_DVBT2_FFT_16K | 16K FFT |
| DTAPI_DVBT2_FFT_32K | 32K FFT |

```
m P1.m Miso
```

If '1', MISO is used otherwise SISO.

m P1.m Fef

If '1', FEF-parts are used.

m P1.m T2Profile

DVB-T2 profile.

| Value                    | Meaning                                      |
|--------------------------|--|
| DTAPI_DVBT2_PROFILE_BASE | Base profile                                 |
| DTAPI_DVBT2_PROFILE_LITE | Lite profile (Requires DVB-T2 version 1.3.1) |

m L1Pre.m Valid

If true, L1-pre signalling data has been successfully decoded and is valid.

m L1Pre.m Type

Stream types carried within the current T2 superframe.

| Value                  | Meaning                                   |
|------------------------|---|
| DTAPI_DVBT2_TYPE_TS    | Transport Stream only                     |
| DTAPI_DVBT2_TYPE_GS    | Generic Stream only                       |
| DTAPI_DVBT2_TYPE_TS_GS | Mixed Transport Stream and Generic Stream |

m\_L1Pre.m\_BwtExt

If '1', the extended carrier mode is used.

 $m\_L1Pre.m\_S1$ 

S1 field.

 $m_L1Pre.m_S2$ 

S2 field.

m L1Pre.m\_L1Repetition

If '1', L1 signalling is provided for the next frame.

 ${\tt m\_L1Pre.m\_GuardInterval}$ 

The guard interval between OFDM symbols.

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_DVBT2_GI_1_128  | 1/128   |
| DTAPI_DVBT2_GI_1_32   | 1/32    |
| DTAPI_DVBT2_GI_1_16   | 1/16    |
| DTAPI_DVBT2_GI_19_256 | 19/256  |
| DTAPI_DVBT2_GI_1_8    | 1/8     |
| DTAPI_DVBT2_GI_19_128 | 19/128  |
| DTAPI_DVBT2_GI_1_4    | 1/4     |

## m L1Pre.m Papr

The peak to average power reduction method.

For DVB-T2 version 1.1.1:

| Value                   | Meaning                                     |
|-------------------------|---|
| DTAPI_DVBT2_PAPR_NONE   | None  |
| DTAPI_DVBT2_PAPR_ACE    | ACE - Active Constellation Extension        |
| DTAPI_DVBT2_PAPR_TR     | TR - Power reduction with reserved carriers |
| DTAPI_DVBT2_PAPR_ACE_TR | ACE and TR                                  |

# For DVB-T2 version 1.2.1 and higher:

| Value                   | Meaning  |
|-------------------------|--|
| DTAPI_DVBT2_PAPR_NONE   | L1-ACE is used and TR is used on P2 symbols only |
| DTAPI_DVBT2_PAPR_ACE    | L1-ACE and ACE only are used                     |
| DTAPI_DVBT2_PAPR_TR     | L1-ACE and TR only are used                      |
| DTAPI_DVBT2_PAPR_ACE_TR | L1-ACE, ACE and TR are used                      |

## $m\_L1Pre.m\_L1Modulation$

The modulation type used for the L1-post signalling block.

| Value             | Meaning |
|-------------------|---------|
| DTAPI_DVBT2_BPSK  | BPSK    |
| DTAPI_DVBT2_QPSK  | QPSK    |
| DTAPI_DVBT2_QAM16 | 16-QAM  |
| DTAPI_DVBT2_QAM64 | 64-QAM  |

#### m L1Pre.m L1CodeRate

Convolutional coding rate used for the L1-post signalling block.

| Value               | Meaning |
|---------------------|---------|
| DTAPI_DVBT2_COD_1_2 | 1/2     |

## m L1Pre.m L1FecType

FEC type used for the L1-post signalling block.

| Value                | Meaning  |
|----------------------|----------|
| DTAPI_DVBT2_LDPC_16K | 16K LDPC |

## m L1Pre.m L1PostSize

Size of the coded and modulated L1-post signalling data block, in OFDM cells.

## $m\_L1Pre.m\_L1PostInfoSize$

Size of the information part of the L1-post signalling data block, in bits, including the extension field, if present, but excluding the CRC.

## m L1Pre.m PilotPattern

The Pilot Pattern used.

| Value            | Meaning |
|------------------|---------|
| DTAPI_DVBT2_PP_1 | PP1     |
| DTAPI_DVBT2_PP_2 | PP2     |
| DTAPI_DVBT2_PP_3 | PP3     |
| DTAPI_DVBT2_PP_4 | PP4     |
| DTAPI_DVBT2_PP_5 | PP5     |
| DTAPI_DVBT2_PP_6 | PP6     |
| DTAPI_DVBT2_PP_7 | PP7     |
| DTAPI_DVBT2_PP_8 | PP8     |

## m L1Pre.m TxIdAvailability

Field for signalling the availability of transmitter identification signals within the current geographic cell.

## m L1Pre.m CellId

Cell ID. Unique identification of a geographic cell in a DVB-T2 network.

m L1Pre.m NetworkId

Network ID. Unique identification of the DVB-T2 network.

m L1Pre.m T2SystemId

T2 system ID. Unique identification of the T2 system.

m L1Pre.m NumT2Frames

The number of T2 frames in a super frame. The valid range is 1 ... 255.

m L1Pre.m NumDataSyms

The number of data OFDM symbols per T2 frame, excluding P1 and P2.

m L1Pre.m RegenFlag

Indicates the number of times the DVB-T2 signal has been regenerated.

m L1Pre.m L1PostExt

If '1', the L1-post extension field is present.

m L1Pre.m NumRfChans

The number of frequencies in the T2 system.

m L1Pre.m CurrentRfIdx

The index of the current RF channel within its TFS structure.

m L1Pre.m T2Version

Version of the DVB-T2 specification.

| Value                     | Meaning       |
|---------------------------|---------------|
| DTAPI_DVBT2_VERSION_1_1_1 | Version 1.1.1 |
| DTAPI_DVBT2_VERSION_1_2_1 | Version 1.2.1 |
| DTAPI_DVBT2_VERSION_1_3_1 | Version 1.3.1 |

m\_L1Pre.m\_L1PostScrambling

If '1', L1-post signalling is scrambled.

m L1Pre.m T2BaseLite

If '1', T2 lite is used in a base profile component.

m L1Post.m Valid

If '1', L1-post signalling data has been successfully decoded and is valid.

m L1Post.m NumSubslices

The number of subslices per T2 frame for type-2 PLPs.

m L1Post.m NumPlps

Indicates the number of physical layer pipes in the T2 system.

m L1Post.m NumAux

Indicates the number of auxiliary streams.

m L1Post.m RfChanFreqs

A vector specifying the TFS RF-channel frequencies.

m L1Post.m FefType

Specifies the FEF type, only if FEF is used (i.e. m\_L1P.m\_Fef='1').

 $m_L1Post.m_FefLength$ 

The length of a FEF-part in number of T-units (= samples), only if FEF is used (i.e.  $m \ L1P.m \ Fef='1'$ ).

 ${\tt m\_L1Post.m\_FefInterval}$ 

The number of T2 frames between two FEF parts, only if FEF is used (i.e.  $m_L1P.m_Fef='1'$ ).

m\_L1Post.m\_Plps

A vector specifying the DVB-T2 L1-post signalling data for the physical layer pipes (not necessarily for each detected PLP).

 $m\_L1Post.m\_AuxPars$ 

A vector specifying the auxiliary signalling information.

## **Remarks**

Unsupported fields are set to DTAPI STAT UNSUP INTITEM.

# struct DtDvbT2ParamInfo

This structure contains the DVB-T2 "derived" parameters which can be computed from the main DVB-T2 parameters. DtDvbT2Pars::GetParamInfo and DtDvbT2Pars::OptimisePlpNumBlocks set the members in this structure.

## **Members**

m TotalCellsPerFrame

Total number of cells per frame.

m L1CellsPerFrame

Total number of cells per frame used for L1 signaling.

The overhead is m L1CellsPerFrame / m TotalCellsPerFrame.

m AuxCellsPerFrame

Total number of auxiliary stream cells per frame. This member is currently only used for Tx signalling if it is enabled.

m BiasBalCellsPerFrame

Total number of L1 bias balancing cells per frame.

m BiasBalCellsMax

Maximum number of L1 bias balancing cells per P2.

m DummyCellsPerFrame

Total number of cells lost per frame. It is computed for the first frame in case no NDP is used. The dummy cells overhead = m DummyCellsPerFrame / m TotalCellsPerFrame.

m SamplesPerFrame

Total number of samples per frame.

# struct DtDvbT2PlpPars

This structure specifies the DVB-T2 modulation parameters for one physical layer pipe (PLP). It is used in class **DtDvbT2Pars**, in an array of structures that specify the parameters for each PLP.

## **Members**

 $m_{_{}}Hem$ 

If true, the PLP uses High Efficiency Mode (HEM); Otherwise Normal Mode (NM) is used.

m Npd

If true, Null Packet Deletion (NPD) is active, otherwise it is not active.

m Issy

ISSY mode.

| Value                  | Meaning                   |
|------------------------|---------------------------|
| DTAPI_DVBT2_ISSY_NONE  | No ISSY field is used     |
| DTAPI_DVBT2_ISSY_SHORT | 2-byte ISSY field is used |
| DTAPI_DVBT2_ISSY_LONG  | 3-byte ISSY field is used |

## m IssyBufs

Value of the ISSY BUFS parameter.

## m IssyTDesign

T-design value for TTO generation. Use 0 to have the modulator choose the value. T-design is defined as the delay (in samples) between the start of the first T2 frame in which the PLP is mapped ( $m\_FirstFrameIdx$ ) and the first output bit of the transport stream.

## m CompensatingDelay

Additional delay (in samples) before the TS data is sent. Use -1 to let the modulator choose the value.

#### m TsRate

Transport stream rate. If 0, the rate is computed from the PLP parameters. This is only possible if no NPD is used.

#### m Id

Unique identification of the PLP within a T2 system. The valid range is 0 ... 255.

## m GroupId

Identifies the PLP group with which the PLP is associated. The valid range is 0 ... 255.

## $m_Type$

PLP type.

| Value                     | Meaning        |
|---------------------------|----------------|
| DTAPI_DVBT2_PLP_TYPE_COMM | Common PLP     |
| DTAPI_DVBT2_PLP_TYPE_1    | Data PLP type1 |
| DTAPI_DVBT2_PLP_TYPE_2    | Data PLP type2 |

## m CodeRate

Convolutional coding rate used by the PLP.

| Value               | Meaning               |
|---------------------|-----------------------|
| DTAPI_DVBT2_COD_1_2 | 1/2                   |
| DTAPI_DVBT2_COD_3_5 | 3/5                   |
| DTAPI_DVBT2_COD_2_3 | 2/3                   |
| DTAPI_DVBT2_COD_3_4 | 3/4                   |
| DTAPI_DVBT2_COD_4_5 | 4/5, not for T2 lite  |
| DTAPI_DVBT2_COD_5_6 | 4/5, not for T2 lite  |
| DTAPI_DVBT2_COD_1_3 | 1/3, only for T2 lite |
| DTAPI_DVBT2_COD_2_5 | 2/5, only for T2 lite |

#### m Modulation

Modulation used by the PLP.

| Value              | Meaning |
|--------------------|---------|
| DTAPI_DVBT2_BPSK   | BPSK    |
| DTAPI_DVBT2_QPSK   | QPSK    |
| DTAPI_DVBT2_QAM16  | 16-QAM  |
| DTAPI_DVBT2_QAM64  | 64-QAM  |
| DTAPI_DVBT2_QAM256 | 256-QAM |

#### m Rotation

If true, constellation rotation is used, otherwise not.

#### m FecType

FEC type used by the PLP.

| Value                | Meaning                          |
|----------------------|----------------------------------|
| DTAPI_DVBT2_LDPC_16K | 16K LDPC                         |
| DTAPI_DVBT2_LDPC_64K | 64K LDPC; not allowed in T2 lite |

#### m FrameInterval

T2-frame interval for this PLP. The valid range is 1 ... 255.

## m FirstFrameIdx

First frame index. The valid range is 0 ... m FrameInterval-1.

## m TimeIlLength

Time interleaving length.

If  $m\_TimeIlType$  is set to '0', this parameter specifies the number of TI-blocks per interleaving frame.

If  $m\_TimeIlType$  is set to '1', this parameter specifies the number of T2 frames to which each interleaving frame is mapped.

The valid range is 0 ... 255.

## $m\_TimeIlType$

Type of time interleaving used by the PLP.

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_DVBT2_IL_ONETOONE | One interleaving frame corresponds to one T2 frame      |
| DTAPI_DVBT2_IL_MULTI    | One interleaving frame is carried in multiple T2 frames |

## m InBandAFlag

If true, the in-band A flag is set and in-band signalling information is inserted in this PLP.

#### m InBandBFlag

If true, the in-band B flag is set and in-band signalling information is inserted in this PLP. This is only useful if DVB-T2 V1.2.1 is selected.

### ${\it m}$ NumBlocks

The maximum number of FEC blocks contained in one interleaving frame for this PLP. The valid range is 0 ... 2047.

## $m_NumOtherPlpInBand$

Number of other PLPs in the in-band signalling.

# m\_OtherPlpInBand[DTAPI\_DVBT2\_NUM\_PLP\_MAX-1]

IDs of the other PLPs in the in-band signalling.

## m FfFlag

FF flag.

This parameters is only meaningful for type-1 PLPs in the TFS case.

## m FirstRfIdx

First TFS RF channel. The valid range is 0 ... Number of RF channels - 1. This parameters is only meaningful for type-1 PLPs in the TFS case.

# struct DtDvbT2StreamSelPars

This structure specifies the criteria to select a PLP from a DVB-T2 stream.

## **Members**

## m PlpId

Unique identification of the data PLP within the DVB-T2 stream. The valid range is 0 ... 255 and <code>DTAPI\_DVBT2\_PLP\_ID\_AUTO</code>. The value <code>DTAPI\_DVBT2\_PLP\_ID\_AUTO</code> specifies automatic selection of the PLP. In this case the first PLP is selected.

#### m CommonPlpId

Unique identification of the common PLP within the DVB-T2 stream. It will be combined with the selected data physical layer pipe. The valid values for <code>m\_CommonPlpId</code> are: 0 ... 255, <code>DTAPI DVBT2 PLP ID NONE</code> and <code>DTAPI DVBT2 PLP ID AUTO</code>.

The value **DTAPI\_DVBT2\_PLP\_ID\_NONE** specifies that no common PLP is used. The value **DTAPI\_DVBT2\_PLP\_ID\_AUTO** specifies automatic selection of the common PLP.

# struct DtEventArgs

This structure contains all information about the occurred event.

## **Members**

m HwCat

Identifies the hardware category:

| Parameter     | Meaning                     |
|---------------|-----------------------------|
| DTAPI_CAT_PCI | PCI or PCI-Express device   |
| DTAPI_CAT_USB | USB-2 or USB-3 device       |
| DTAPI_CAT_NW  | Network device              |
| DTAPI_CAT_IP  | Network appliance: DTE-31xx |
| DTAPI_CAT_NIC | Non-DekTec network card     |

m Serial

Serial number of the device causing the event.

m Value1

Event specific value #1:

| Parameter                  | Meaning                                       |
|----------------------------|---|
| DT_EVENT_VALUE1_POWER_UP   | A device power up has been occurred.          |
| DT_EVENT_VALUE1_POWER_DOWN | A device power down has been occurred.        |
| DT_EVENT_VALUE1_NO_LOCK    | Internal PLLs have not achieved or lost lock. |
| DT_EVENT_VALUE1_LOCKED     | Full clock-lock has been achieved.            |

m Value2

Event specific value #2. This member variable is not used and reserved for future use.

m pContext

Opaque pointer that is passed to DtapiRegisterCallback when subscribing to the event.

# struct DtFractionInt

This structure specifies a precise rational number, expressed as the quotient of two integers.

## **Members**

m Num

Numerator

m Den

Denominator

# struct DtHdmiTxStatus

Structure describing the status of the HDMI output port and connected monitor.

```
struct DtHdmiTxStatus
   bool m_MonDetected;  // True if a monitor is detected
   bool m_SupportYCbCr444; // True if YCbCr 4:4:4 is supported
   bool m SupportYCbCr422; // True if YCbCr 4:2:2 is supported
   bool m SupportBasicAudio; // True if basic audio is supported
   bool m_SupportScDc;  // True if SCDC is supported
bool m_SupportHdr;  // True if HDR is supported
   bool m ColorimetryForced; // True if Colorimetry values are set
   bool m ForceTestPicture; // True if user forced the test picture
   bool m UsingTestPicture; // True if test picture is used
   bool m ForceMonitorDetected; // True if user forced monitor detected
   bool m DisableEdidCheck; // True if EDID will not be used
   bool m DisableHdmiOutput; // True if user disabled HDMI output
   DtHdmiVidStd m UsedVidStd;  // Video standard used
   DtHdmiVidStd m SelectedVidStd; // Video standard selected
   int m SupportedStaticMetadataDescr;
                           // Supported Static Metadata Descriptors
   bool  m SupportMonitorRangeLimits;
                          // True if monitor range limits are set
                        // Maximum pixel rate clock in MHz
// Minimum vertical rate
// Maximum vertical rate
// Minimum horizontal rate
   int m MaxPixelClk;
   int m MinVRate;
   int m MaxVRate;
   int m MinHRate;
   std::vector<DtHdmiVidStd> m MonSupportedVidStd;
                          // Vector of supported video standards
   unsigned int  m StateMask; // Bitfields indicating operating state
```

#### **Members**

m MonDetected

This member is true if a display is detected on the HDMI connector.

m EdidError

This member is true if a fault is detected during the parsing of the EDID(=Extended Display Identification Data) retrieved from the connected display.

#### m SupportHdmi

This member is true if the connected display supports HDMI. A HDMI capable device should have a HDMI Vendor Specific Data Block in the EDID.

## m SupportYCbCr444

This member is true if the connected display supports YCbCr444 as indicated by the CEA extension in the EDID.

#### m SupportYCbCr422

This member is true if the connected display supports YCbCr422 as indicated by the CEA extension in the EDID.

#### m SupportBasicAudio

This member is true if the connected display supports basic audio as indicated by the CEA extension in the EDID.

#### m SupportScDc

This member is true if the connected display supports SCDC(= Status and Control Data Channel) as indicated by the HDMI Forum Vendor Specific Data Block in the EDID.

## m SupportHdr

This member is true if the connected display supports HDR(=High Dynamic Range). A HDR capable display should have a HDR Static Metadata Data Block in the EDID. If true, the *m\_SupportedEotf* and *m\_SupportedStaticMetadataDescr* indicates the HDR types supported by the display.

### m ColorimetryForced

This member is true if a colorimetry values is set with the function

DtAvOutput::SetHdmiColorimetry.

#### m ForceTestPicture

This member indicates the Enable value of the <code>DtAvOutput::ForceHdmiTestPicture</code> function.

### m UsingTestPicture

This member is true if a test picture is displayed at the HDMI output. This can be the case if a video format is put on the output that is not supported by the display or by forcing the test picture using the <code>DtAvOutput::ForceHdmiTestPicture</code> function. If the display only supports 3G, but 12G is played out, no test picture is displayed and only one sub-image is put on the HDMI output. This can be detected by the <code>m\_SelectedVidStd</code> and <code>m\_UsedVidStd</code> members. The <code>m\_SelectedVidStd</code> will be the 12G video standard and the <code>m\_UsedVidStd</code> will be the 3G video standard.

#### m ForceMonitorDetected

This member is always false and only used for debugging purpose.

## m DisableEdidCheck

This member indicates the Disable value of the *DtAvOutput::DisableHdmiEdidCheck* function. The default value is false.

#### m DisableHdmiOutput

This member indicates the Disable value of the <code>DtAvOutput::DisableHdmiOutput</code> function. The default value is false.

#### m UsedVidStd

This member indicates the actual video standard displayed at the HDMI output. This video standard can be different to the video standard played at the SDI output in some cases. See the *m UsingTestPicture* member for details.

## m SelectedVidStd

This member indicates the actual video standard played at the SDI output. This video standard can be different to the video standard played at the HDMI output in some cases. See the  $m\_UsingTestPicture$  member for details.

#### m UsedVidMod

This member indicates the actual video mode used at the HDMI output. This member can be different to the m SelectedVidMod if the display does not support the selected video mode.

## m SelectedVidMod

This member indicates the VidMod selected by the *DtAvOutput::SetHdmiVideoMode* function. The default value is DTAPI HDMI VIDMOD YCBCR 422.

### m SupportedEotf

This member is a bitmask of the Electro-Optical Transfer Functions supported by the attached display. This member is only valid if *m SupportHdr* is true.

| Bit    | Meaning   |
|--------|---|
| 0      | Traditional gamma – SDR Luminance Range support         |
| 1      | Traditional gamma – HDR Luminance Range support         |
| 2      | SMPTE ST 2084 (PQ) support                              |
| 3      | Hybrid Log-Gamma (HLG) based on ITU-R BT.2100-0 support |
| others | Reserved for future use                                 |

## ${\it m\_SupportedStaticMetadataDescr}$

This member is a bitmask of the Static Metadata Descriptors supported by the attached display. This member is only valid if m SupportHdr is true.

| Bit    | Meaning                                 |
|--------|---|
| 0      | Static Metadata Type 1 (e.g. HDR10, PQ) |
| others | Reserved for future use                 |

#### m SupportMonitorRangeLimits

This member is true if the connected display indicates the Display Range Limits in the EDID. Is that case, the m\_MaxPixelClk, m\_MinVRate, m\_MaxVRate, m\_MinHRate, m\_MaxHRate members are valid.

#### m MaxPixelClk

This member indicates the maximal pixel clock [MHz] supported by the display as indicated in the Display Range Limits in the EDID. This member is only valid when  $m\_SupportMonitorRangeLimits$  is true.

#### m MinVRate

This member indicates the minimal vertical rate [Hz] supported by the display as indicated in the Display Range Limits in the EDID. For interlaced formats this is the field rate. This member is only valid when m SupportMonitorRangeLimits is true.

### m MaxVRate

This member indicates the maximal vertical rate [Hz] supported by the display as indicated in the Display Range Limits in the EDID. For interlaced formats this is the field rate. This member is only valid when m SupportMonitorRangeLimits is true.

### m MinHRate

This member indicates the minimal horizontal rate [Hz] supported by the display as indicated in the Display Range Limits in the EDID. This member is only valid when m SupportMonitorRangeLimits is true.

#### m MaxHRate

This member indicates the maximal horizontal rate [Hz] supported by the display as indicated in the Display Range Limits in the EDID. This member is only valid when m SupportMonitorRangeLimits is true.

## ${\it m}$ ${\it MonSupportedVidStd}$

This member contains a list of all supported video standards supported by the display as indicated in the EDID.

#### m StateMask

This member is a bitmask of the state of the HDMI output port. If errors occur during the HDMI port initialization, it will be indicated in this member. Several bits can be active simultaneously.

| Bit | (hex)   | Level | Meaning  |
|-----|---------|-------|--|
| 0   | (0001h) | Info  | Should be active in default operation mode and connected display                                       |
| 1   | (0002h) | Error | SCDC initialization error: Possible error with HDMI cable connection                                   |
| 2   | (0004h) | Error | Error reading EEDID  |
| 3   | (0008h) | Error | Error updating video standard (non-specific error)   |
| 4   | (0010h) | Info  | Display disconnected   |
| 5   | (0020h) | Error | HPD forced: Don't force the hot plug detection. It will not initialize the HDMI output port correctly. |
| 8   | (0100h) | Error | PLL lock timeout   |
| 9   | (0200h) | Error | SCDC TMDS configuration error  |
| 10  | (0400h) | Error | Error initializing HDMI output driver  |
| Oth | er      | Debug | Internal states  |

# struct DtHdmiVidStd

Structure describing the specifying the video standard on the HDMI port.

# **Members**

m VidStd

This member indicates Video standard on the HDMI port

m\_AspectRatio

# Picture Aspect Ratio

| Value         | Meaning              |
|---------------|----------------------|
| DT_AR_UNKNOWN | Unknown aspect ratio |
| DT_AR_4_3     | 4x3                  |
| DT_AR_16_9    | 16x9                 |
| DT_AR_14_9    | 14x9                 |

# struct DtHwFuncDesc

Structure describing a hardware function.

### **Members**

#### m DvcDesc

Device descriptor of the device that hosts this hardware function.

### m ChanType

This member variable identifies the channel type of the hardware function. Channel types **DTAPI\_CHAN\_INPUT** and **DTAPI\_CHAN\_OUTPUT** may be OR-ed together. The channel-object column identifies the channel object that can be attached to this hardware function for interaction with the hardware.

Channel types **DTAPI\_CHAN\_DBLBUF**, **DTAPI\_CHAN\_DISABLED** and **DTAPI\_CHAN\_LOOPTHR** do not have an associated channel object because no direct interaction is possible.

| Value               | Channel Object | Meaning  |
|---------------------|----------------|--|
| DTAPI_CHAN_DISABLED | n.a.           | Channel is disabled  |
| DTAPI_CHAN_INPUT    | DtInpChannel   | Input channel  |
| DTAPI_CHAN_OUTPUT   | DtOutpChannel  | Output channel   |
| DTAPI_CHAN_DBLBUF   | n.a.           | The hardware function is a double-buffered copy of another hardware function |
| DTAPI_CHAN_LOOPTHR  | n.a.           | The hardware function is a loop-through copy of another hardware function    |

For TS-over-IP channels both DTAPI CHAN INPUT and DTAPI CHAN OUTPUT are set.

On the DTA-2137 the hardware function for physical port #2 must be disabled before port #1 is configured for APSK operation. Only physical port #1 can be configured for APSK operation.

## $m_Flags$

Capability flags that provide further information about the hardware function.

The available capabilities are listed in DTAPI.h as DTAPI CAP XXX.

## m\_IndexOnDvc

This integer identifies a specific hardware function when the device hosts multiple hardware functions with the same channel type and stream type.

If the function occurs only once,  $m\_IndexOnDvc = 0$ . If the device supports the function twice, indices are 0 and 1; etc.

m Port

This integer identifies the physical port number associated with this function.

The general rule on PCI cards is that the top-most port is #1, the one below that #2, etc., with the following exceptions:

- The Ethernet port on the DTA-160 and the DTA-2160 is port #4;
- Double-buffered outputs like on the DTA-140 count as a single port.

m Ip

IPv4 address of the hardware function. This field is only valid for functions with capability DTAPI\_CAP\_IP.

m IpV6[3]

Array of IPv6 addresses of the hardware function. This field is only valid for functions with capability **DTAPI\_CAP\_IP**. The array contains the link-local, site-local and global IPv6 addresses associated to the hardware function. If an IPv6 address type is not available, an entry with all 0's is added to the end.

m MacAddr

MAC address of the hardware function. This field is only valid for functions with capability **DTAPI\_CAP\_IP**.

## Remarks

This structure is used by ::DtapiHwFuncScan to return a description of a hardware function.

The channel type of bi-directional ASI/SDI ports is either DTAPI\_CHAN\_INPUT or DTAPI\_CHAN\_OUTPUT. Method DtDevice::SetIoConfig can be used to change the direction. The next time::DtapiHwFuncScan is called, the channel type in the hardware-function descriptor will be updated to reflect the last-programmed direction.

# struct DtlpPars

DtIpPars struct is deprecated. The DtIpPars2 struct is the successor.

The parameters in this structure are used when starting transmission or reception of a TS-over-IP stream to or from a unicast or multicast destination.

The parameters in this structure are used when starting transmission or reception of a TS-over-IP stream to or from a unicast or multicast destination. DtIpPars is also used to read back TS-over-IP parameters using DtIpChannel::GetIpPars.

Both IPv4 and IPv6 are supported, as selected by the DTAPI\_IP\_V4/DTAPI\_IP\_V6 flag in m\_Flags.

**DtIpPars** supports network redundancy (SMPTE 2022-7 "Seamless Protection Switching of SMPTE ST 2022 IP Datagrams") by setting <code>m\_Mode</code> to <code>DTAPI\_IP\_TX\_2022\_7</code> (transmission on two links) or <code>DTAPI\_IP\_RX\_2022\_7</code> (reception from two links). If one of these modes is used, the redundant link parameters have to be specified in the six struct members starting at <code>m\_Ip2</code>. Network redundancy is currently supported only by <code>DekTec's DTA-2162</code> (Dual GigE port card for PCle).

SD-SDI is also supported (SMPTE 2022 5/6) by setting the video standard in the m\_IpProfile member

See the description of the members for more information.

# Members when used for IP reception (Rx)

m Ip (main link), m Ip2 (redundant link)

IP address from which to receive IP packets, specified as 4 bytes for IPv4 and 16 bytes for IPv6. For unicast receive, all bytes can be set to 0. If the IP address is in the multicast range, **DTAPI** automatically joins and drops membership of the multicast group when required. The **DTAPI\_IP\_V4/DTAPI\_IP\_V6** flag in m\_Flags member selects between using the IPv4 and IPv6 protocol.

m\_Port, m\_Port2

Port number on which to receive IP packets. Destination port number 0 is not allowed. When the protocol is RTP, the port number shall be even.

m SrcFltIp, m SrcFltIp2

Source IP address for source-specific multicast.

Relevant only if the IP address is a multicast address. In this case  $m\_SrcFltIp(2)$  can be set to a specific IP address for listening to a single multicast source.

If  $m\_SrcFltIp(2)$  is set to 0.0.0.0 (or 16x 0 for IPv6), any-source multicast is used and the multicast sender may be any IP address.

m\_SrcFltPort, m\_SrcFltPort2

Source-specific multicast: source port number associated with  $m\_SrcFltIp(2)$ .

 $m\_SrcFltPort(2)$  may be set to a specific source port number, or to 0 for accepting IP packets from any source port.

m VlanId, m VlanId2

VLAN identifier (VID) as specified in IEEE 802.1Q. If set to 0, VLAN is not used. If set to a positive integer, only packets with the specified VLAN identifier are received.

m\_VlanPriority, m\_VlanPriority2

Not used for Rx.

m TimeToLive

Not used for Rx.

m NumTpPerTp

Write: Expected number of transport packets stored in one IP packet. This value is used to estimate the receive buffer size. If omitted, a value of 7 is used for the estimation.

Read back: Number of transport packets stored in one IP packet in the incoming stream.

m Protocol

Expected protocol.

Write: Only automatic detection (value **DTAPI\_PROTO\_AUTO)** is allowed.

Read back: Set to the protocol that has been detected.

| Value            | Meaning                         |
|------------------|---------------------------------|
| DTAPI_PROTO_UDP  | UDP                             |
| DTAPI_PROTO_RTP  | RTP                             |
| DTAPI_PROTO_AUTO | Automatically detect UDP or RTP |

m DiffServ

Not used.

### m FecMode

Error-correction mode.

| Value             | Meaning  |
|-------------------|--|
| DTAPI_FEC_DISABLE | Do not apply error correction  |
| DTAPI_FEC_2D      | Apply error correction with the FEC streams received on port numbers $m\_Port+2$ and $m\_Port+4$ |

# m\_FecNumRows, m\_FecNumCols

Write: Expected number of FEC rows and columns in the FEC matrix. These values are used to estimate the receive buffer size. If omitted, a maximal matrix size of 10x10 is used for the estimation when using MPEG-2 packets and 375x4 when using SDI. These values are only used if m FecMode is not DTAPI FEC DISABLE.

Read back: Number of rows and columns in the FEC matrix that has been detected. In SMPTE-2022 these parameters are called D and L respectively.

## m Flags

Control/status flags. In the current version of DTAPI a single flag is supported, selecting between IPv4 and IPv6 addressing.

| Value       | Meaning  |
|-------------|--|
|             | Use the IPv4 protocol. All IP addresses are 4 bytes long. This is the default when neither <code>DTAPI_IP_V4</code> nor <code>DTAPI_IP_V6</code> is specified. |
| DTAPI_IP_V6 | Use the IPv6 protocol. All IP addresses are 16 bytes long.   |

#### m Mode

IP redundancy mode.

| Value              | Meaning   |
|--------------------|---|
| DTAPI_IP_NORMAL    | Normal mode: non-redundant IP reception. The constructor of <b>DtIpPars</b> initializes $m\_Mode$ to this mode, so this is the default.   |
| DTAPI_IP_RX_2022_7 | Receive packets from two IP ports and merge the packets into a single logical stream. This mode is defined by the SMPTE 2022-7 standard. This mode can only be used when the port supports capability CAP_IP_PAIR and has an odd physical port number N. The port will be paired with IP port N+1. The redundant link parameters must have to be valid. The incoming streams on ports N and N+1 must be equal to each other, with the exception of the IP-address fields. Such streams can be generated by e.g. a DTA-2162 in DTAPI_IP_TX_2022_7 mode.  This mode is not supported for IPv6 with the UDP protocol. If |
|                    | using the 2022_7 mode with IPv6 and UDP, unpredictable output is returned to the application. When using IPv6, only the RTP protocol is supported for receive.  |

### m IpProfile

The m\_lpProfile defines the maximal bitrate and the maximal path skew of the expected receiving stream(s). These values are used for receive buffer calculations and for the SMPTE 2022-7 mode. Also the SDI standard (for SMPTE 2022-5/6) can be selected. See the DtlpProfile struct for details.

# Members when used for IP transmission (Tx)

m Ip (main link), m Ip2 (redundant link)

IP destination address that will be used for transmission.  $m\_\mathit{Ip}$  is specified as 4 bytes for IPv4 and 16 bytes for IPv6. The <code>DTAPI\_IP\_V4/DTAPI\_IP\_V6</code> flag in  $m\_\mathit{Flags}$  member selects between using the IPv4 and IPv6 protocol.

m\_Port, m\_Port2

Destination port number. When the protocol is RTP, the port number shall be even.

m SrcFltIp, m SrcFltIp2

Not used for specifying Tx parameters.

Read back: The host's IP address.

m SrcFltPort, m SrcFltPort2

Source port number used for transmission. This member is used only if the **DTAPI\_IP\_TX\_MANSRCPORT** flag in  $m_F Flags$  is set. If the **DTAPI\_IP\_TX\_MANSRCPORT** flag is not set, a free source port is assigned automatically.

Read back: The selected source port number.

m\_VlanId, m\_VlanId2

VLAN identifier (VID) as specified in IEEE 802.1Q. If set to 0, VLAN is not used. If set to a positive integer, the IP packets will be tagged with the specified VLAN identifier.

## m\_VlanPriority, m\_VlanPriority2

Priority value which refers to the IEEE 802.1p Priority Code Point (PCP). It is used in the VLAN header as specified in IEEE 802.1Q.

### m TimeToLive

Time-To-Live (TTL) value to be used for transmission. When  $m_{\_TimeToLive}$  is 0, a default value is used.

#### m NumTpPerIp

Number of Transport Packets (TPs) stored in one IP packet. The valid range is 1...7. This member is not used when the video standard is SDI.

#### m Protocol

Protocol used for encapsulation of transport packets. When using the SDI video standard, only DTAPI PROTO RTP is allowed.

| Value           | Meaning |
|-----------------|---------|
| DTAPI_PROTO_UDP | UDP     |
| DTAPI_PROTO_RTP | RTP     |

#### m DiffServ

Value to be put in the Differentiated Services field (formerly Type Of Service) in the IPv4 header or Traffic Class field in the IPv6 header. The valid range is 0...255. The default value is 0.

| Bits | Field | Meaning                            |
|------|-------|------------------------------------|
| 72   | DSCP  | Differentiated Services Code Point |
| 10   | ECN   | Explicit Congestion Notification   |

#### m FecMode

Error-correction mode.

| Value             | Meaning   |
|-------------------|---|
| DTAPI_FEC_DISABLE | Do not add FEC packets  |
| DTAPI_FEC_2D_M1   | Generate FEC packets as specified in SMPTE-2022. The FEC-<br>packet is inserted exact in the middle of the next 2 TS packets.<br>The FEC packets are NOT BLOCK aligned generated. |
| DTAPI_FEC_2D_M1_B | See DTAPI_FEC_2D_M1. The FEC packets are BLOCK aligned generated.   |
| DTAPI_FEC_2D_M2   | Generate FEC packets as specified in SMPTE-2022. The FEC-<br>packet is inserted exact after the following IP TS packet. The<br>FEC packets are NOT BLOCK aligned generated.       |
| DTAPI_FEC_2D_M2_B | See DTAPI_FEC_2D_M2. The FEC packets are BLOCK aligned generated.   |

## ${\it m\_FecNumRows}$ , ${\it m\_FecNumCols}$

Number of rows and columns in the FEC matrix. In SMPTE-2022 these parameters are called D and L respectively. The DTAPI supports all matrix sizes with the following restriction: L > 0 and D >= 0

# $m_Flags$

# Control/status flags.

| Value                  | Meaning  |
|------------------------|--|
| DTAPI_IP_V4            | Use the IPv4 protocol. All IP addresses are 4 bytes long. This is the default when neither $\mathtt{DTAPI\_IP\_V4}$ nor $\mathtt{DTAPI\_IP\_V6}$ is specified (this is if $m\_Flags$ is 0) |
| DTAPI_IP_V6            | Use the IPv6 protocol. All IP addresses are 16 bytes long.   |
| DTAPI_IP_TX_MANSRCPORT | Use $m\_SrcFltPort$ and $m\_SrcFltPort2$ as the source port for transmitting packets. If this flag is not specified, a free source port is assigned automatically.                         |

## $m\_Mode$

# IP redundancy mode.

| Value              | Meaning   |
|--------------------|---|
| DTAPI_IP_NORMAL    | Normal mode: non-redundant IP transmission. The constructor of $\mathtt{DtIpPars}$ initializes $m\_\mathit{Mode}$ to this mode, so this is the default.   |
| DTAPI_IP_TX_2022_7 | Transmit TS-over-IP packets to two physical IP ports at once. This mode is defined by the SMPTE 2022-7 standard. Both streams will be equal to each other, with the exception of the IP-addressing fields. This mode can only be used when the port supports capability CAP_IP_PAIR and has an odd physical port number N. The redundant link is port N+1. The redundant link parameters must have to be valid. |

# $m\_IpProfile$

If SDI is used for transmitting (SMPTE 2022 5/6) the video standard must be set. See the Dtlp-Profile struct for details.

# struct DtlpPars2

The parameters in this structure are used when starting transmission or reception of a TS-over-IP stream to or from a unicast or multicast destination. DtlpPars2 is also used to read back TS-over-IP parameters using DtlpChannel::GetlpPars.

Both IPv4 and IPv6 are supported, as selected by the DTAPI\_IP\_V4/DTAPI\_IP\_V6 flag in m Flags.

**DtIpPars2** supports network redundancy (SMPTE 2022-7 "Seamless Protection Switching of SMPTE ST 2022 IP Datagrams") by setting <code>m\_Mode</code> to <code>DTAPI\_IP\_TX\_2022\_7</code> (transmission on two links) or <code>DTAPI\_IP\_RX\_2022\_7</code> (reception from two links). If one of these modes is used, the redundant link parameters have to be specified in the six struct members starting at <code>m\_Ip2</code>. Network redundancy is currently supported only by DekTec's DTA-2162 (Dual GigE port card for PCle).

SD-SDI is also supported (SMPTE 2022 5/6) by setting the video standard in the m\_IpProfile member.

See the description of the members for more information.

```
struct DtIpPars2
        // Main link
       unsigned char m_{post} = m_{pos
        unsigned char m Gateway[16]; // New geteway (IPv4/IPv6)
        std::vector<DtIpSrcFlt> m SrcFlt; // Source IP/port filter
       // VLAN priority
       // Redundant link (mode DTAPI IP TX 2022 7, DTAPI IP RX 2022 7 only)
       std::vector<DtIpSrcFlt> m SrcFlt2; // Source IP/port filter
        // VLAN priority
                                                                                         // Time-to-live (TTL) for IP Tx
// #TPs per IP packet
// Protocol: DTAPI_PROTO_UDP/RTP
// Differentiated services
// Error correction mode
// 'D' = #rows in FEC matrix
// 'L' = #columns in FEC matrix
// Control flags
// Redundancy mode
        int m TimeToLive;
       int m_NumTpPerIp;
int m_Protocol;
        int m_DiffServ;
        int m FecMode;
        int m FecNumRows;
       int m_FecNumCols;
        int m Flags;
        int m Mode;
                                                                                                                      // Redundancy mode
       DtIpProfile m IpProfile; // IP stream profile
```

# Members when used for IP reception (Rx)

```
m Ip (main link), m Ip2 (redundant link)
```

IP address from which to receive IP packets, specified as 4 bytes for IPv4 and 16 bytes for IPv6. For unicast receive, all bytes can be set to 0. If the IP address is in the multicast range, **DTAPI** automatically joins and drops membership of the multicast group when required. The

**DTAPI\_IP\_V4/DTAPI\_IP\_V6** flag in m\_Flags member selects between using the IPv4 and IPv6 protocol.

m\_Port, m\_Port2

Port number on which to receive IP packets. Destination port number 0 is not allowed. When the protocol is RTP, the port number shall be even.

m Gateway, m Gateway2

Not used for Rx.

m SrcFlt, m SrcFlt2

A list of source IP addresses and ports for source-specific multicast.

The source IP-address is only relevant if the IP address is a multicast address. In this case  $m\_SrcFlt(2)$  can be set to a specific IP address/port for listening to a single or multiple multicast sources.

If  $m\_SrcFlt.m\_SrcFltIp(2)$  is set to 0.0.0.0 (or  $16x \ 0$  for IPv6), or the list is empty, any-source multicast is used and the multicast sender may be any IP address.

If  $m\_SrcFlt.m\_SrcFltPort(2)$  may be set to a specific source port number, or to 0 for accepting IP packets from any source port.

m VlanId, m VlanId2

VLAN identifier (VID) as specified in IEEE 802.1Q. If set to 0, VLAN is not used. If set to a positive integer, only packets with the specified VLAN identifier are received.

m\_VlanPriority, m\_VlanPriority2

Not used for Rx.

m TimeToLive

Not used for Rx.

m NumTpPerTp

Write: Expected number of transport packets stored in one IP packet. This value is used to estimate the receive buffer size. If omitted, a value of 7 is used for the estimation.

Read back: Number of transport packets stored in one IP packet in the incoming stream.

m Protocol

Expected protocol.

Write: Only automatic detection (value **DTAPI PROTO AUTO)** is allowed.

Read back: Set to the protocol that has been detected.

| Value            | Meaning                         |
|------------------|---------------------------------|
| DTAPI_PROTO_UDP  | UDP                             |
| DTAPI_PROTO_RTP  | RTP                             |
| DTAPI_PROTO_AUTO | Automatically detect UDP or RTP |

m DiffServ

Not used.

### m FecMode

Error-correction mode.

| Value             | Meaning  |
|-------------------|--|
| DTAPI_FEC_DISABLE | Do not apply error correction  |
| DTAPI_FEC_2D      | Apply error correction with the FEC streams received on port numbers $m\_Port+2$ and $m\_Port+4$ |

# m\_FecNumRows, m\_FecNumCols

Write: Expected number of FEC rows and columns in the FEC matrix. These values are used to estimate the receive buffer size. If omitted, a maximal matrix size of 10x10 is used for the estimation when using MPEG-2 packets and 375x4 when using SDI. These values are only used if m FecMode is not DTAPI FEC DISABLE.

Read back: Number of rows and columns in the FEC matrix that has been detected. In SMPTE-2022 these parameters are called D and L respectively.

## m Flags

Control/status flags. In the current version of DTAPI a single flag is supported, selecting between IPv4 and IPv6 addressing.

| Value       | Meaning  |
|-------------|--|
|             | Use the IPv4 protocol. All IP addresses are 4 bytes long. This is the default when neither <code>DTAPI_IP_V4</code> nor <code>DTAPI_IP_V6</code> is specified. |
| DTAPI_IP_V6 | Use the IPv6 protocol. All IP addresses are 16 bytes long.   |

#### m Mode

IP redundancy mode.

| Value              | Meaning   |
|--------------------|---|
| DTAPI_IP_NORMAL    | Normal mode: non-redundant IP reception. The constructor of <b>DtIpPars</b> initializes $m\_Mode$ to this mode, so this is the default.   |
| DTAPI_IP_RX_2022_7 | Receive packets from two IP ports and merge the packets into a single logical stream. This mode is defined by the SMPTE 2022-7 standard. This mode can only be used when the port supports capability CAP_IP_PAIR and has an odd physical port number N. The port will be paired with IP port N+1. The redundant link parameters must have to be valid. The incoming streams on ports N and N+1 must be equal to each other, with the exception of the IP-address fields. Such streams can be generated by e.g. a DTA-2162 in DTAPI_IP_TX_2022_7 mode.  This mode is not supported for IPv6 with the UDP protocol. If |
|                    | using the 2022_7 mode with IPv6 and UDP, unpredictable output is returned to the application. When using IPv6, only the RTP protocol is supported for receive.  |

### m IpProfile

The m\_lpProfile defines the maximal bitrate and the maximal path skew of the expected receiving stream(s). These values are used for receive buffer calculations and for the SMPTE 2022-7 mode. Also the SDI standard (for SMPTE 2022-5/6) can be selected. See the DtlpProfile struct for details.

# Members when used for IP transmission (Tx)

m Ip (main link), m Ip2 (redundant link)

IP destination address that will be used for transmission.  $m\_Ip$  is specified as 4 bytes for IPv4 and 16 bytes for IPv6. The **DTAPI\_IP\_V4/DTAPI\_IP\_V6** flag in  $m\_FIags$  member selects between using the IPv4 and IPv6 protocol.

m Port, m Port2

Destination port number. When the protocol is RTP, the port number shall be even.

m Gateway, m Gateway2

This member can be used to override the default gateway. If not used, the standard default gateway is used as defined at the network interface.

m SrcFlt, m SrcFlt2

This member is only used when specifying the  $\mathtt{DTAPI\_IP\_TX\_MANSRCPORT}$  flag in  $m\_Flags$ . if the  $\mathtt{DTAPI\_IP\_TX\_MANSRCPORT}$  flag in  $m\_Flags$  is set, the port number of the first element is used for the source port for transmission. If the  $\mathtt{DTAPI\_IP\_TX\_MANSRCPORT}$  flag is not set, a free source port is assigned automatically.

Read back: The host's IP address and used source port.

VlanId, m VlanId2

VLAN identifier (VID) as specified in IEEE 802.1Q. If set to 0, VLAN is not used. If set to a positive integer, the IP packets will be tagged with the specified VLAN identifier.

## m\_VlanPriority, m\_VlanPriority2

Priority value which refers to the IEEE 802.1p Priority Code Point (PCP). It is used in the VLAN header as specified in IEEE 802.1Q.

### m TimeToLive

Time-To-Live (TTL) value to be used for transmission. When  $m_{\_TimeToLive}$  is 0, a default value is used.

#### m NumTpPerIp

Number of Transport Packets (TPs) stored in one IP packet. The valid range is 1...7. This member is not used when the video standard is SDI.

#### m Protocol

Protocol used for encapsulation of transport packets. When using the SDI video standard, only DTAPI\_PROTO\_RTP is allowed.

| Value           | Meaning |
|-----------------|---------|
| DTAPI_PROTO_UDP | UDP     |
| DTAPI_PROTO_RTP | RTP     |

#### m DiffServ

Value to be put in the Differentiated Services field (formerly Type Of Service) in the IPv4 header or Traffic Class field in the IPv6 header. The valid range is 0...255. The default value is 0.

| Bits | Field | Meaning                            |
|------|-------|------------------------------------|
| 72   | DSCP  | Differentiated Services Code Point |
| 10   | ECN   | Explicit Congestion Notification   |

#### m FecMode

Error-correction mode.

| Value             | Meaning   |
|-------------------|---|
| DTAPI_FEC_DISABLE | Do not add FEC packets  |
| DTAPI_FEC_2D_M1   | Generate FEC packets as specified in SMPTE-2022. The FEC-<br>packet is inserted exact in the middle of the next 2 TS packets.<br>The FEC packets are NOT BLOCK aligned generated. |
| DTAPI_FEC_2D_M1_B | See DTAPI_FEC_2D_M1. The FEC packets are BLOCK aligned generated.   |
| DTAPI_FEC_2D_M2   | Generate FEC packets as specified in SMPTE-2022. The FEC-<br>packet is inserted exact after the following IP TS packet. The<br>FEC packets are NOT BLOCK aligned generated.       |
| DTAPI_FEC_2D_M2_B | See DTAPI_FEC_2D_M2. The FEC packets are BLOCK aligned generated.   |

# ${\it m\_FecNumRows, m\_FecNumCols}$

Number of rows and columns in the FEC matrix. In SMPTE-2022 these parameters are called D and L respectively. The DTAPI supports all matrix sizes with the following restriction: L > 0 and D >= 0

# $m_Flags$

# Control/status flags.

| Value                  | Meaning  |
|------------------------|--|
| DTAPI_IP_V4            | Use the IPv4 protocol. All IP addresses are 4 bytes long. This is the default when neither $\mathtt{DTAPI\_IP\_V4}$ nor $\mathtt{DTAPI\_IP\_V6}$ is specified (this is if $m\_Flags$ is 0) |
| DTAPI_IP_V6            | Use the IPv6 protocol. All IP addresses are 16 bytes long.   |
| DTAPI_IP_TX_MANSRCPORT | Use $m\_SrcFltPort$ and $m\_SrcFltPort2$ as the source port for transmitting packets. If this flag is not specified, a free source port is assigned automatically.                         |

## $m\_Mode$

# IP redundancy mode.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_IP_NORMAL    | Normal mode: non-redundant IP transmission. The constructor of $DtlpPars$ initializes $m\_Mode$ to this mode, so this is the default.  |
| DTAPI_IP_TX_2022_7 | Transmit TS-over-IP packets to two physical IP ports at once. This mode is defined by the SMPTE 2022-7 standard. Both streams will be equal to each other, with the exception of the IP-addressing fields.  This mode can only be used when the port supports capability CAP_IP_PAIR and has an odd physical port number N. The redundant link is port N+1. The redundant link parameters must have to be valid. |

# $m\_IpProfile$

If SDI is used for transmitting (SMPTE 2022 5/6) the video standard must be set. See the Dtlp-Profile struct for details.

# struct DtlpProfile

This structure describes the IP transmission "profile". It defines the maximum bitrate and (in SMPTE 2022-7 mode) the maximal skew between path 1 (main link) and path 2(redundant link). These values are only used for IP receive.

The m\_VideoStandard member must be set for IP transmit and IP receive or use the default value.

This structure is contained in the DtlpPars structure.

#### Members

m Profile

Defines the IP transmission profile. It sets the maximal bitrate and maximal skew using a predefined or user defined profile.

| Value                      | Meaning  |                      |
|----------------------------|--|----------------------|
| DTAPI_IP_PROF_NOT_DEFINED  | No profile defined. This is the default. The DTAPI default values are used as follows:  m_MaxSkew=50ms  m_MaxBitrate = 270Mbps |                      |
| DTAPI_IP_USER_DEFINED      | The profile is defined by the m_MaxSkew and m_MaxBitrate members of the DtlpProfile struct.                                    |                      |
| DTAPI_IP_LBR_LOW_SKEW      | m_MaxSkew=10ms,<br>m_MaxBitrate = 10Mbps   |                      |
| DTAPI_IP_LBR_MODERATE_SKEW | m_MaxSkew=50ms,<br>m_MaxBitrate = 10Mbps   | Low bitrate profile  |
| DTAPI_IP_LBR_HIGH_SKEW     | m_MaxSkew=450ms,<br>m_MaxBitrate = 10Mbps  |                      |
| DTAPI_IP_SBR_LOW_SKEW      | m_MaxSkew=10ms,<br>m_MaxBitrate = 270Mbps  |                      |
| DTAPI_IP_SBR_MODERATE_SKEW | m_MaxSkew=50ms,<br>m_MaxBitrate = 270Mbps  | Slow bitrate profile |
| DTAPI_IP_SBR_HIGH_SKEW     | m_MaxSkew=450ms,<br>m_MaxBitrate = 270Mbps   |                      |
| DTAPI_IP_HBR_LOW_SKEW      | m_MaxSkew=10ms,<br>m_MaxBitrate = 3Gbps  |                      |
| DTAPI_IP_HBR_MODERATE_SKEW | m_MaxSkew=50ms,<br>m_MaxBitrate = 3Gbps  | High bitrate profile |
| DTAPI_IP_HBR_HIGH_SKEW     | m_MaxSkew=450ms,<br>m_MaxBitrate = 3Gbps   |                      |

### Note:

- 1) The m\_MaxBitrate will be truncated to the maximal physical link speed a card can handle. For the DTA-160, DTA-2160 and DTA-2162 this value will be truncated to maximal 1Gbps.
- 2) The DtInpChannel::SetFifoSize function overrules the m\_MaxBitrate in the above table for the buffer size calculation of the SDI/TS packet buffer.

#### m MaxBitrate

This value indicates the maximal expected bitrate of the receiving stream in bps. It's used to calculate the receive buffer size.

### m MaxSkew

The m\_MaxSkew is the maximal expected difference over time in arrival time between IP packets of path 1 (main link) compared to the IP packets of path 2 (redundant link). In SMPTE 2022-7 this is defined as PD. The skew is in milliseconds.

### m VideoStandard

Set/get the video standard for transmit and receive. The default value is DTAPI\_VIDSTD\_TS. The IP-port supports the following video standards:

| Value                | Meaning  | Supported SMPTE standard                     |
|----------------------|--|--|
| DTAPI_VIDSTD_TS      | Transmitting MPEG-2 transport stream data over IP                          | SMPTE-2022-1<br>SMPTE-2022-2<br>SMPTE-2022-7 |
| DTAPI_VIDSTD_525     | Transmitting 10-bit, 525 lines, full<br>SDI frames over IP                 | SMPTE-2022- 5                                |
| DTAPI_VIDSTD_625     | Transmitting 10-bit, 625 lines, full<br>SDI frames over IP                 | SMPTE-2022- 6<br>SMPTE-2022- 7               |
| DTAPI_VIDSTD_UNKNOWN | Video standard is unknown. No IP packets received or unknown video format. |  |

# struct DtlpQosStat

This structure contains additional IP statistic counters that are calculated by the driver. This structure is contained in the DtlpStat structure. All counters are measured over a time period of one second and one minute. The counters can be retrieved by the m\_QosStatsLastSec and m\_QosStatsLastMin members of the DtlpStat structure.

If the "Seamless Protection Switching" mode is active (SMPTE 2022-7) counters are maintained for path 1(main link), path 2(redundant link) and the resulting stream. If the SMPTE 2022-7 mode is inactive, only the main link counters are valid.

```
struct DtIpQosStat
                            // Packet Error Rate of reconstructed stream
  double m PerAfterFec;
                             // Min. skew between path 1 and path 2
  double m MinSkew;
  double m MaxSkew;
                             // Max. skew between path 1 and path 2
  // Main link
  double m Per1;
                             // Packet Error Rate path 1
  double m DelayFactor1;
                             // Delay factor path 1
  double m MinIpat1;
                             // Min. Inter Packet Arrival Time path 1
  double m MaxIpat1;
                             // Max. Inter Packet Arrival Time path 1
  // Redundant link
  double m Per2;
                             // Packet Error Rate path 2
  double m DelayFactor2;
                            // Delay factor path 2
  double m MinIpat2;
                             // Min. Inter Packet Arrival Time path 2
  double m MaxIpat2;
                             // Max. Inter Packet Arrival Time path 2
```

### **Members**

```
m Per1, m Per2, m PerAfterFec
```

Packet Error Rate for the main link (m\_Per1), redundant link (m\_Per2) and the resulting stream (m\_PerAfterFec).

```
m MinSkew, m MaxSkew
```

The skew is the minimal (m\_MinSkew) and maximal (m\_MaxSkew) difference over time in arrival time between IP packets of the main link compared to the IP packets of the redundant link. If the skew is positive, the main link has a longer delay than the redundant link. If the skew is negative the redundant link has a longer delay. Note: PD as defined in SMPTE 2022-7 is the absolute value of the skew. The skew is measured in milliseconds.

```
m_DelayFactor1(main link), m_DelayFactor2(redundant link)
```

Delay Factor in microseconds. The delay factor is an indication of the jitter of the IP stream. It is defined as the maximum difference between the actual arrival time of a UDP/RTP packet and the ideal (jitterless) arrival time of that packet.

```
m MinIpat1(main link), m MinIpat2(redundant link)
```

Minimal "Inter Packet Arrival Time" of two consecutive IP packets in milliseconds.

m\_MaxIpat1(main link), m\_MaxIpat2(redundant link)

Maximal "Inter Packet Arrival Time" of two consecutive IP packets in milliseconds.

# struct DtlpStat

Structure with IP statistics calculated by the driver. If the "Seamless Protection Switching" mode is active (SMPTE 2022-7) counters are maintained for path 1(main link), path 2(redundant link) and the resulting stream. If this mode is inactive, only path 1 values are valid.

Note: The packet counters are not reset after read and a counter wrap must be handled by the application.

```
struct DtIpStat
 unsigned int m TotNumIpPackets;
                                // #IP packets stream
 unsigned int m LostIpPacketsBeforeFec;// #lost IP packets before FEC
 unsigned int m LostIpPacketsAfterFec; // #lost IP packets after FEC
 // Main link
 unsigned int m NumIpPacketsReceived1; // #IP packets received path 1
 // Redundant link
 unsigned int m NumIpPacketsReceived2; // #IP packets received path 2
 unsigned int m NumIpPacketsLost2;
                               // #IP packets lost path 2
 // QOS statistics per second
                               // QOS statistics per minute
```

## **Members**

m TotNumIpPackets

Total number of IP packets that the stream should contain. Lost packets are included in this counter.

m LostIpPacketsBeforeFec

Number of IP packets lost before FEC reconstruction.

m LostIpPacketsAfterFec

Number of IP packets lost after FEC reconstruction.

- m\_NumIpPacketsReceived1 (main link), m\_NumIpPacketsReceived2 (redundant link)
  Number of IP packets received. Lost IP packets are not included in this counter.
- m\_NumIpPacketsLost1(main link), m\_NumIpPacketsLost2(redundant link)
  Number of IP packets lost.
- m QosStatsLastSec, m QosStatsLastMin

Quality Of Service statistics calculated by the driver. These statistics are calculated over the last second(m\_QosStatsLastSec) and over the last minute(m\_QosStatsLastMin). See the DtlpQosStats structure for details.

# struct DtlsdbsLayerPars

This structure specifies the ISDB-S modulation for one hierarchical layer. This structure is used in class DtIsdbsPars, in an array of four structures for layer 1...4.

### **Members**

m NumSlots

The number of slots per frame used for this hierarchical layer.

 $m \; ModCod$ 

Modulation type used for this hierarchical layer.

| Value                            | Meaning                |
|----------------------------------|------------------------|
| DTAPI_ISDBS_MODCOD_<br>BPSK_1_2  | BPSK 1/2               |
| DTAPI_ISDBS_MODCOD_<br>QPSK_1_2  | QPSK 1/2               |
| DTAPI_ISDBS_MODCOD_<br>QPSK_2_3  | QPSK 2/3               |
| DTAPI_ISDBS_MODCOD_<br>QPSK_3_4  | QPSK 3/4               |
| DTAPI_ISDBS_MODCOD_<br>QPSK_5_6  | QPSK 5/6               |
| DTAPI_ISDBS_MODCOD_<br>QPSK_7_8  | QPSK 7/8               |
| DTAPI_ISDBS_MODCOD_<br>8PSK_2_3  | 8PSK 2/3               |
| DTAPI_ISDBS_MODCOD_<br>NOT_ALLOC | This layer is not used |

# struct DtlsdbtLayerData

This structure specifies the ISDB-T modulation parameters for one hierarchical layer. It is used in class DtIsdbtParamData used for the statistic DTAPI\_STAT\_ISDBT\_PARSDATA.

## **Members**

 $m_NumSegments$ 

Number of segments used in this layer.

m Modulation

Modulation type applied to the segments in this layer.

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_ISDBT_MOD_DQPSK | DQPSK   |
| DTAPI_ISDBT_MOD_QPSK  | QPSK    |
| DTAPI_ISDBT_MOD_QAM16 | 16-QAM  |
| DTAPI_ISDBT_MOD_QAM64 | 64-QAM  |

# m CodeRate

Convolutional coding rate applied to the segments in this layer.

| Value                | Meaning |
|----------------------|---------|
| DTAPI_ISDBT_RATE_1_2 | 1/2     |
| DTAPI_ISDBT_RATE_2_3 | 2/3     |
| DTAPI_ISDBT_RATE_3_4 | 3/4     |
| DTAPI_ISDBT_RATE_5_6 | 5/6     |
| DTAPI_ISDBT_RATE_7_8 | 7/8     |

# ${\it m\_TimeInterleave}$

Encoded length of time interleaving.

The table below defines the mapping of  $m\_TimeInterleave$  to parameter I in the time-interleaving process.

| Value | Mode 1 | Mode 2 | Mode 3 |
|-------|--------|--------|--------|
| 0     | 0      | 0      | 0      |
| 1     | 4      | 2      | 1      |
| 2     | 8      | 4      | 2      |
| 3     | 16     | 8      | 4      |

# struct DtlsdbtLayerPars

This structure specifies the ISDB-T modulation parameters for one hierarchical layer. It is used in class DtIsdbtPars, in an array of three structures for layer A, B and C.

### **Members**

 $m_NumSegments$ 

Number of segments used in this layer.

m Modulation

Modulation type applied to the segments in this layer.

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_ISDBT_MOD_DQPSK | DQPSK   |
| DTAPI_ISDBT_MOD_QPSK  | QPSK    |
| DTAPI_ISDBT_MOD_QAM16 | 16-QAM  |
| DTAPI_ISDBT_MOD_QAM64 | 64-QAM  |

## m\_CodeRate

Convolutional coding rate applied to the segments in this layer.

| Value                | Meaning |
|----------------------|---------|
| DTAPI_ISDBT_RATE_1_2 | 1/2     |
| DTAPI_ISDBT_RATE_2_3 | 2/3     |
| DTAPI_ISDBT_RATE_3_4 | 3/4     |
| DTAPI_ISDBT_RATE_5_6 | 5/6     |
| DTAPI_ISDBT_RATE_7_8 | 7/8     |

## ${\it m\_TimeInterleave}$

Encoded length of time interleaving.

The table below defines the mapping of  $m\_TimeInterleave$  to parameter I in the time-interleaving process.

| Value | Mode 1 | Mode 2 | Mode 3 |
|-------|--------|--------|--------|
| 0     | 0      | 0      | 0      |
| 1     | 4      | 2      | 1      |
| 2     | 8      | 4      | 2      |
| 3     | 16     | 8      | 4      |

### m BitRate

Bit rate in bits-per-second, assuming this is a 6-MHz channel. This is a "derived" parameter, which is set to a value by calling DtIsdbtPars::ComputeRates.

## **Remarks**

The ISDB-T modulator uses the sum of  $m_NumSegments$  over layer A/B/C to set the total number of segments. This enables the usage of broadcast type **BTYPE\_TV** for 1-segment modulation.

# struct DtlsdbtParamData

This structure specifies the ISDB-T modulation parameters. It is used in class DtIsdbtParamData used for the statistic DTAPI STAT ISDBT PARSDATA.

#### **Public Members**

m BType

Broadcast type.

| Value                  | Meaning   |
|------------------------|---|
| DTAPI_ISDBT_BTYPE_TV   | TV broadcast; Can be used with any number of segments |
| DTAPI_ISDBT_BTYPE_RAD1 | 1-segment radio broadcast; Total #segments must be 1  |
| DTAPI_ISDBT_BTYPE_RAD3 | 3-segment radio broadcast; Total #segments must be 3  |

m Mode

Transmission mode.

| Value | Meaning    |
|-------|------------|
| 1     | Mode 1: 2k |
| 2     | Mode 2: 4k |
| 3     | Mode 3: 8k |

m Guard

Guard-interval length.

| Value                  | Meaning |
|------------------------|---------|
| DTAPI_ISDBT_GUARD_1_32 | 1/32    |
| DTAPI_ISDBT_GUARD_1_16 | 1/16    |
| DTAPI_ISDBT_GUARD_1_8  | 1/8     |
| DTAPI_ISDBT_GUARD_1_4  | 1/4     |

m PartialRx

Flag that indicates whether layer A is used for partial reception: 0 = no partial reception, 1 = partial reception on.

m LayerPars

Modulation parameters for hierarchical layers A (element 0), B (1) and C (2).

# Remarks

# struct DtlsdbtStreamSelPars

This structure specifies the selection parameters for an ISDB-T stream.

```
struct DtIsdbtStreamSelPars
{
    // Empty
};
```

## **Members**

DtIsdbtStreamSelPars structure has no members

### Remark

All layers are selected and output the same stream

# struct DtPar

This is a generic structure to represent a single parameter setting. It is used for setting and retrieving parameter settings.

## **Members**

m Result

If the user queries one or more parameters with GetPar, this member is used to return the result code for retrieving the parameter.

### m ParId

Identifies the parameter:

| Parameter                | Туре | Meaning   |
|--------------------------|------|---|
| DTAPI_PAR_DEMOD_THREADS  | int  | Number of threads used for the software demodulation; The default value is 4.                                     |
| DTAPI_PAR_DEMOD_LDPC_MAX | int  | Maximum number of iterations for ATSC 3.0/DVB-C2/T2 LDCP-error correction; The default value is 50.               |
| DTAPI_PAR_DEMOD_LDPC_AVG | int  | Limit for the average number of iterations for ATSC 3.0/DVB-C2/T2 LDPC-error correction; The default value is 16. |
| DTAPI_PAR_DEMOD_MER_ENA  | bool | Enable (true) or disable MER calculation; The default value is 'true'.  |

## m IdXtra[4]

Extra identification parameters. Not yet used.

#### m ValueType

Identifies the type of the value according to the following table:

| Value            | Meaning                    |  |
|------------------|----------------------------|--|
| PAR_VT_BOOL      | The value type is bool     |  |
| PAR_VT_DOUBLE    | The value type is double   |  |
| PAR_VT_INT       | The value type is int      |  |
| PAR_VT_UNDEFINED | The value is not valid yet |  |

# struct DtRawlpHeader

Structure placed in front of all IP Packets in receive mode DTAPI\_RXMODE\_IPRAW.

## **Members**

 $m_{_{}}Tag$ 

16-bit tag that marks the beginning of a **DtRawIpHeader** structure. The value of this field is fixed to: 0x44A0.

m Length

16-bit integer that indicates the number of bytes (i.e. size of the IP packet) following directly after the DtRawIpHeader structure.

m TimeStamp

A 32-bit timestamp, taken from the internal 54-MHz system clock on the device, indicating the arrival time of the IP packet following this structure.

# struct DtRdd6Data

Structure describing the Dolby metadata formatted in compliance with SMPTE 2020-1 Format of Audio Metadata and Description of the Asynchronous Serial Bitstream Transport and RDD 6 Description and Guide to the Use of the Dolby E Audio Metadata Serial Bitstream.

```
struct DtRdd6Data
{
   int    m_FirstChannelIndex;
   bool    m_DECompleteValid;
   DtDolbyECompleteMetadata    m_DEComplete;
   bool    m_DEEssentialValid;
   DtDolbyEEssentialMetadata    m_DEEssential;
   bool    m_DDCompleteValid;
   DtDolbyDigitalCompleteMetadata    m_DDComplete;
   bool    m_DDEssentialValid;
   DtDolbyDigitalEssentialMetadata    m_DDEssential;
};
```

#### **Members**

```
m FirstChannelIdx
  Derived from ST2020 SDID. Can be -1 for unknown
m DECompleteValid
  The Dolby E Complete metadata is valid.
m DEComplete
  The Dolby E Complete metadata.
m DEEssentialValid
  The Dolby E Essential metadata is valid.
m DEEssential
  The Dolby E Essential metadata.
m DDCompleteValid
  The Dolby Digital Complete metadata is valid.
m DDComplete
  The Dolby Digital Complete metadata.
m DDEssentialValid
  The Dolby Digital Essential metadata is valid.
m DDEssential
  The Dolby Digital Essential metadata.
```

# struct DtRfLevel

Structure describing a RF-level for a specific frequency. Used by **DtInpChannel::SpectrumScan** to return the RF levels found by scanning a frequency band.

### **Members**

m FreqHz

The center frequency of the found RF level.

m RfLevel

RF level found in units of 0.1 dBmV.

# struct DtRsDecStats

This structure specifies the Reed-Solomon decoder statistics used for the statistic DTAPI STAT RSDEC STATS.

### **Members**

m Locked

Indication whether the Reed-Solomon decoder is locked.

m BytesSkipCount

The total number of bytes skipped while looking for synchronisation.

m PacketCount

The total number of decoded transport stream packets.

m UncorrPacketCount

The total number of uncorrected transport stream packets.

m ByteErrorCount

The byte error count before Reed-Solomon.

m BitErrorCount

The bit error count before Reed-Solomon.

# struct DtSdilpFrameStat

Structure placed in front of all SDI frames in receive mode when using the option **DTAPI RXMODE SDI STAT** and SDI over IP

### **Members**

m FrameCount

SDI framecounter as defined in the SMPTE-2022-6 specification. Only the lower 8 bits are used.

m Timestamp

This is the RTP timestamp of the first IP packets contained in the SDI frame.

m MinIpat

Minimal Inter Packet Arrival time of all IP packets contained in the SDI frame. This value is in 54MHz units.

m MaxIpat

Maximal Inter Packet Arrival time of all IP packets contained in the SDI frame. This value is in 54MHz units.

 $m\_Reserved1$ ,  $m\_Reserved2$ 

Reserved for future use.

# struct DtTransmitter

This structure describes a transmitter. Used by **DtInpChannel::BlindScan** to return the transmitters found by scanning a frequency band.

#### **Members**

FreqHz

Centre frequency of the transmitter in Hertz.

ModType

Type of modulation used in the transmitted signal. See DtInpChannel::GetDemodControl, section Modulation Types, for a list of applicable values.

SymbolRate

The symbol rate of the transmitted signal.

# struct DtSpsProgress

This structure describes the progress of an asynchronous spectrum scan. Used by DtInpChannel::SpectrumScan to return the current state and RF levels found by scanning a frequency band using the DtSpsProgressFunc callback.

#### **Members**

m DtRfLevel

The RF level found on a frequency.

m\_ProgressEvent

Enumeration defining the type of progress event.

| Value         | Meaning   |
|---------------|---|
| SPS_STEP      | One frequency step is completed   |
| SPS_CANCELLED | The spectrum scan is cancelled due to execution of DtInpChannel::CancelSpectrumscan or due to execution of a tuning function. |
| SPS_DONE      | The spectrum scan is completed  |

m Result

The result code of the spectrum scan.

# struct DtT2MiStreamSelPars

This structure specifies the selection parameters for a T2-MI transport stream containing a complete DVB-T2 stream.

#### **Members**

m T2MiOutPid

Specifies the PID carrying the T2-MI packet data. The valid range is 0 ... 8190.

m T2MiTsRate

Specifies the T2-MI transport-stream rate in bits per second. If set to '-1' a variable bitrate transport stream is created, else null packets are added to reach the specified rate. The maximum rate is 72 Mbps.

In case the specified transport-stream rate is too low, T2-MI overflows occur. The number of overflows can be retrieved using the **DTAPI\_STAT\_T2MI\_OVFS** statistic.

#### **Remarks**

T2-MI transport stream selection cannot be combined with DVB-T2 stream (PLP) selection.

# struct DtVitDecStats

This structure specifies the Viterbi decoder statistics used for the statistic **DTAPI\_STAT\_VITDEC\_STATS**.

## **Members**

m BitCount

The total number of decoded bits.

m BitErrorCount

The bit error count before Viterbi.

### **Callback functions**

# **DtBsProgressFunc**

Prototype of a callback function to be supplied by the user with the asynchronous **DtInpChannel::BlindScan** method. This callback function is invoked when a blind scan specific event has occurred.

#### **Parameters**

Progress

See DtBsProgress for a list of applicable values.

p0paque

Opaque pointer that was passed in the DtInpChannel::BlindscanScan method.

#### Remarks

The callback function may not block and the amount of processing should be kept as low as possible to avoid stalling the **DTAPI** or driver. In case significant processing time is required the data should be written to a temporary buffer and be processed in another thread.

# **DtSpsProgressFunc**

Prototype of a callback function to be supplied by the user with DtInpChannel::SpectrumScan. This callback function is invoked when a spectrum scan specific event has occurred.

#### **Parameters**

Progress

See DtSpsProgress for a list of applicable values.

p0paque

Opaque pointer that was passed in the DtInpChannel::SpectrumScan method.

#### Remarks

The callback function may not block and the amount of processing should be kept as low as possible to avoid stalling the **DTAPI** or driver. In case significant processing time is required the data should be written to a temporary buffer and be processed in another thread.

# **pDtEventCallback**

Prototype of a callback function to be supplied by the user with ::DtapiRegisterCallback and/or DtDevice::RegisterCallback. This callback function is invoked when an event has occurred.

#### **Parameters**

Event

Identifies the event that has been occurred. See ::DtapiRegisterCallback and DtDevice::RegisterCallback for a list of applicable values.

pArgs

Pointer to the DtEventArgs event argument structure with additional information about the event that has been occurred.

#### **Remarks**

The callback function may not block and the amount of processing should be kept as low as possible to avoid stalling the **DTAPI** or driver. In case significant processing time is required the data should be written to a temporary buffer and be processed in another thread.

#### **DtCmmbPars**

# **DtCmmbPars**

Structure describing parameters for CMMB modulation.

#### **Public members**

m Bandwidth

The bandwidth of the channel.

| Value              | Meaning |
|--------------------|---------|
| DTAPI_CMMB_BW_2MHZ | 2 MHz   |
| DTAPI_CMMB_BW_8MHZ | 8 MHz   |

```
m TsRate
```

The rate in bits per second of the input transport stream.

m TsPid

The PID of the CMMB stream in the transport stream.

m AreaId

The area ID. The valid range is 0 ... 127.

m TxIa

The transmitter ID. The valid range is 0 ... 127.

#### **Remarks**

If the CMMB modulation is selected, the data written to the Transmit FIFO shall be in the format of CMMB PMS data packets.

# **DtCmmbPars::RetrieveTsRateFromTs**

Retrieve the TS rate from a 188-byte transport stream with CMMB PMS data packets and store the results in the DtCmmbPars object calling this function.

## **Function Arguments**

pBuffer

Buffer containing CMMB PMS data packets from which to retrieve the TS rate.

NumBytes

Number of transport-stream bytes in the buffer (at least 3MB).

#### Result

| DTAPI_RESULT           | Meaning   |
|------------------------|---|
| DTAPI_OK               | TS rate has be retrieved successfully   |
| DTAPI_E_INSUF_LOAD     | The buffer contains insufficient data to determine the TS rate.                     |
| DTAPI_E_INVALID_TSTYPE | The buffer does not contain a transport stream consisting of CMMB PMS data packets. |

# **DtDemodPars**

# **DtDemodPars**

The DtDemodPars class encapsulates demodulation parameters.

class DtDemodPars;

# **DtDemodPars::CheckValidty**

Check demodulation parameters for validity.

```
DTAPI_RESULT DtDemodPars::CheckValidity(
);
```

# **Function Arguments**

# Result

| DTAPI_RESULT              | Meaning  |
|---------------------------|--|
| DTAPI_OK                  | The demodulation parameters have been set successfully |
| DTAPI_E_INVALID_BANDWIDTH | Invalid value for bandwidth field                      |
| DTAPI_E_INVALID_CONSTEL   | Invalid value for constellation field                  |
| DTAPI_E_INVALID_GUARD     | Invalid value for guard-interval field                 |
| DTAPI_E_INVALID_INTERLVNG | Invalid value for interleaving field                   |
| DTAPI_E_INVALID_J83ANNEX  | Invalid value for J.83 annex                           |
| DTAPI_E_INVALID_MODPARS   | Invalid demodulation parameters                        |
| DTAPI_E_INVALID_PILOTS    | Invalid value for pilots                               |
| DTAPI_E_INVALID_RATE      | Invalid value for convolutional rate or FEC code rate  |
| DTAPI_E_INVALID_SYMRATE   | Invalid value for symbol rate                          |
| DTAPI_E_INVALID_T2PROFILE | Invalid value for DVB-T2 profile                       |
| DTAPI_E_INVALID_TRANSMODE | Invalid value for transmission-mode field              |

# **DtDemodPars::GetModType**

Returns the modulation type. The value <code>DTAPI\_MOD\_TYPE\_UNK</code> indicates that no valid modulation type has been set.

```
int DtDemodPars::GetModType(
);
```

# **Function Arguments**

Result

# **DtDemodPars::SetModType**

Initializes the DtDemodPars object for the specified modulation type.

# **Function Arguments**

ModType

Modulation type for which the DtDemodPars object is initialized.

| Value                  | Meaning            | Encapsulated<br>demodulation<br>parameters | Access method in DtDemodPars |
|------------------------|--------------------|--|------------------------------|
| DTAPI_MOD_ATSC         | ATSC VSB           | DtDemodParsAtsc                            | Atsc()                       |
| DTAPI_MOD_ATSC3        | ATSC 3.0           | DtDemodParsAtsc3                           | Atsc3()                      |
| DTAPI_MOD_DAB          | DAB                | DtDemodParsDab                             | Dab()                        |
| DTAPI_MOD_DVBC2        | DVB-C2             | DtDemodParsDvbC2                           | DvbC2()                      |
| DTAPI_MOD_DVBS_QPSK    | DVB-S, QPSK        | DtDemodParsDvbS                            | DvbS()                       |
| DTAPI_MOD_DVBS2_8PSK   | DVB-S.2, 8PSK      | DtDemodParsDvbS2                           | DvbS2()                      |
| DTAPI_MOD_DVBS2_16APSK | DVB-S.2,<br>16APSK |  |                              |
| DTAPI_MOD_DVBS2_32APSK | DVB-S.2,<br>32APSK |  |                              |
| DTAPI_MOD_DVBS2_QPSK   | DVB-S.2, QPSK      |  |                              |
| DTAPI_MOD_DVBT         | DVB-T              | DtDemodParsDvbT                            | DvbT()                       |

| DTAPI_MOD_QAM256       | 256-QAM            |  |                              |
| DTAPI_MOD_QAM_AUTO     | Autodetect QAM     |  |                              |

## Result

| DTAPI_RESULT | Meaning                                       |
|--------------|---|
| DTAPI_OK     | The modulation type has been set successfully |

DTAPI\_E\_INVALID\_MODTYPE Invalid modulation type

#### **IDtDemodEvent**

Call back interface for demodulation controller events (e.g. tuning frequency has changed).

# IDtDemodEvent::TuningParsHaveChanged

This event method is called when the tuning frequency has been changed.

## **Function Arguments**

OldFreqHz

The old tuning frequency (in Hz). A value of -1 indicates no valid frequency was previously set.

```
OldModType, OldParXtra[3]
```

Old modulation parameters. A value of -1 indicates no previous modulation parameters have been set. Refer to DtInpChannel::SetDemodControl for the possible values of these parameters

NewFreqHz

The new tuning frequency (in Hz).

```
NewModType, NewParXtra[3]
```

New modulation parameters. Refer to DtInpChannel::SetDemodControl for the possible values of these parameters

# IDtDemodEvent::TuningFreqHasChanged

This event method is called when the tuning frequency has been changed.

## **Function Arguments**

OldFreqHz

The old tuning frequency (in Hz). A value of -1 indicates no valid frequency was previously set.

NewFreqHz

The new tuning frequency (in Hz).

## **DtlqDirectPars**

# **DtlqDirectPars**

Structure describing parameters for IQ-direct modulation.

```
struct DtIqDirectPars
{
   DtFractionInt m_SampleRate; // Sample rate
   int m_IqPacking; // Packing of IQ-samples
   int m_ChannelFilter // Channel filter
   int m_Interpolation; // Interpolation method
};
```

## **Members**

m SampleRate

Specifies the sample rate used by hardware to clock out I and Q samples

m IqPacking

Specifies the size of the IQ-sample fields which are transferred over the PCI-Express bus, to reduce the PCI-Express bandwidth usage.

| Value                | Meaning                       |
|----------------------|-------------------------------|
| DTAPI_MOD_IQPCK_AUTO | Best IQ-sample-packing        |
| DTAPI_MOD_IQPCK_NONE | No IQ-sample-packing          |
| DTAPI_MOD_IQPCK_10B  | IQ-samples packed into 10 bit |
| DTAPI_MOD_IQPCK_12B  | IQ-samples packed into 12 bit |

## $m\_ChannelFilter$

Specifies the roll-off of the channel filter or the cut-off frequency of the low-pass filter, only supported for the DTA-2115.

| Value                  | Meaning  |
|------------------------|--|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off   |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off  |
| DTAPI_MOD_ROLLOFF_5    | 5% roll-off  |
| DTAPI_MOD_ROLLOFF_10   | 10% roll-off   |
| DTAPI_MOD_ROLLOFF_15   | 15% roll-off   |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off   |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off   |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off   |
| DTAPI_MOD_LPF_0_614    | Passband up to sample rate*0.614; used for 2MHz CMMB                 |
| DTAPI_MOD_LPF_0_686    | Passband up to sample rate*0.686; used for ISDB-T/Tmm/Tsb            |
| DTAPI_MOD_LPF_0_754    | Passband up to sample rate*0.754; used for 8MHz CMMB, DAB            |
| DTAPI_MOD_LPF_0_833    | Passband up to sample rate*0.833; used for DVB-C2/T/T2               |
| DTAPI_MOD_LPF_0_850    | Passband up to sample rate*0.850; used for DVB-T2 extended bandwidth |

#### m Interpolation

Specifies which interpolation method is used.

| Value                   | Meaning                  |
|-------------------------|--------------------------|
| DTAPI_MOD_INTERPOL_OFDM | Use OFDM interpolation   |
| DTAPI_MOD_INTERPOL_QAM  | Use QAM interpolation    |
| DTAPI_MOD_INTERPOL_RAW  | Raw mode (e.g. DTA-2115) |

## **Remarks**

If the modulation mode IQ-DIRECT is selected, the data written to the Transmit FIFO shall be an array of I/Q sample pairs. The samples are signed 16-bit integer in I, Q order (not dependent on IQ-sample packing).

# **DtlqDirectPars::CheckValidity**

Check the IQ-direct parameters for validity.

```
DTAPI_RESULT DtlqDirectPars::CheckValidity(
);
```

# **Function Arguments**

## Result

| DTAPI_RESULT            | Meaning                                   |
|-------------------------|---|
| DTAPI_OK                | IQ-direct modulation parameters are valid |
| DTAPI_E_INVALID_ROLLOFF | Invalid roll-off or low-pass filter       |
| DTAPI_E_INVALID_FORMAT  | Invalid IQ-packing                        |
| DTAPI_E_INVALID_MODE    | Invalid interpolation type                |

#### Dtlsdb\$3Pars

# **DtlsdbS3Pars**

Structure describing parameters for ISDB-S3 modulation.

## **Public Members**

m SymRate

Symbol rate in baud. Default value: 33.7561Mbd. Valid range: 33.7561Mbd +/- 100ppm.

### **Remarks**

When using ISDB-S3 modulation, complete 5810-byte TLV data packets must be written to the output channel.

# DtlsdbS3Pars::CheckValidity

Check ISDB-S3 parameters for validity.

```
DTAPI_RESULT DtlsdbS3Pars::CheckValidity();
```

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | ISDB-S3 modulation parameters have been found valid |
| DTAPI_E_INVALID_RATE | Invalid ISDB-S3 symbol rate                         |

#### **DtlsdbtPars**

# **DtlsdbtPars**

Structure describing parameters for ISDB-T modulation.

```
struct DtIsdbtPars
 bool m DoMux;
                         // Hierarchical multiplexing yes/no
 bool m FilledOut;
                        // Members have been given a value
 int m ParXtra0;
                         // #Segments, bw, sample rate, sub-channel
                         // Broadcast type
 int m BType;
 int m Mode;
                         // Transmission mode
 int m_Guard;
                         // Guard interval
 int m PartialRx;
                         // Partial reception
 int m Emergency;
                         // Switch-on control for emergency broadcast
                         // PID used for multiplexing IIP packet
 int m IipPid;
 DtIsdbtLayerPars m LayerPars[3]; // Layer-A/B/C parameters
 std::map<int, int> m Pid2Layer; // PID-to-layer map
 // Derived:
 bool m Valid;
                         // The parameter set is valid
 int m TotalBitrate;
                         // Bitrate of entire stream
```

#### **Public Members**

#### m DoMux

If true, perform hierarchical multiplexing in accordance with the ISDB-T parameters as defined explicitly in this class.

If false, the ISDB-T modulation parameters are specified indirectly by the TMCC information in the 16 extra bytes of the 204-byte packets.

#### m FilledOut

This member has significance only if hierarchical multiplexing is on. In that case it indicates whether member variables  $m\_BType$ ,  $m\_Mode$ , ... up to and including  $m\_LayerOther$  have been given a value.

Method RetrieveParsFromTs will set  $m\_FilledOut$  to true if it has succeeded in finding a valid set of parameters in the transport stream. Alternatively, an application can set  $m\_FilledOut$  to true itself if it has filled out the ISDB-T parameters in the DtIsdbtPars object.

#### m ParXtra0

Extra parameter encoding bandwidth, sample rate and number of segments. This parameter is encoded like ParXtraO in SetModControl with ModType DTAPI MOD ISDBT.

# $m_BType$

## Broadcast type.

| Value                  | Meaning   |
|------------------------|---|
| DTAPI_ISDBT_BTYPE_TV   | TV broadcast; Can be used with any number of segments |
| DTAPI_ISDBT_BTYPE_RAD1 | 1-segment radio broadcast; Total #segments must be 1  |
| DTAPI_ISDBT_BTYPE_RAD3 | 3-segment radio broadcast; Total #segments must be 3  |

#### m Mode

Transmission mode.

| Value | Meaning    |
|-------|------------|
| 1     | Mode 1: 2k |
| 2     | Mode 2: 4k |
| 3     | Mode 3: 8k |

#### m Guard

Guard-interval length.

| Value                  | Meaning |
|------------------------|---------|
| DTAPI_ISDBT_GUARD_1_32 | 1/32    |
| DTAPI_ISDBT_GUARD_1_16 | 1/16    |
| DTAPI_ISDBT_GUARD_1_8  | 1/8     |
| DTAPI_ISDBT_GUARD_1_4  | 1/4     |

#### m\_PartialRx

Flag that indicates whether layer A is used for partial reception: 0 = no partial reception, 1 = partial reception on.

#### m Emergency

Flag that indicates whether the switch-on control flag for emergency broadcast should be turned on: 0 = off, 1 = on.

#### m IipPid

PID value used for multiplexing the IIP packet.

#### m LayerPars

Modulation parameters for hierarchical layers A (element 0), B (1) and C (2).

#### m Pid2Layer

Map that specifies the hierarchical layer, or layers, to which an elementary stream is to be mapped. The key in the map is the PID of the elementary stream. The value stored in the map is an OR of one or more flags listed in the table below. A value of 0 indicates that the elementary stream is to be dropped.

| Value               | Meaning                          |  |
|---------------------|----------------------------------|--|
| DTAPI_ISDBT_LAYER_A | Map elementary stream to layer A |  |
| DTAPI_ISDBT_LAYER_B | Map elementary stream to layer B |  |
| DTAPI_ISDBT_LAYER_C | Map elementary stream to layer C |  |

## m\_LayerOther

Map streams with PIDs not in m Pid2Layer to this layer.

#### m Valid

The ISDB-T parameter set is valid. This is a "derived" parameter, which is set to a value by DtIsdbtPars::CheckValidity.

#### ${\it m\_Virtual13Segm}$

Use virtual 13 segment mode. The number of segments in layer B is "faked" to be 12.

#### m TotalBitrate

Bitrate in bps of the entire stream. The bitrate includes the 16 dummy bytes per packet that contain the ISDB-T information.

# **DtlsdbtPars::CheckValidity**

Check ISDB-T parameters for validity. A boolean result (valid/not valid) is stored in the invoking object, in flag  $m\_Valid$ .

# **Function Arguments**

ResultCode

| Value                    | Meaning  |  |  |
|--------------------------|--|--|--|
| DTAPI_ISDBT_OK           | ISDB-T parameters are valid  |  |  |
| DTAPI_ISDBT_E_BANDWIDTH  | Illegal value for bandwidth field in m_ParXtra0  |  |  |
| DTAPI_ISDBT_E_BTYPE      | Illegal value for broadcast type (m_BType)   |  |  |
| DTAPI_ISDBT_E_GUARD      | Illegal value for guard-interval length (m_Guard)  |  |  |
| DTAPI_ISDBT_E_MODE       | Illegal value for transmission mode (m_Mode)   |  |  |
| DTAPI_ISDBT_E_NSEGM      | Number of segments is not equal to 1, 3 or 13, or number of segments is invalid for the current broadcast type, or number of segments encoded in $m\_ParXtra0$ does not match number of segments specified in $m\_LayerPars$ |  |  |
| DTAPI_ISDBT_E_NOTFILLED  | Member $m_{FilledOut}$ is false, indicating that not all ISDB-T parameters have been initialized   |  |  |
| DTAPI_ISDBT_E_PARTIAL    | 'Partial Reception' is selected but number of segments in layer<br>A is not 1  |  |  |
| DTAPI_ISDBT_E_SRATE      | Illegal value for sample rate field in m_ParXtra0  |  |  |
| DTAPI_ISDBT_E_SUBCHANNEL | Invalid sub-channel number. For 1-segment radio: $1 \le \text{sub channel} \le 40$ For 1-segment radio: $4 \le \text{sub channel} \le 37$  |  |  |

## Result

| DTAPI_RESULT | Meaning   |
|--------------|---|
| DTAPI_OK     | ISDB-T modulation parameters have been found valid  |
|              | ISDB-T parameters are invalid. ResultCode is set to a value indicating the reason why the ISDB-T parameters are not valid |

#### **Remarks**

This routine assumes that DtIsdbtPars::ComputeRates has been called so that the rate variables in the DtIsdbtPars object have been set to the correct value.

# **DtlsdbtPars::ComputeRates**

Compute the bit rate per hierarchical layer and store the results in the object calling this function.

```
DTAPI_RESULT DtlsdbtPars::ComputeRates();
```

# **Function Arguments**

## Result

| DTAPI_RESULT | Meaning  |
|--------------|--|
| DTAPI_OK     | ISDB-T rates have been computed successfully                               |
|              | One of the ISDB-T parameters, or the combination of parameters is invalid. |

# **DtlsdbtPars::RetrieveParsFromTs**

Retrieve modulation parameters from a 204-byte transport stream with TMCC information and store the results in the DtIsdbtPars object calling this function.

# **Function Arguments**

pBuffer

Buffer containing transport-stream packets from which to retrieve the ISDB-T parameters.

NumBytes

Number of transport-stream bytes in the buffer.

#### Result

| DTAPI_RESULT           | Meaning   |
|------------------------|---|
| DTAPI_OK               | ISDB-T modulation parameters have been recovered successfully                                       |
| DTAPI_E_INVALID_TSTYPE | The buffer does not contain a transport stream consisting of 204-byte packets with TMCC information |
| DTAPI_E_INSUF_LOAD     | The buffer contains insufficient data to recover all ISB-T modulation parameters                    |

# DtSdi

# **DtSdi**

The DtSdi class contains helper methods for processing SDI data.

class DtSdi;

# **DtSdi::ConvertFrame**

This method can be used to convert an SDI frame from one data format to another, e.g. from 10-bit uncompressed to Huffman compressed.

## **Function Arguments**

pInFrame

Buffer containing the frame to be converted. The buffer address shall be 32-bit aligned.

InFrameSize

As an input argument InFrameSize indicates the number of bytes in the input frame buffer. The input buffer should comprise at least one complete frame, including any stuff-bytes required to achieve 32-bit alignment. Furthermore, InFrameSize must be a multiple of 4. As an output argument InFrameSize indicates how many bytes of the input frame buffer have been used.

InFrameFormat

Specifies the format of the frame-data in the input frame buffer.

| Value            | Meaning  |  |
|------------------|--|--|
|                  | Complete SDI frame, including SAV/ EAV, horizontal and vertical blanking periods |  |
| DTAPI_SDI_ACTVID | Only the active video part of the SDI frame                                      |  |

The format can optionally be combined (OR-ed) with the following flags:

| Value             | Meaning  |  |  |
|-------------------|--|--|--|
| DTAPI_SDI_HUFFMAN | The frame is compressed with lossless Huffman compression  |  |  |
| DTAPI_SDI_625     | The frame contains 625 lines   |  |  |
| DTAPI_SDI_525     | The frame contains 525 lines   |  |  |
| DTAPI_SDI_8B      | 8-bit data samples: every 32-bit word contains four 8-bit samples                                    |  |  |
| DTAPI_SDI_10B     | Packed 10-bit samples: eight 10-bit samples are encoded in ten bytes                                 |  |  |
| DTAPI_SDI_16B     | One 10-bit sample per 16-bit word. Every 32-bit word in the frame buffer contains two 10-bit samples |  |  |

#### pOutFrame

Buffer to receive the converted frame. The buffer address shall be 32-bit aligned

#### OutFrameSize

As an input argument <code>OutFrameSize</code> indicates the size of the output frame buffer. The output buffer should be large enough to receive one complete frame and should be 32-bit aligned. As an output argument <code>OutFrameSize</code> indicates the size of the converted output frame (i.e. number of bytes returned). The returned size includes any stuffing bytes added to the end of the frame to achieve 32-bit alignment.

#### OutFrameFormat

Specifies the desired format of the data format for the output frame (please refer to the InFrameFormat parameter for a description of the available formats).

NOTE: not every input format can be converted to every output format (e.g. it is not possible to convert between 525-line and 625-line frames)

#### Result

| DTAPI_RESULT                 | Meaning   |
|------------------------------|---|
| DTAPI_OK                     | Frame has successfully been converted   |
| DTAPI_E_INVALID_BUF          | The frame input or output buffer pointer is invalid (e.g. NULL pointer or not 32-bit aligned) |
| DTAPI_E_INCOMP_FRAME         | The input buffer does not contain a complete frame  |
| DTAPI_E_OUTBUF_<br>TOO_SMALL | The output buffer is too small for receiving the converted frame                              |
| DTAPI_E_UNSUP_CONV           | The requested conversion is not supported   |

#### **DtStatistic**

# struct DtStatistic

This structure represents a single measurement or statistic value, mostly for RF receiver cards. It is used in DtInpChannel::GetStatistics to pass measurements and statistics information. Please use DtInpChannel::GetSupportedStatistics to obtain a list of statistics supported for a given input channel.

```
struct DtStatistic
  DTAPI_RESULT m_Result;
                            // Result of retrieving the statistic
  int m StatisticId;
                            // DTAPI STAT XXX
  int m_IdXtra[4];
                            // Extra identification parameters
  int m ValueType;
                            // Identifies the type of the value
  union {
   bool m_ValueBool; // Value if value type is STAT_VT_BOOL
    double m ValueDouble; // Value if value type is STAT VT DOUBLE
    int m ValueInt;
                            // Value if value type is STAT VT INT
    void* m pValue;
                            // Pointer if value type is not boolean,
                            // int or double
  };
```

#### **Members**

m Result

If the user queries one or more measurements with DtInpChannel::GetStatistics, this member is used to return the result code for retrieving the statistic from the receiver hardware.

m StatisticId

Identifies the statistic:

| Statistic               | Туре   | Meaning  |
|-------------------------|--------|--|
| DTAPI_STAT_AGC1         | int    | Returns the AGC1 value   |
| DTAPI_STAT_AGC2         | int    | Returns the AGC2 value   |
| DTAPI_STAT_ATSC3_L1DATA | struct | ATSC 3.0 layer-1 signaling data  |
| DTAPI_STAT_BADPCKCNT    | int    | Count of uncorrected packets. Returns 0 if the receiver is not locked. Remark: for DTA-2136 only this value is reset on each call. |
| DTAPI_STAT_BER_POSTBCH  | double | Post-BCH bit error rate  |
| DTAPI_STAT_BER_POSTLDPC | double | Post-LDPC bit error rate.<br>m_IdXtra[0] identifies: ATSC 3.0/DVB-C2/T2 PLP.   |
| DTAPI_STAT_BER_POSTVIT  | double | Post-Viterbi bit error rate.<br>m_ldXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer.                       |
| DTAPI_STAT_BER_PREBCH   | double | Pre-BCH bit error rate. m_ldXtra[0] identifies: ATSC 3.0/DVB-C2/T2 PLP.  |
| DTAPI_STAT_BER_PRELDPC  | double | Pre-LDPC bit error rate.<br>m_ldXtra[0] identifies: ATSC 3.0/DVB-C2/T2 PLP.  |

| DTAPI_STAT_BER_PRERS        | double | Pre-Reed-Solomon bit error rate.<br>m_IdXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer.                              |
|-----------------------------|--------|---|
| DTAPI_STAT_BER_PREVIT       | double | Pre-Viterbi bit error rate.<br>m_ldXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer.                                   |
| DTAPI_STAT_CARRIER_LOCK     | bool   | Carrier lock status   |
| DTAPI_STAT_CNR              | int    | Carrier-over-noise ratio in units of 0.1dB  |
| DTAPI_STAT_DAB_ENSEM_INFO   | struct | DAB ensemble information from the Fast Information Channel (FIC)  |
| DTAPI_STAT_DAB_TXID_INFO    | struct | DAB transmitter identification information (TII)  |
| DTAPI_STAT_DVBC2_DSLICEDISC | int    | DVB-C2 data slice discontinuity count   |
| DTAPI_STAT_DVBC2_L1HDR_ERR  | int    | DVB-C2 L1-Preamble header error count   |
| DTAPI_STAT_DVBC2_L1P2_ERR   | int    | DVB-C2 L1-Part 2 error count  |
| DTAPI_STAT_DVBC2_L1P2DATA   | struct | DVB-C2 layer-1 part 2 signalling data   |
| DTAPI_STAT_DVBC2_PLPSIGDATA | struct | DVB-C2 layer-1 PLP signalling data  |
| DTAPI_STAT_DVBT_TPS_INFO    | struct | DVB-T transmission parameter signalling information   |
| DTAPI_STAT_DVBT2_L1DATA     | struct | DVB-T2 layer-1 signalling data  |
| DTAPI_STAT_DVBT2_L1POST_ERR | int    | DVB-T2 L1-Post error count  |
| DTAPI_STAT_DVBT2_L1PRE_ERR  | int    | DVB-T2 L1-Post error count  |
| DTAPI_STAT_ESN0             | int    | Energy per symbol to noise power spectral density in units of 0.1dB   |
| DTAPI_STAT_EBN0             | int    | Energy per bit to noise power spectral density ratio in units of 0.1dB  |
| DTAPI_STAT_FEC_LOCK         | bool   | FEC decoding lock status  |
| DTAPI_STAT_FER_POSTBCH      | double | Post-BCH frame error rate.<br>m_ldXtra[0] identifies: ATSC 3.0/DVB-C2/T2 PLP.   |
| DTAPI_STAT_FREQ_SHIFT       | double | Input frequency shift (Hz)  |
| DTAPI_STAT_ISDBT_PARSDATA   | struct | ISDB-T signalling data  |
| DTAPI_STAT_LDPC_STATS       | struct | LDPC error correction counters.<br>m_ldXtra[0] identifies: DVB-C2/T2 PLP.   |
| DTAPI_STAT_LINKMARGIN       | int    | Difference in dB between C/N of the received signal and the C/N at which the receiver cannot demodulate the signal any more in units of 0.1dB |
| DTAPI_STAT_LOCK             | bool   | Overall lock status   |
| DTAPI_STAT_MA_DATA          | struct | DVB-C2/T2 mode adaptation data.<br>m_ldXtra[0] identifies: DVB-C2/T2 PLP.   |
| DTAPI_STAT_MA_STATS         | struct | DVB-C2/T2 mode adaptation statistics. m_ldXtra[0] identifies: DVB-C2/T2 PLP.  |
| DTAPI_STAT_MER              | int    | MER in units of 0.1dB.<br>m_ldXtra[0] identifies: ATSC 3.0/DVB-C2/T2 PLP.   |

| DTAPI_STAT_OCCUPIEDBW      | double | Occupied bandwidth in MHz  |
|----------------------------|--------|--|
| DTAPI_STAT_PACKET_LOCK     | bool   | Packet-level lock status   |
| DTAPI_STAT_PER             | double | Packet-error rate.<br>m_ldXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer.               |
| DTAPI_STAT_PLP_BLOCKS      | struct | DVB-T2 number of FEC blocks.<br>m_ldXtra[0] identifies: DVB-T2 PLP.  |
| DTAPI_STAT_RELOCKCNT       | int    | Receiver relock count  |
| DTAPI_STAT_RFLVL_CHAN      | int    | RF level for channel bandwidth in units of 0.1dBmV   |
| DTAPI_STAT_RFLVL_CHAN_QS   | int    | Quick-scan RF level for channel bandwidth in units of 0.1dBmV  |
| DTAPI_STAT_RFLVL_NARROW    | int    | RF level for a narrow bandwidth in units of 0.1dBmV  |
| DTAPI_STAT_RFLVL_NARROW_QS | int    | Quick-scan RF level for a narrow bandwidth in units of 0.1dBmV   |
| DTAPI_STAT_RFLVL_UNCALIB   | int    | Uncorrected RF level reported by the tuner in units of 0.1dBmV   |
| DTAPI_STAT_ROLLOFF         | double | Roll-off factor (percentage)   |
| DTAPI_STAT_RS              | int    | Reed-Solomon error count. Set to -1 if receiver is not locked  Note: See remarks section for usage instructions  |
| DTAPI_STAT_RSDEC_STATS     | struct | Reed-Solomon decoder statistics.<br>m_ldXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer. |
| DTAPI_STAT_SAMPRATE_OFFSET | double | Sample rate offset (ppm)   |
| DTAPI_STAT_SNR             | int    | Signal-to-noise ratio in units of 0.1dB  |
| DTAPI_STAT_SPECTRUMINV     | bool   | Spectrum inversion   |
| DTAPI_STAT_T2MI_OVFS       | int    | DVB-T2 T2-MI overflow count  |
| DTAPI_STAT_TEMP_TUNER      | int    | Tuner temperature  |
| DTAPI_STAT_VIT_LOCK        | bool   | Viterbi lock status  |
| DTAPI_STAT_VITDEC_STATS    | struct | Viterbi decoder statistics.<br>m_ldXtra[0] identifies: DAB sub-channel's start-<br>address or ISDB-T layer.      |

# m\_IdXtra[4]

Extra identification attributes. See the statistics for possible values or can be set to -1 if not applicable (default value).

## m ValueType

Identifies the type of the value according to the following table:

| Value            | Meaning   |
|------------------|---|
| STAT_VT_ATSC3_L1 | The value type is pointer to DtAtsc3DemodL1Data |

| STAT_VT_BOOL          | The value type is bool                                |
|-----------------------|---|
| STAT_VT_DOUBLE        | The value type is double                              |
| STAT_VT_DAB_ENSEM     | The value type is pointer to DtDabEnsembleInfo        |
| STAT_VT_DVBC2_L1P2    | The value type is pointer to DtDvbC2DemodL1Part2Data  |
| STAT_VT_DVBC2_PLPSIG  | The value type is pointer to DtDvbC2DemodL1PlpSigData |
| STAT_VT_DVBT_TPS_INFO | The value type is pointer to DtDvbTTpsInfo            |
| STAT_VT_DVBT2_L1      | The value type is pointer to DtDvbT2DemodL1Data       |
| STAT_VT_INT           | The value type is int                                 |
| STAT_VT_ISDBT_PARS    | The value type is pointer to DtIsdbtParamsData        |
| STAT_VT_LDPC_STATS    | The value type is pointer to DtDemodLdpcStats         |
| STAT_VT_MA_DATA       | The value type is pointer to DtDemodMaLayerData       |
| STAT_VT_MA_STATS      | The value type is pointer to DtDemodMaLayerStats      |
| STAT_VT_PLP_BLOCKS    | The value type is pointer to DtDemodPlpBlocks         |
| STAT_VT_RS_STATS      | The value type is pointer to DtRsDecStats             |
| STAT_VT_VIT_STATS     | The value type is pointer to DtVitDecStats            |
| STAT_VT_UNDEFINED     | The value is not valid yet                            |

m\_ValueBool, m\_ValueDouble, m\_ValueInt, m\_pValue
The value of the statistic. m\_ValueType determines which variable is used.

#### **Remarks**

The **DTAPI\_STAT\_RS** statistic is available only if the hardware has been put in a special mode using the **SetErrorStats** method. Refer to **DtInpChannel::SetErrorStats** for a full description.

In DVB-S2, the DTAPI\_STAT\_BER\_PRELDPC statistic is the bit error rate before the receiver has applied any error correction. For the DTA-2137 it is computed from the MER. This computation has been validated using DekTec's advanced demodulator simulation software (this software has been used amongst others in the DVB working groups for the definition of DVB-T2 and DVB-C2). The correspondence between theoretical and measured values is very good.

For the DTA-2137, the **DTAPI\_STAT\_BER\_ESN0** statistic is computed from the MER under the assumption that the noise distribution is Gaussian (AWGN channel), as under these circumstances  $E_s/N_0$  and MER are identical.

For the DTA-2137, the **DTAPI\_STAT\_BER\_EBN0** statistic is computed from the  $E_s/N_0$  and is valid for constant modulated (CCM) streams only.

# DtStatistic::GetValue

Get the value of the statistic.

```
DTAPI RESULT DtStatistic::GetValue(int& Value);
DTAPI RESULT DtStatistic::GetValue(double& Value);
DTAPI RESULT DtStatistic::GetValue(bool& Value);
DTAPI RESULT DtStatistic::GetValue(DtAtsc3DemodL1Data*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDabEnsembleInfo*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDvbC2DemodL1Part2Data*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDvbC2DemodL1PlpSigData*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDvbTTpsInfo*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDvbT2DemodL1Data*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDemodLdpcStats*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDemodMaLayerData*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDemodMaLayerStats*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtDemodPlpBlocks*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtIsdbtParamsData*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtRsDecStats*& pValue);
DTAPI RESULT DtStatistic::GetValue(DtVitDecStats*& pValue);
```

#### **Function Arguments**

Value

Receives the value of the statistic. The type of Value must match the type of the statistic. Integers are not automatically converted to doubles or vice versa.

pValue

Receives a pointer to the value of the statistic.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Frame has successfully been converted                                   |
| DTAPI_E_INVALID_TYPE | The value type of the overload does not match the type of the statistic |

#### **Global Functions**

# ::DtapiCheckDeviceDriverVersion

Check whether the versions of the device drivers are compatible with the current version of the **DTAPI** library.

```
DTAPI_RESULT ::DtapiCheckDeviceDriverVersion(void);

DTAPI_RESULT ::DtapiCheckDeviceDriverVersion(int DeviceCategory);
```

## **Function Arguments**

*DeviceCategory* 

Device category (DTAPI\_CAT\_PCI or DTAPI\_CAT\_USB) of device driver for which to check the version.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The device drivers are compatible with the current version of the DTAPI library.  |
| DTAPI_E_DRIVER_INCOMP | Version of at least one of the device drivers is incompatible with<br>the DTAPI library. The device drivers need to be upgraded.  |
| DTAPI_E_NO_DEVICE     | Device-driver version cannot be queried because no DekTec device of the given category is available in the system, or the DekTec devices are disabled in the Windows device manager, or the DekTec device driver for the category is not installed. |

#### **Remarks**

These functions can only check the driver version if a PCI or USB device is installed. DTE devices use the standard network drivers and no specific DekTec driver that could be incompatible.

## ::DtapiDeviceScan

Scan DekTec devices in the system.

## **Function Arguments**

NumEntries

Specifies the size, in number of **DtDeviceDesc** entries, of the caller-supplied *pDvcDesc* array.

#### NumEntriesResult

Output argument that receives the number of devices found and described in *DvcDescArr*. The value of this argument can be greater than *NumEntries*; in this case **DtapiDeviceScan** returns **DTAPI E BUF TOO SMALL**.

DvcDescArr

Pointer to a caller-supplied array of **DtDeviceDesc** entries to receive the device descriptions.

#### IncluteDycs

Include DekTec DTE-31xx devices in the scan. This requires scanning the network.

#### ScanOrder

The order in which the devices in the system are returned. By default the first results are PCI devices (DTA-1xx, DTA-2xxx), then USB devices (DTU-xxx), then networked devices (DTE-31xx). The order of devices within one device category is OS-dependent. If you use **DTAPI SCANORDER SN** the devices in the *DvcDescArr* array will be sorted by serial number.

| Value                | Meaning                        |
|----------------------|--------------------------------|
| DTAPI_SCANORDER_ORIG | Sort devices by type (default) |
| DTAPI_SCANORDER_SN   | Sort devices by serial number  |

#### Result

| DTAPI_RESULT | Meaning   |
|--------------|---|
|              | Scan has completed successfully and the <code>DvcDescArr</code> array was large enough to contain all device descriptions.                                      |
|              | The number of device-description entries in <code>DvcDescArr</code> is too small. The number of entries required is returned in <code>NumEntriesResult</code> . |

#### Remarks

**DtapiDeviceScan** scans the PCI and USB bus(es) in the current system and returns all DekTec devices found.

If InclDteDvcs is set to true, DtapiDeviceScan also scans the network for DekTec DTE-31xx devices. This will take extra time.

This function may have to be called twice. The first time, <code>NumEntries</code> should be set to a best-guess maximum value. If the result status is <code>DTAPI\_E\_BUF\_TOO\_SMALL</code>, the application should free the current array of <code>DtDeviceDesc</code> entries, allocate a new array with the number of entries returned in <code>NumEntriesResult</code>, and call <code>DtapiDeviceScan</code> again.

## ::DtapiDtDeviceDesc2String

Create a descriptive string from a device descriptor, e.g. "DTA-2145 in Slot 0".

### **Function Arguments**

pDvcDesc

Pointer to the hardware function descriptor used as input to create our string description.

#### StringType

Defines the type of string to create. Can be any of the values defined in the table below. The values should be prefixed by **DTAPI DVC2STR**.

| Value        | Example              | Meaning                         |
|--------------|----------------------|---------------------------------|
| TYPE_NMB     | "DTA-2145"           | Device type number              |
| TYPE_AND_LOC | "DTA-2145 in slot 5" | Device type number and location |

pString

Pointer to the buffer that receives the descriptive string.

#### StringLength

Size of the provided buffer (including space for '\0' termination). If the size specified here is too short, the generated string will be clipped and no error is returned. A size of 64 characters should suffice for all strings created with this function.

### Results

| DTAPI_RESULT        | Meaning   |
|---------------------|---|
| DTAPI_OK            | Successfully created a string                                 |
| DTAPI_E_INVALID_BUF | An invalid buffer pointer is supplied for pDvcDesc or pString |

## ::DtapiDtHwFuncDesc2String

Create a descriptive string for a hardware function from a **DtHwFuncDesc** structure, e.g. "DTA-2145 in slot 5" or "DVB-ASI".

### **Function Arguments**

pHwFunc

Pointer to the hardware function descriptor used as input to create our string description.

#### StringType

Defines the type of string to create. Can be any of the values defined in the table below. The values should be prefixed by **DTAPI HWF2STR**.

| Value          | Example              | Meaning  |
|----------------|----------------------|--|
| TYPE_NMB       | "DTA-2111"           | Device type number   |
| TYPE_AND_PORT  | "DTA-145 port 1"     | Device type number and port number if necessary to uniquely identify the hardware function. If both ports of a DTA-145 are configured as output this function will return "DTA-145 port 1", if port 1 is configured as input and port 2 as output this function will return "DTA-145". |
| TYPE_AND_LOC   | "DTA-2144 in slot 5" | Device type number and location  |
| ITF_TYPE       | "DVB-ASI"            | Physical interface type  |
| ITF_TYPE_SHORT | "ASI"                | Physical interface type – short descrip-<br>tive string  |

pString

Pointer to the buffer that receives the descriptive string

#### StringLength

Size of the provided buffer (including space for '\0' termination). If the size specified here is too short, the generated string will be clipped and no error is returned. A size of 64 characters should suffice for all strings created with this function.

## Results

| DTAPI_RESULT        | Meaning  |
|---------------------|--|
| DTAPI_OK            | Successfully created a string  |
| DTAPI_E_INVALID_BUF | An invalid buffer pointer is supplied for <code>pHwFunc</code> or <code>pString</code> |

## ::DtapiGetDeviceDriverVersion

Get device driver version information.

**Note**: function overload that returns a vector of driver versions should be used to retrieve the DtPcie driver version.

### **Function Arguments**

DeviceCategory

Argument specifying the device category:

| Value          | Meaning   |
|----------------|---|
| DTAPI_CAT_ALL  | Query versions of all device drivers available (only supported for function overload that returns a vector of driver versions). |
| DTAPI_CAT_PCI  | PCI-bus device; Query version of Dta32, Dta64 or DtPcie64 device driver.  |
| DTAPI_CAT_USB  | USB device; Query version of Dtu32 or Dtu64 device driver.  |
| DTAPI_CAT_NW   | Network device; Query version of DtaNw32 or DtaNw64 device driver   |
| DTAPI_CAT_NWAP | VLAN device; Query version of DtaNwAp32 or DtaNwAp64 device driver  |

Major

Major version number of the device driver. This number is incremented for major functional upgrades of the device driver.

Minor

The minor version number is incremented for small functional increments of the device driver.

BugFix

The bug-fix version number is incremented when a bug in the device driver has been fixed, without further functional enhancements to the driver.

Build

Build number.

DriverVersions

Vector with the retrieved driver versions.

## Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Device-driver version has been retrieved successfully.  |
| DTAPI_E_NO_DEVICE     | Device-driver version cannot be queried because no DekTec device with the specified device category is installed. |
| DTAPI_E_NOT_SUPPORTED | The specified device category does not use a device driver with a version that can be queried.                    |

## ::DtapiGetDtapiServiceVersion

Get version of the DTAPI service.

### **Function Arguments**

SvcMajor

Major version number of the DTAPI service.

SvcMinor

The minor version number is incremented for small functional increments of the DTAPI service.

SvcBugFix

This number is incremented when a bug in the **DTAPI** service has been fixed, without functional enhancements.

SvcBuild

Build number.

#### Result

| DTAPI_RESULT                   | Meaning   |
|--------------------------------|---|
| DTAPI_E_CONNECT_<br>TO_SERVICE | Failed to connect to the DTAPI service.           |
| DTAPI_OK                       | Version numbers have been retrieved successfully. |

#### **Remarks**

The main version of **DTAPI** is the one retrieved with ::DtapiGetVersion. The version of the **DTAPI** service is required in specific circumstances only.

## ::DtapiGetVersion

Get version of the DTAPI library.

## **Function Arguments**

Major

Major version number of the **DTAPI** library. This number is incremented for major functional upgrades of the **DTAPI**.

Minor

The minor version number is incremented for small functional increments of the DTAPI.

BugFix

This number is incremented when a bug in the **DTAPI** library has been fixed, without functional enhancements.

Build

Build number.

#### Result

| DTAPI_RESULT | Meaning   |
|--------------|---|
| DTAPI_OK     | Version numbers have been retrieved successfully. |

## **Remarks**

This function always succeeds.

The PCI and USB device driver have their own version number, which is independent from the **DTAPI** library version.

## ::DtapiHwFuncScan

Scan hardware functions hosted by DekTec devices.

### **Function Arguments**

NumEntries

Specifies the size, in number of DtHwFuncDesc entries, of the caller-supplied pHwFuncs array.

#### NumEntriesResult

Output argument that receives the number of hardware functions found and described in pHwFuncs. The value of this argument can be greater than NumEntries; in this case **DtapiHwFuncScan** returns **DTAPI E BUFFER TOO SMALL**.

#### pHwFuncs

Pointer to a caller-supplied array of **DtHwFuncDesc** entries to receive the hardware-function descriptors. A NULL pointer may be supplied, but only if *NumEntries* is 0.

#### InclDteDvcs

Include DekTec DTE-31xx devices in the scan. This requires scanning the network.

#### ScanOrder

The order in which the devices in the system are scanned. By default the first results are functions of DTA devices, then DTU devices, then DTE devices. The order of devices within one device category is OS-defined. If you use <code>DTAPI\_SCANORDER\_SN</code> the devices will be sorted by serial number before enumerating the hardware functions.

The order in which the devices in the system are returned. By default the first results are functions of PCI devices (DTA-1xx, DTA-2xxx), then USB devices (DTU-xxx), then networked devices (DTE-31xx). The order of devices within one device category is OS-dependent. If you use DTAPI\_SCANORDER\_SN the devices will be sorted by serial number before enumerating the hardware functions.

| Value                | Meaning                        |
|----------------------|--------------------------------|
| DTAPI_SCANORDER_ORIG | Sort devices by type (default) |
| DTAPI_SCANORDER_SN   | Sort devices by serial number  |

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Scan has completed successfully and the <code>pHwFuncs</code> array was large enough to contain all function descriptions.           |
| DTAPI_E_BUF_TOO_SMALL | The number of function-description entries in pHwFuncs is too small. The number of entries required is returned in NumEntriesResult. |
| DTAPI_E_INVALID_BUF   | A NULL pointer was supplied to <code>pHwFuncs</code> while <code>NumEntries</code> is greater than 0.                                |

#### **Remarks**

**DtapiHwFuncScan** scans the PCI and USB bus(es) in the current system and returns all hardware functions hosted by DekTec devices. Each device may implement multiple hardware functions.

If InclDteDvcs is set to true, the DtapiHwFuncScan also scans the network for DekTec DTE-31xx devices. This will take extra time.

This function may have to be called twice. The first time, NumEntries should be set to a best-guess maximum value. If the result status is DTAPI\_E\_BUF\_TOO\_SMALL, the application should free the current array of DtHwFuncDesc entries, allocate a new array with the number of entries returned in NumEntriesResult, and call DtapiHwFuncScan again.

Another method is to start with setting pHwFuncs to NULL and NumEntries to 0. The number of required hardware-function entries will be returned, after which pHwFuncs can be allocated with the right size and **DtapiHwFuncScan** called again.

The hardware-function descriptors are always retrieved in the same order. Hardware functions hosted by the same device are grouped together. Within a group of hardware functions hosted by a particular device, functions of the same type are grouped together. These sequencing rules enable application programs to easily create function lists in a 'logical' order.

## ::DtapiInitDtlpParsFromlpString

Initializes the IP and source-IP address members of a TS-over-IP parameters structure.

### **Function Arguments**

*IpPars* 

TS-over-IP parameters structure to initialize.

pIp

Pointer to a string that holds the IP address (e.g. "127.0.0.1") to be used as destination IP address. If this pointer is NULL the IP address "0.0.0.0" will be used.

pSrcIp

Pointer to a string that holds the IP address (e.g. "192.168.0.1") to be used as source IP address. If this pointer is NULL the IP address "0.0.0.0" will be used.

#### Results

| DTAPI_RESULT | Meaning                 |
|--------------|-------------------------|
| DTAPI_OK     | This method cannot fail |

#### Remarks

This method only initializes the m\_Ip and m\_SrcIp members in the TS-over-IP parameters structure, it will leave the other members untouched.

## ::DtapiloStd2VidStd

Convert Value and SubValue parameter values (as used in DtDevice::SetIoConfig calls) to a DTAPI VIDSTD XXX constant (as used in the Matrix API to identify video standards).

## **Function Arguments**

Value, SubValue

I/O configuration value and sub value to be converted to a **DTAPI\_VIDSTD\_XXX** standard.

VidStd

Corresponding video standards. For example, value **DTAPI\_IOCONFIG\_HDSDI** and sub value **DTAPI\_IOCONFIG\_1080150** are converted to **DTAPI\_VIDSTD\_1080150**.

#### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_E_INVALID_VIDSTD | Value and SubValue do not correspond to a video standard   |
|                        | Successfully converted I/O configuration value and sub value to the corresponding video standard |

## ::DtapiModPars2SymRate

Compute symbol rate from transport-stream rate and modulation parameters.

#### **Function Arguments**

SymRate

The symbol rate in baud computed from transport-stream rate and modulation parameters.

```
ModType, ParXtra0, ParXtra1, ParXtra2
```

Set of modulation parameters from which the symbol rate is computed. Refer to DtOutpChannel::SetModControl on page 388 for more details about these parameters.

TsRate

transport-stream rate in bps.

#### Result

| DTAPI_RESULT        | Meaning  |
|---------------------|--|
| DTAPI_OK            | Symbol rate has been computed successfully                                   |
| Other result values | Error in modulation parameters, please refer to DtOutpChannel::SetModControl |

## ::DtapiModPars2TsRate

Compute transport-stream rate from modulation parameters. There are overloads for different modulation types, please refer to DtOutpChannel::SetModControl.

```
DTAPI RESULT ::DtapiModPars2TsRate(
DTAPI RESULT ::DtapiModPars2TsRate(
[out] DtFractionInt& TsRate // Computed transport-stream rate
 );
DTAPI RESULT ::DtapiModPars2TsRate(
[out] int& TsRate // Computed transport-stream rate
 [in] DtDvbC2Pars& C2Pars // DVB-C2 modulation parameters
 [in] int PlpIdx=-1 // Optional PLP-index
DTAPI RESULT ::DtapiModPars2TsRate(
[out] DtFractionInt & TsRate // Computed transport-stream rate
 [in] DtDvbC2Pars& C2Pars // DVB-C2 modulation parameters
 [in] int PlpIdx=-1 // Optional PLP-index
);
DTAPI RESULT ::DtapiModPars2TsRate(
[out] int& TsRate // Computed transport-stream rate
 [in] DtDvbT2Pars& T2Pars // DVB-T2 modulation parameters
 [in] int PlpIdx=-1 // Optional PLP-index
);
DTAPI RESULT ::DtapiModPars2TsRate(
[out] DtFractionInt & TsRate // Computed transport-stream rate
 [in] DtDvbT2Pars& T2Pars // DVB-T2 modulation parameters
 [in] int PlpIdx=-1
                       // Optional PLP-index
);
DTAPI RESULT ::DtapiModPars2TsRate(
[out] int& TsRate // Computed transport-stream rate
 [in] DtIsdbTmmPars& TmmPars // DVB-S2 modulation parameters
 [in] int TsIdx=-1
                   // Optional stream-index
DTAPI RESULT ::DtapiModPars2TsRate(
[out] DtFractionInt & TsRate // Computed transport-stream rate
 [in] DtIsdbTmmPars& TmmPars // DVB-S2 modulation parameters
 [in] int TsIdx=-1
                   // Optional stream-index
```

## **Function Arguments**

*TsRate* 

The transport-stream rate in bps computed from modulation parameters.

ModType, ParXtra0, ParXtra1, ParXtra2

Set of modulation parameters from which the transport-stream rate is computed. Refer to DtOutpChannel::SetModControl on page 388 for more details about these parameters.

C2Pars

DVB-C2 modulation parameters from which the transport-stream rate of a PLP (default PLP0) is computed; see description of class DtDvbC2Pars.

T2Pars

DVB-T2 modulation parameters from which the transport-stream rate of a PLP (default PLP0) is computed; see description of class DtDvbT2Pars.

*TmmPars* 

ISDB-Tmm modulation parameters from which the transport-stream rate of a stream (default stream 0) is computed; see description of class DtIsdbTmmPars.

SymRate

Symbol rate in baud. This argument is only required for modulation modes that are dependent on a symbol rate: DVB-C, DVB-S and DVB-S.2.

For other modulation modes the transport-stream rate is uniquely determined by ModType, ParXtra1 and ParXtra2.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Successfully derived a TS-rate from the modulation parameters                |
| DTAPI_E_SYMRATE_REQD | Conversion requires a symbol rate but none is specified                      |
| Other result values  | Error in modulation parameters, please refer to DtOutpChannel::SetModControl |

# ::DtapiPower2Voltage

Convert from dBm to dBmV.

## **Function Arguments**

dBm

Input level in dBm that is to be converted.

dRmV

Converted level expressed in dBmV.

Is500hm

Indicates whether conversion has to be applied for a  $50-\Omega$  impedance (true) or a  $75-\Omega$  impedance (false).

#### Result

| DTAPI_RESULT | Meaning  |
|--------------|--|
| DTAPI_OK     | Successfully converted the level in dBm to a level in dBmV |

## ::DtapiRegisterCallback

Register to one or multiple events and define the callback function.

## **Function Arguments**

Callback

Pointer to the user-provided callback function that will be called when an event occurred.

pContext

Opaque pointer that is passed to the callback function.

**EventTypes** 

Specifies the events to subscribe to. The events may be OR-ed together.

Global events:

| Event                | Meaning  |
|----------------------|--|
| DT_EVENT_TYPE_ADD    | A DekTec device has been inserted and is now available.      |
| DT_EVENT_TYPE_REMOVE | A DekTec device has been removed and is no longer available. |

pId

Pointer to the event subscription identifier.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Callback function has been attached successfully to the event(s)                       |
| DTAPI_E_INVALID_TYPE | The EventTypes argument contains invalid event types.                                  |
| DTAPI_E_INVALID_ARG  | The value of one of the arguments is invalid, and no specific other error code applies |
| DTAPI_E_OUT_OF_MEM   | Event watcher cannot be allocated  |

# ::DtapiResult2Str

Convert **DTAPI\_RESULT** value to a string.

```
const char* ::DtapiResult2Str(
   [in] DTAPI_RESULT DtapiResult // DTAPI_RESULT value to be converted
);
```

## **Function Arguments**

DtapiResult

**DTAPI\_RESULT** value to be converted to a string.

#### Result

#### **Remarks**

For ease of use, this function doesn't return a DTAPI\_RESULT but returns the string directly.

# ::DtapiUnregisterCallback

Unregister to the one or multiple events.

## **Function Arguments**

pId

Pointer to the event subscription identifier given by DtapiRegisterCallback.

## Result

| DTAPI_RESULT            | Meaning  |
|-------------------------|--|
| DTAPI_OK                | Callback function has been successfully unregistered.                                  |
|                         | The value of one of the arguments is invalid, and no specific other error code applies |
| DTAPI_E_NOT_INITIALIZED | No callback functions for events have been registered                                  |

## ::DtapiVidStd2IoStd

Convert a DTAPI\_VIDSTD\_XXX constant, used in the Matrix API to identify video standards, to Value and SubValue parameter values used in DtDevice::SetIoConfig calls.

## **Function Arguments**

VidStd

Video standard to be converted: DTAPI\_VIDSTD\_1080150, ...

Value, SubValue

Converted I/O configuration value and sub value. For example, **DTAPI\_VIDSTD\_1080150** is converted to value **DTAPI IOCONFIG HDSDI** and sub value **DTAPI IOCONFIG 1080150**.

#### Result

| DTAPI_RESULT           | Meaning   |
|------------------------|---|
| DTAPI_E_INVALID_VIDSTD | An invalid value for video standard was specified   |
| <u> </u>               | Successfully converted the video standard to I/O configuration<br>Value and SubValue values |

#### Remarks

The return value is only valid for SDI ports. For SPISDI ports there is no corresponding function.

# ::DtapiVidStd2Str

Convert a DTAPI\_VIDSTD\_XXX constant to a human-readable string.

## **Function Arguments**

VidStd

Video standard to be converted. For example, **DTAPI\_VIDSTD\_1080150**, is converted to "DTAPI VIDSTD 1080I50".

#### Result

#### **Remarks**

For ease of use, this function doesn't return a DTAPI RESULT but returns the string directly.

# ::DtapiVoltage2Power

Convert from dBmV to dBm.

## **Function Arguments**

dBmV

Input level in dBmV that is to be converted.

dRm

Converted level expressed in dBm.

Is500hm

Indicates whether conversion has to be applied for a  $50-\Omega$  impedance (true) or a  $75-\Omega$  impedance (false).

## Result

| DTAPI_RESULT | Meaning  |
|--------------|--|
| DTAPI_OK     | Successfully converted the level in dBmV to a level in dBm |

## class DtAvInputStatus

Class for reading the status of audio/video input ports.

## **DtAvInputStatus::AttachToPort**

Attach the audio/video input status object to a specific physical port on the device. Attachment is non-exclusive, so that the status can be read from multiple processes.

## **Function Arguments**

pDtDvc

Pointer to the device object that represents a DekTec device. The device object must have been attached to the device hardware.

Port

Physical port number. The status retrieval object is attached to this port.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Status object has been attached successfully to the port.                                     |
| DTAPI_E_ATTACHED     | Status object is already attached.  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.  |
| DTAPI_E_DEVICE       | Pointer <i>pDtDvc</i> is not valid or the device object is not attached to a hardware device. |
| DTAPI_E_NO_DT_INPUT  | Port is not an input  |
| DTAPI_E_NO_SUCH_PORT | Invalid port number for this device   |

# **DtAvInputStatus::Detach**

Detach the audio/video input status object from the port and free associated resources.

```
DTAPI_RESULT DtAvInputStatus::Detach
(
);
```

## **Function Arguments**

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Status object has been detached successfully from the port.                     |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function, so it cannot be detached |

# DtAvInputStatus::DetectVidStd

Detect the video standard and link nr of the signal currently applied to the input port.

## **Function Arguments**

Infc

Returns information about the detected video standard.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Call succeeded  |
| DTAPI_E_NOT_SUPPORTED | Detection of video standard is not supported for current device |
| DTAPI_E_DEV_DRIVER    | Unexpected driver error   |

## **Remarks**

This function is only supported by cards having the Matrix2, SdiRx or Hdmi capability.

# **DtAvInputStatus::GetAudChanStatus**

Get the status of the audio channels. A channel is defined as a single stream of audio samples.

```
DTAPI_RESULT DtAvInputStatus::GetAudChanStatus
(
    // Status per audio channel
    [out] std::vector<DtAudChanStatus>& AudChns;
);
```

## **Function Arguments**

AudChns

Vector with the retrieved status per audio channel.

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | The status of the audio channels has been retrieved successfully. |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.                            |
| DTAPI_E_NOT_ATTACHED | Status object is not attached to a hardware port.                 |

## DtAvInputStatus::GetDolbyMetadata

Get Dolby metadata from ancillary data packets in the SDI stream, formatted in compliance with SMPTE 2020-1 Format of Audio Metadata and Description of the Asynchronous Serial Bitstream Transport and RDD 6 Description and Guide to the Use of the Dolby E Audio Metadata Serial Bitstream.

```
DTAPI_RESULT DtAvInputStatus::GetDolbyMetadata
(
    [out] std::vector<DtRdd6Data>& Metadata;// Metadata read from SDI input
);
```

## **Function Arguments**

Metadata

Retrieved Dolby metadata.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Dolby metadata has been retrieved successfully.   |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.            |
| DTAPI_E_NOT_ATTACHED | Status object is not attached to a hardware port. |

### class DtAvOutput

Class to control and get status information from the HDMI output port.

## DtAvOutput::AttachToPort

Attach the DtAvOutput object to a specific physical port. Attachment can be exclusive (default) or shared.

## **Function Arguments**

pDtDvc

Pointer to the device object that represents a DekTec device. The device object must have been attached to the device hardware.

Port

Physical port number. Port number 4 on the DTA-2195 is the HDMI output port.

Exclusive

If false, request shared access. If true, request exclusive access. This is the default. For changing settings on the physical port, exclusive access is needed. Status retrieval can be done in non-exclusive mode. An error (DTAPI\_E\_EXCL\_ACCESS\_REQD) is returned if the output was attached non-exclusively but the function needs exclusive access.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Channel object has been attached successfully to the port                                    |
| DTAPI_E_ATTACHED     | Channel object is already attached   |
| DTAPI_E_DEVICE       | Pointer <i>pDtDvc</i> is not valid or the device object is not attached to a hardware device |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver  |
| DTAPI_E_IN_USE       | Another channel object is already attached to this port                                      |
| DTAPI_E_NO_DT_OUTPUT | Port is not an output  |
| DTAPI_E_NO_SUCH_PORT | Invalid port number for this device  |

# **DtAvOutput::Detach**

Detach the physical port from the DtAvOutput class. Frees resources allocated for the output class and restores all settings to the default values if exclusively attached.

DTAPI\_RESULT DtOutpChannel::Detach();

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| <u> </u>             | Channel object has been detached successfully from the hardware function        |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function, so it cannot be detached |

## **DtAvOutput::DisableHdmiEdidCheck**

If the HDMI EDID check is disabled, the driver will not check the supported features of the connected display (stored in the EDID data) and always put the SDI stream as is on the HDMI output. If the check is enabled, the driver will check the supported features of the connected display and tries to output the best format. E.g. when a 12G SDI signal is streamed to the SDI output by the software, but the monitor does not support 12G but only 3G, a 3G signal will be put on the HDMI output.

```
DTAPI_RESULT DtAvOutput::DisableHdmiEdidCheck(
   [in] bool Disable
);
```

## **Function Arguments**

Disable

If true, the EDID check is disabled and the SDI stream is put on the HDMI output as is. The user must be sure the display will not be damaged if a non-supported format is put on the HDMI output. The default value is false.

#### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The function has been executed successfully           |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |

#### Remarks

## DtAvOutput::DisableHdmiOutput

If the HDMI output is disabled, no data is put on the HDMI output and a connected display will go into sleep mode if supported by the display.

```
DTAPI_RESULT DtAvOutput::DisableHdmiOutput(
    [in] bool Disable
);
```

## **Function Arguments**

Disable

If true, the HDMI output is disabled and no data is put on the HDMI output. The default value is false.

#### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The function has been executed successfully           |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |

#### Remarks

# **DtAvOutput::ForceHdmiTestPicture**

If the HDMI test picture is forced, a test pattern is displayed on the HDMI output instead of the SDI output stream. The test picture will be displayed in the lowest resolution supported by each HDMI certified display.

```
DTAPI_RESULT DtAvOutput::ForceHdmiTestPicture(
    [in] bool Enable
);
```

## **Function Arguments**

Enable

If true, a test picture is displayed on the HDMI output port. The default value is false.

#### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The function has been executed successfully           |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |

#### Remarks

# **DtAvOutput::GetHdmiStatus**

Get the status of the HDMI output port and connected display.

```
DTAPI_RESULT DtAvOutput::GetHdmiStatus(
  [out] DtHdmiTxStatus& Status
);
```

## **Function Arguments**

Status

Returned status of the HDMI output port and connected monitor

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The Status value has been retrieved successfully      |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | This function is not supported for this port          |

# DtAvOutput::SetHdmiVideoMode

Sets the HDMI video mode to use.

```
DTAPI_RESULT DtAvOutput::SetHdmiVideoMode(
    [in] int VidMod
);
```

## **Function Arguments**

VidMod

New video mode to select. The default value is DTAPI\_HDMI\_VIDMOD\_YCBCR\_422

| Value                       | Meaning                |
|-----------------------------|------------------------|
| DTAPI_HDMI_VIDMOD_YCBCR_422 | YCbCr 4:2:2 video mode |
| DTAPI_HDMI_VIDMOD_YCBCR_444 | YCbCr 4:4:4 video mode |
| DTAPI_HDMI_VIDMOD_RGB_444   | RGB 4:4:4 video mode   |

#### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The video mode has been set successfully              |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |
| DTAPI_E_INVALID_ARG      | The VidMod parameter is invalid                       |

## **Remarks**

# **DtAvOutput::SetHdmiColorimetry**

Set the colorimetry values to be used in the Auxiliary Video Information (AVI) InfoFrame. InfoFrames are used for signaling auxiliary information to the attached display.

```
DTAPI_RESULT DtAvOutput::SetHdmiColorimetry(
   [in] int Colorimetry,
   [in] int ExtendedColorimetry);
```

### **Function Arguments**

Colorimetry

Colorimetry value. This is the value for the C0 and C1 bits in the AVI InfoFrame data byte 2. See the CEA-861 standard for details of these bits.

Default value is 0 (= No Data and extended colorimetry not used).

| Bit | CEA-861 naming |
|-----|----------------|
| 0   | C0             |
| 1   | C1             |

*ExtendedColorimetry* 

Extended Colorimetry value. This is the value for the EC0, EC1 and EC2 bits in the AVI InfoFrame data byte 3. See the CEA-861 standard for details of these values. Default value is 0.

| Bit | CEA-861 naming |
|-----|----------------|
| 0   | EC0            |
| 1   | EC1            |
| 2   | EC2            |

### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The colorimetry values has been set successfully      |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |

#### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

# **DtAvOutput::GetHdmiColorimetry**

Returns the current colorimetry values as used in the Auxiliary Video Information (AVI) InfoFrame.

```
DTAPI_RESULT DtAvOutput::GetHdmiColorimetry(
   [out] int& Colorimetry,
   [out] int& ExtendedColorimetry
);
```

## **Function Arguments**

Colorimetry

Colorimetry value. See the DtAvOutput::SetHdmiColorimetry function for details.

*ExtendedColorimetry* 

Extended Colorimetry value. See the DtAvOutput::SetHdmiColorimetry function for details.

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The colorimetry values has been retrieved successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | This function is not supported for this port           |

# **DtAvOutput::SetHdmiAudioChannel**

Selects the audio channels to be put on the HDMI output.

```
DTAPI_RESULT DtAvOutput::SetHdmiAudioChannel(
    [in] int AudioCh1,
    [in] int AudioCh2
);
```

### **Function Arguments**

AudioCh1

The first audio channel to be put on the HDMI output. The default value is 1.

AudioCh2

The second audio channel to be put on the HDMI output. The default value is 2.

### Result

| DTAPI_RESULT             | Meaning   |
|--------------------------|---|
| DTAPI_OK                 | The function has been executed successfully           |
| DTAPI_E_NOT_ATTACHED     | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED    | This function is not supported for this port          |
| DTAPI_E_EXCL_ACCESS_REQD | Exclusive access is required for this function.       |

### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

For 192 kHz audio data, AudioCh1 must be the first channel in the audio group of the first 192 kHz audio data. AudioCh2 must be the first channel in the audio group of the second 192 kHz audio data.

# **DtAvOutput::GetHdmiAudioChannel**

Returns the current selected audio channels on the HDMI output.

```
DTAPI_RESULT DtAvOutput::GetHdmiAudioChannel(
  [out] int& AudioCh1,
  [out] int& AudioCh2
);
```

## **Function Arguments**

AudioCh1

Selected channel audio channel 1.

AudioCh2

Selected channel audio channel 2.

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The selected audio channels has been retrieved successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function       |
| DTAPI_E_NOT_SUPPORTED | This function is not supported for this port                |

#### **DtDevice**

# DtDevice::AttachTolpAddr

Attach device object to the device hardware, based on the IP address of a DTE-31xx device.

```
DTAPI_RESULT DtDevice::AttachToIpAddr(
   [in] unsigned char Ip[4] // IP address
);
```

## **Function Arguments**

Ιp

IP address of the DTE-31xx to attach to.

### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | Device object has been attached successfully to the hardware |
| DTAPI_E_ATTACHED       | Device object is already attached to device hardware         |
| DTAPI_E_NO_DEVICE      | No DekTec devices found (at all)                             |
| DTAPI_E_NO_SUCH_DEVICE | A DTE-31xx with the IP address cannot be found               |

### **Remarks**

AttachToIpAddr is non-intrusive. No initialization actions are performed.

This method can only be applied to DTE-31xx devices.

# **DtDevice::AttachToSerial**

Attach device object to the device hardware, based on the serial number of the device.

# **Function Arguments**

Serial

Serial number of the DekTec device to attach to.

### Result

| DTAPI_RESULT           | Meaning   |
|------------------------|---|
| DTAPI_OK               | Device object has been attached successfully to the hardware  |
| DTAPI_E_ATTACHED       | Device object is already attached to device hardware  |
| DTAPI_E_DRIVER_INCOMP  | Version of device driver is incompatible with the DTAPI version, device driver needs to be upgraded |
| DTAPI_E_NO_DEVICE      | No DekTec devices found (at all)  |
| DTAPI_E_NO_SUCH_DEVICE | The device with the specified serial number could not be found                                      |

### **Remarks**

AttachToSerial is non-intrusive. No initialization actions are performed.

# **DtDevice::AttachToSlot**

Attach device object to a PCI Bus device, based on PCI-bus number and slot number.

```
DTAPI_RESULT DtDevice::AttachToSlot(
  [in] int PciBusNumber, // PCI-bus number
  [in] int SlotNumber // PCI-slot number
);
```

## **Function Arguments**

PciBusNumber, SlotNumber

PCI-bus number and slot number of the DekTec device to attach to.

### Result

| DTAPI_RESULT           | Meaning   |
|------------------------|---|
| DTAPI_OK               | Device object has been attached successfully to the hardware  |
| DTAPI_E_ATTACHED       | Device object is already attached to a PCI card   |
| DTAPI_E_NO_DTA_CARD    | No DekTec PCI cards found (at all)  |
| DTAPI_E_NO_SUCH_DEVICE | No DekTec DTA-1xx PCI card found in the specified slot, or the slot is empty                        |
| DTAPI_E_DRIVER_INCOMP  | Version of device driver is incompatible with the DTAPI version, device driver needs to be upgraded |

### **Remarks**

AttachToSlot is non-intrusive. No initialization actions are performed.

This method cannot be applied to USB devices. Use AttachToSerial or AttachToType instead.

# **DtDevice::AttachToType**

Attach device object to the device hardware, based on the type number of the device.

### **Function Arguments**

TypeNumber

Integer value representing the type number of the device to attach to. The integer corresponds to the number in the hardware's type string, e.g. 2160 for the DTA-2160 or 245 for DTU-245.

DeviceNo

If the system contains multiple devices of the same type, this index number distinguishes between the various devices. DeviceNo of the first device is 0, the next device 1, and so on.

#### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | Device object has been attached successfully to the hardware   |
| DTAPI_E_ATTACHED       | Device object is already attached to device hardware   |
| DTAPI_E_NO_DEVICE      | No DekTec devices found (at all)   |
| DTAPI_E_NO_SUCH_DEVICE | No device with type <code>Typenumber</code> is found in this system, or the number of devices of this type is less-or-equal than <code>DeviceNo</code> |
| DTAPI_E_DRIVER_INCOMP  | Version of device driver is incompatible with the DTAPI version, device driver needs to be upgraded  |

### **Remarks**

AttachToType is non-intrusive. No initialization actions are performed.

# **DtDevice::ClearGpsErrors()**

Clear the GPS clock input signal error flags. See GetGpsStatus for the list of error flags.

```
DTAPI_RESULT DtDevice::ClearGpsErrors();
```

# **Function Arguments**

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Flags have been cleared successfully   |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware   |
| DTAPI_E_NOT_SUPPORTED | The device does not support GPS clock signal input. It does not have capability DTAPI_CAP_GPSTIME. |

# **DtDevice::Detach**

Detach device object from device hardware.

# **Function Arguments**

### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Device object has been detached successfully from the device hardware      |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware, so it cannot be detached |

## **Remarks**

Event subscribers will be automatically unsubscribed.

# DtDevice::DetectIoStd

Detect the video standard of the signal currently applied to an input port.

#### **Parameters**

Port

Physical port number of the port to detect the video standard for.

Value/SubValue

Returns the detected video standard. The values can be used via Refer to SetIoConfig(Port, DTAPI\_IOCONFIG\_IOSTD, Value, SubValue) to set the input video standard for a specific port. See SetIoConfig() for more information.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Call succeeded  |
| DTAPI_E_NOT_SUPPORTED | Detection of video standard is not supported for current device |
| DTAPI_E_DEV_DRIVER    | Unexpected driver error   |

### **Remarks**

This function is only supported by cards having the Matrix capability.

# DtDevice::DetectVidStd

DtDevice::DetectVidStd method is deprecated. The DtAvInputStatus::DetectVidStd is the successor.

Detect the video standard and link nr of the signal currently applied to an input port.

#### **Parameters**

Port

Physical port number of the port to detect the video standard for.

Info

Returns information about the detected video standard.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Call succeeded  |
| DTAPI_E_NOT_SUPPORTED | Detection of video standard is not supported for current device |
| DTAPI_E_DEV_DRIVER    | Unexpected driver error   |

#### **Remarks**

This function is only supported by cards having the Matrix2, SdiRx or Hdmi capability.

# **DtDevice::FlashDisplay**

Flash the LCD display of a DTE-31xx a number of times. With this function, a configuration tool can alert a user to a particular DTE-31xx unit.

### **Function Arguments**

NumFlashes

Number of times to flash the display.

OnTime, OffTime

Time in ms the LCD display has to be on/off for one flash.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | A 'flash display' command has been sent to the DTE-31xx       |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to a DTE-31xx                   |
| DTAPI_E_NOT_SUPPORTED | The device is not a DTE-31xx, or a DTE-31xx without a display |

# **DtDevice::GetAttribute**

Get the value of an attribute for a port of this device.

### **Function Arguments**

Port

Physical port number of the port for which to retrieve the attribute.

AttrId

Identifies the attribute that is to be retrieved.

| Value                         | Applicable to                        | Meaning  |
|-------------------------------|--------------------------------------|--|
| DTAPI_ATTR_LEVEL<br>_MAX      | Modulator port                       | Maximum output level in tenth of a dBm. For OFDM modes, the maximum output level is 3dB less.  |
| DTAPI_ATTR_LEVEL<br>_RANGE    | Modulator port                       | Output-level range in tenth of a dB.   |
| DTAPI_ATTR_RFFRE<br>Q_ABSMAX  | Modulator port /<br>Demodulator port | Absolute maximum output frequency in MHz supported by the hardware. Frequencies between <b>RFFREQ_MAX</b> and <b>RFFREQ_ABSMAX</b> may work, but are not guaranteed to work.   |
| DTAPI_ATTR_RFFRE<br>Q_ABSMIN  | Modulator port /<br>Demodulator port | Absolute minimum output frequency in MHz supported by the hardware. Frequencies between <b>RFFREQ_ABSMIN</b> and <b>RFFREQ_MIN</b> may work, but are not guaranteed to work.   |
| DTAPI_ATTR_RFFRE<br>Q_MAX     | Modulator port /<br>Demodulator port | Maximum supported output frequency in MHz.   |
| DTAPI_ATTR_RFFRE<br>Q_MIN     | Modulator port /<br>Demodulator port | Minimum supported output frequency in MHz.   |
| DTAPI_ATTR_SAMPR<br>HW_ABSMAX | Modulator port                       | Absolute maximum sample rate supported by the hardware. The device hardware may work for sample rates between <code>samprhw_max</code> and <code>samprhw_absmax</code> , but performance specifications are not guaranteed.  If <code>samprhw_max</code> equals <code>samprhw_absmax</code> , sample rate conversion is used for sample rates above <code>samprhw_max</code> . |
| DTAPI_ATTR_SAMPR<br>HW_ABSMIN | Modulator port                       | Absolute minimum sample rate supported by the hardware. The device hardware may work for sample rates between <pre>SAMPRHW_ABSMIN</pre> and SAMPRHW_MIN, but performance specifications are not guaranteed. If SAMPRHW_MIN equals SAMPRHW_ABSMIN, sample rate conver-  |

|                                |                | sion is used for sample rates below <b>SAMPRHW_MIN</b> .  |
|--------------------------------|----------------|---|
| DTAPI_ATTR_SAMPR<br>HW_HARDLIM | Modulator port |   |
| DTAPI_ATTR_SAMPR<br>HW_MAX     | Modulator port | Maximum sample rate for which performance specifications are guaranteed.  |
| DTAPI_ATTR_SAMPR<br>HW_MIN     | Modulator port | Minimum sample rate for which performance specifications are guaranteed.  |
| DTAPI_ATTR_SAMPR<br>ATE_ABSMAX | Modulator port | Absolute maximum sample rate that is supported. The signal must be band-limited, otherwise signal frequencies between <pre>SAMPRHW_MAX/2</pre> and <pre>SAMPRATE_MAX/2</pre> are muted and may even fold back (alias) into the main band. |
| DTAPI_ATTR_SAMPR<br>ATE_ABSMIN | Modulator port | Absolute minimum sample rate that is supported.   |
| DTAPI_ATTR_SAMPR<br>ATE_MAX    | Modulator port | Maximum sample rate for which performance specifications are guaranteed.  |
| DTAPI_ATTR_SAMPR<br>ATE_MIN    | Modulator port | Minimum sample rate for which performance specifications are guaranteed.  |
| DTAPI_ATTR_NUM_F<br>ANS        | Device-level   | The number of fans on the device.   |
| DTAPI_ATTR_NUM_T<br>EMP_SENS   | Device-level   | The number of temperature sensors on the device.  |

# Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The attribute value has been retrieved successfully |
| DTAPI_E_NO_SUCH_PORT  | Invalid port number for this device                 |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware    |
| DTAPI_E_NOT_SUPPORTED | The attribute is not supported for this device      |

# **DtDevice::GetDescriptor**

Get device descriptor.

## **Function Arguments**

DvcDesc

Output argument that receives the device descriptor.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | The device descriptor has been retrieved successfully |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware      |

# **DtDevice::GetDeviceDriverVersion**

Get device-driver version information.

### **Function Arguments**

Major

Major version number of the device driver used to access the device hardware. This number is incremented for major functional upgrades of the device driver.

Minor

The minor version number is incremented for small functional increments of the device driver.

BugFix

The bug-fix version number is incremented when a bug in the device driver is fixed, without functional enhancements.

Build

Build number.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Version numbers have been retrieved successfully |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver            |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware |

### **Remarks**

This function cannot be used to obtain hardware versioning information. Use **vpdRead** instead.

# **DtDevice::GetDisplayName**

Get the name displayed on the LCD status display of a DTE-31xx.

### **Function Arguments**

pName

Pointer to the character array that receives the displayed name. The character array must be allocated before calling **GetDisplayName**. The **DTAPI** limits the maximum length of a name including the null-terminator to 16 characters, so a 16-char array suffices.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Version numbers have been retrieved successfully |
| DTAPI_E_NOT_SUPPORTED | The device does not have a status display        |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware |

# **DtDevice::GetFanSpeed**

Get the current fan speed in rpm.

```
DTAPI_RESULT DtDevice::GetFanSpeed(
   [in] int    Fan
   [out] int& Rpm
);
```

## **Function Arguments**

Far

1-based index of the fan to get the speed of.

Rpm

The speed of the fan.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Fan speed has been retrieved successfully.        |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.            |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware. |

# **DtDevice::GetFirmwgreVersion**

Get version number of the firmware loaded on the device.

```
DTAPI_RESULT DtDevice::GetFirmwareVersion(
  [out] int& FirmwareVersion
);
```

# **Function Arguments**

FirmwareVersion

Single number that identifies the version of the FPGA- and/or embedded software on the device.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Firmware version has been retrieved successfully. |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.            |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware. |

# DtDevice::GetGenlockState

Get the state and the detected video standard currently applied to the specified reference source ("genlock") input port.

### **Function Arguments**

State

Returns the genlock state of the on-board video clock generator.

| Value              | Meaning   |
|--------------------|---|
| DTAPI_GENL_NO_REF  | No reference input signal is detected on the reference source input port, or the configured reference video standard (with <code>ioConfig</code> ) is inconsistent with the applied video standard. |
| DTAPI_GENL_LOCKING | A valid reference input signal is detected on the reference source input and internal PLLs are locking to it.   |
| DTAPI_GENL_LOCKED  | Full clock-lock has been achieved.  |

RefVidStd

Returns the video standard configured for the reference source (with SetIoConfig). Refer to spreadsheet CapList.xlsx, sheet IO Capabilities, group IOSTD, for a list of all supported values.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Genlock state has been returned.                        |
| DTAPI_E_DEV_DRIVER    | Unexpected driver error.                                |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware.       |
| DTAPI_E_NOT_SUPPORTED | This function is not supported by the current hardware. |

#### **Remarks**

The genlock port is configured with SetIoConfig.

# **DtDevice::GetGpsStatus**

Get the current GPS input clock signal status and errors flags.

## **Function Arguments**

Status

Returns the status of the on-board clock reference.

| Value                | Meaning                                  |
|----------------------|--|
| DTAPI_GPS_10MHZ_SYNC | Synchronized with 10MHz GPS clock signal |
| DTAPI_GPS_1PPS_SYNC  | Synchronized with 1PPS input signal      |

Error

Returns the GPS input clock signal error flag.

| Value                         | Meaning                                  |
|-------------------------------|--|
| DTAPI_GPS_1PPS_ERROR          | 1PPS synchronization error(s) occurred   |
| DTAPI_GPS_10MHZ_OUT_RAN<br>GE | 10MHz input clock signal is out of range |
| DTAPI_GPS_10MHZ_NO_SIGN<br>AL | 10MHz input clock signal is absent       |

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Status has been retrieved successfully   |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware   |
| DTAPI_E_NOT_SUPPORTED | The device does not support GPS clock signal input. It does not have capability <b>DTAPI_CAP_GPSTIME</b> . |

# **DtDevice::GetGpsTime**

Get the current GPS-time in nanoseconds since last 1PPS.

# **Function Arguments**

GpsTime

Returns the current GPS-time in nanoseconds since last 1PPS.

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | GPS-time has been retrieved successfully   |
| DTAPI_E_NO_GPSCLKREF  | 10MHz GPS input clock signal is absent   |
| DTAPI_E_NO_GPSSYNC    | The on-board clock reference is not (yet) synchronized with the GPS input clock signals                    |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware   |
| DTAPI_E_NOT_SUPPORTED | The device does not support GPS clock signal input. It does not have capability <b>DTAPI_CAP_GPSTIME</b> . |

# **DtDevice::GetIoConfig**

Get the I/O configuration of the specified port.

### **Function Arguments**

Port

Physical port number.

Group, Value, SubValue, ParXtra0, ParXtra1 I/O configuration parameters, see SetIoConfig.

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | I/O configuration has been read successfully   |
| DTAPI_E_NO_SUCH_PORT   | Invalid port number for this device  |
| DTAPI_E_NOT_ATTACHED   | Device object is not attached to device hardware   |
| DTAPI_E_NOT_SUPPORTED  | The method is applied to either another device rather than a DTA-2137 or an invalid port number is given           |
| DTAPI_E_FIRMW_INCOMP   | The firmware is incompatible, please upgrade the firmware  |
| DTAPI_E_SERVICE_INCOMP | The DTAPI service needs to be updated  |
| DTAPI_E_INVALID_MODE   | For IoConfig DTAPI_IOCONFIG_S2LOOPMODE: The configuration of the corresponding ASI port is not in loop-though mode |

# **DtDevice::GetNwSpeed**

Get the speed of the network link.

### **Function Arguments**

Port

Physical port number.

Enable

Output argument that is set to *true* if the network port is forced to the specified Speed with the DtDevice::SetNwSpeed function.

Speed

Current link speed.

| Value                    | Meaning              |
|--------------------------|----------------------|
| DTAPI_NWSPEED_NOLIN      | Link not connected   |
| DTAPI_NWSPEED_10MB_HALF  | 10Mbps, half duplex  |
| DTAPI_NWSPEED_10MB_FULL  | 10Mbps, full duplex  |
| DTAPI_NWSPEED_100MB_HALF | 100Mbps, half duplex |
| DTAPI_NWSPEED_100MB_FULL | 100Mbps, full duplex |
| DTAPI_NWSPEED_100MB_FULL | 100Mbps, full duplex |
| DTAPI_NWSPEED_1GB_MASTER | 1Gbps in master mode |
| DTAPI_NWSPEED_1GB_SLAVE  | 1Gbps in slave mode  |

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Network speed has been retrieved successfully    |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver            |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware |
| DTAPI_E_NOT_SUPPORTED | The device is not a network port                 |

# **DtDevice::GetPowerStatus**

Get the power status of a device.

## **Function Arguments**

Status

Current power status.

| Value                      | Meaning                     |
|----------------------------|-----------------------------|
| DTAPI_POWER_STATUS_OK      | Device is powered correctly |
| DTAPI_POWER_EXT_12V_ABSENT | External 12V is absent      |

## Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Device power status has been retrieved successfully |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver               |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware    |
| DTAPI_E_NOT_SUPPORTED | The device is not supported by this method          |

### **Remarks**

Currently only the DTA-2180 is supported by this method.

# DtDevice::GetRefClkCnt

Get a sample of the reference-clock counter on the device.

## **Function Arguments**

RefClkCnt

Sample of the 32-bit reference clock counter.

RefClkFreqHz

Clock frequency of the reference clock in Hz.

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Sample has been retrieved successfully   |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver  |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware                                 |
| DTAPI_E_NOT_SUPPORTED | The device does not support retrieval of a sample of the reference-clock counter |

### **Remarks**

This method is supported on the following devices:

| Device Type Number | Clock Frequency                                 |
|--------------------|---|
| DTA-105            | 54.0MHz   |
| DTA-107(S2)        | 25.0MHz   |
| DTA-110(T)         | 25.0MHz   |
| DTA-115            | 54.0MHz   |
| DTA-120            | 40.5MHz (FW Version ≥ 4)                        |
| DTA-122            | 27.0MHz (FW Version ≥ 4)                        |
| DTA-124            | 40.5Mhz (FW Version 0) / 54MHz (FW Version ≥ 1) |
| DTA-140            | 40.5MHz (FW Version ≥ 1)                        |
| DTA-145            | 54.0MHz   |

| DTA-160  | 54.0MHz |
|----------|---------|
| DTA-2135 | 54.0MHz |
| DTA-2144 | 54.0MHz |
| DTA-2145 | 54.0MHz |
| DTE-3100 | 54.0MHz |
| DTE-3120 | 54.0MHz |

Some devices (e.g. DTU-225 and DTU-245) that have a reference-clock counter, do not allow access to their reference-clock counter (i.e. this method will return <code>DTAPI\_E\_NOT\_SUPPORTED</code>). For these devices it is possible to determine the running frequency of their on-board reference-clock counter via the <code>DtDevice::GetRefClkFreq</code> method.

# DtDevice::GetRefClkFreq

Get the frequency of the on-board reference clock.

```
DTAPI_RESULT DtDevice::GetRefClkFreq(
  [out] int& RefClkFreqHz // Clock frequency of the reference clock
);
```

## **Function Arguments**

RefClkFreqHz

Clock frequency of the reference clock in Hz.

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Sample has been retrieved successfully                               |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                                |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware                     |
| DTAPI_E_NOT_SUPPORTED | The device does not support getting of the reference-clock frequency |

#### **Remarks**

Amongst other purposes the on-board reference-clock counter is used for assigning arrival timestamps to the incoming data (see DtInpChannel::SetRxMode). By calling this method one can determine the running frequency of the reference-clock counter used for assigning the arrival timestamps.

Next to the devices mentioned in the description of the DtDevice::GetRefClkCnt method, this method supports the following devices:

| Device Type Number | Clock Frequency                                 |
|--------------------|---|
| DTU-225            | 48Mhz (FW Version < 5) / 54MHz (FW Version ≥ 5) |
| DTU-245            | 48Mhz (FW Version < 5) / 54MHz (FW Version ≥ 5) |

# **DtDevice::GetTemperature**

Get the current temperature of a sensor in degrees Celsius.

```
DTAPI_RESULT DtDevice::GetTemperature(
   [in] int    TempSens
   [out] int& Temp
);
```

# **Function Arguments**

TempSens

1-based index of the temperature sensor to get the temperature of.

Temp

The current temperature of the device near the given sensor.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Temperature has been read successfully.           |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver.            |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware. |

# **DtDevice::GetUsbSpeed**

Get the speed (e.g. full or high speed) of the USB bus.

```
DTAPI_RESULT DtDevice::GetUsbSpeed(
  [out] int& UsbSpeed
);
```

### **Function Arguments**

*UsbSpeed* 

Current speed of the USB bus the device is connected to.

| Value                | Meaning                                       |
|----------------------|---|
| DTAPI_USB_FULL_SPEED | USB bus operates at full speed (max. 12Mbps)  |
| DTAPI_USB_HIGH_SPEED | USB bus operates at high speed (max. 480Mbps) |

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | USB speed has been retrieved successfully                |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                    |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware         |
| DTAPI_E_NOT_SUPPORTED | The device does not support the getting of the USB speed |

### **Remarks**

Use this method to determine if the USB device is connected to a USB bus operating in full or high speed mode. A USB bus operating at full speed usually indicates that the DTU-2XX device is connected to a USB-1 bus<sup>2</sup>. High speed is only supported by USB-2 buses.

USB "full speed" limits the maximum input/output bit-rate supported by the DTU-2XX devices to 8Mbps. To be able to use the DTU-2XX for bit-rates higher than 8Mbps a USB-2 bus operating at high speed should be used.

This method is only supported by the DTU-2XX devices.

-

<sup>&</sup>lt;sup>2</sup> USB-2 buses can operate in full-speed mode for backward compatibility reasons (support for USB-1 devices)

# DtDevice::GetVcxoState

Get the state of the on-board VCXO.

# **Function Arguments**

Enable

Indicates whether the VCXO is enabled or disabled.

Lock

Current genlock state.

| Value                | Meaning   |
|----------------------|---|
| DTAPI_GENLOCK_INLOCK | The VCXO is genlocked to a SDI reference signal |
| DTAPI_GENLOCK_NOLOCK | The VCXO is not genlocked to a SDI signal       |

*VcxoClkFreqHz* 

Measured VCXO frequency in Hz.

### Result

| DTAPI_RESULT          | Meaning                                   |
|-----------------------|---|
| DTAPI_OK              | State has been retrieved successfully     |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver     |
| DTAPI_E_NOT_SUPPORTED | The device does not support this function |

## **DtDevice::HwFuncScan**

Scan hardware functions hosted by this device.

# **Function Arguments**

NumEntries

Specifies the size, in number of DtHwFuncDesc entries, of the caller-supplied pHwFuncs array.

NumEntriesResult

Output argument that receives the number of hardware functions found and described in pHwFuncs. The value of this argument can be greater than NumEntries (when DtapiHwFuncScan returns DTAPI E BUFFER TOO SMALL).

pHwFuncs

Pointer to a caller-supplied array of **DtHwFuncDesc** entries to receive the hardware-function descriptors. A NULL pointer may be supplied, but only if *NumEntries* is 0.

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Scan has completed successfully and the <i>pHwFuncs</i> array was large enough to contain all function descriptions.                 |
| DTAPI_E_BUF_TOO_SMALL | The number of function-description entries in pHwFuncs is too small. The number of entries required is returned in NumEntriesResult. |
| DTAPI_E_INVALID_BUF   | A NULL pointer was supplied to pHwFuncs while NumEntries is greater than 0.  |

#### **Remarks**

This function is the equivalent of ::DtapiHwFuncScan for a single device.

**DtDevice::HwFuncScan** function may have to be called twice. The first time, *NumEntries* should be set to a best-guess maximum value. If the result status is **DTAPI\_E\_BUF\_TOO\_SMALL**, the application should free the current array of **DtHwFuncDesc** entries, allocate a new array with the number of entries returned in *NumEntriesResult*, and call **DtapiHwFuncScan** again.

Another method is to start with setting *pHwFuncs* to NULL and *NumEntries* to 0. The number of required hardware-function entries will be returned, after which *pHwFuncs* can be allocated with the right size and **DtapiHwFuncScan** called again.

# **DtDevice::LedControl**

Take direct control of the device's general-status LED, or let the hardware drive the LED.

### **Function Arguments**

LedControl

Controls status of the LED.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_LED_HARDWARE | Hardware drives the LED (default after power up) |
| DTAPI_LED_OFF      | LED is forced to off-state                       |
| DTAPI_LED_GREEN    | LED is forced to green-state                     |
| DTAPI_LED_RED      | LED is forced to red-state                       |
| DTAPI_LED_YELLOW   | LED is forced to yellow-state                    |

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | LED setting has been accepted                    |
| DTAPI_E_INVALID_MODE  | The specified LED-control value is invalid       |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware |
| DTAPI_E_NOT_SUPPORTED | The device does not have a general-status LED    |

### **Remarks**

When a device object is detached from the device hardware, all direct-control settings are released (LED control is reset to **DTAPI\_LED\_HARDWARE**).

The DTA-120, DTA-122 and DTA-140 each have a single LED, which can be controlled by either this method (DtDevice::LedControl) or by DtInpChannel::LedControl. If both methods are applied in parallel, DtDevice::LedControl has precedence over DtInpChannel::LedControl.

## **DtDevice::RebootFirmware**

Reboots the firmware of a DekTec device, identified by the serial number of the device. This method is intended to be used after a firmware upgrade. The new firmware is activated without power cycling the system.

## **Function Arguments**

Serial

Serial number of the DekTec device

#### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | Reboot of device firmware is performed successfully  |
| DTAPI_E_IN_USE         | The device with the specified serial number is in use  |
| DTAPI_E_NO_SUCH_DEVICE | The device with the specified serial number could not be found   |
| DTAPI_E_NOT_SUPPORTED  | The device doesn't support firmware reboot, you need to power cycle the system   |
| DTAPI_E_RESTART_REQD   | The reboot of the firmware is not completed, you need to restart<br>the system or restart the driver of this device. A power cycle is<br>not required. |

### **Remarks**

The **RebootFirmware** method requires <u>no</u> application is attached to this device or its ports. For this reason it is a static method.

For Linux an extra (manual) driver stop, wait 1 sec and driver start action is required when **DTAPI E RESTART REQD** is returned (for Windows this action is done by the DtapiService).

# DtDevice::RegisterCallback

Register to one or multiple events and define the callback function.

```
DTAPI_RESULT DtDevice::RegisterCallback(

[in] pDtEventCallback Callback // Callback for occurred events

[in] void* pContext // Opaque pointer passed to callback

[in] int EventTypes // Events to subscribe to (OR-able)

[out] void** pId // Subscription identifier

);
```

### **Function Arguments**

Callback

Pointer to the user-provided callback function that will be called when an event occurred.

pContext

Opaque pointer that is passed to the callback function.

EventTypes

Specifies the events to subscribe to. The events may be OR-ed together.

#### Device events:

| Event                  | Meaning  |
|------------------------|--|
| DT_EVENT_TYPE_POWER    | A device power up or power down has been occurred. |
| DT_EVENT_TYPE_GENLOCK  | The genlock state of the device has changed.       |
| DT_EVENT_TYPE_IOCONFIG | One or more IoConfigs have been changed.           |

pId

Pointer to the event subscription identifier.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Callback function has been attached successfully to the event(s)                       |
| DTAPI_E_INVALID_TYPE | The EventTypes argument contains invalid event types.                                  |
| DTAPI_E_INVALID_ARG  | The value of one of the arguments is invalid, and no specific other error code applies |
| DTAPI_E_OUT_OF_MEM   | Event watcher cannot be allocated  |

# **DtDevice::SetDisplayName**

Set the name on the LCD status display of a DTE-31xx device.

### **Function Arguments**

pName

Null-terminated character string specifying the name to be displayed on the LCD status display of the device.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Version numbers have been retrieved successfully |
| DTAPI_E_NOT_SUPPORTED | The device does not have a status display        |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware |

# **DtDevice::SetIoConfig**

Configure a physical port that supports certain configurable "I/O capabilities". An overview of the I/O capabilities and the DekTec devices supporting them can be found in spreadsheet CapList.xlsx, sheet IO Capabilities, which is part of the DTAPI user documentation.

On Windows, the I/O configuration settings are persisted in the registry, and automatically reloaded after a reboot. On Linux, applications have to implement their own persistency.

Two overloads are defined, one to configure a single port and another to configure a number of ports in one operation. It is mandatory to use the latter overload if there are dependencies between the ports, so that the ports must be configured at the same time.

### **Function Arguments**

pIoConfigs, Count

Array of I/O configuration parameters per port. Count is the number of array elements.

Port.

Physical port number.

```
Group, Value, SubValue, ParXtra0, ParXtra1
```

Specifies the I/O configuration parameters. Refer to spreadsheet CapList.xlsx, sheet IO Capabilities for details. In this sheet, Cap corresponds to Value, while SubCap corresponds to SubValue. Some additional explanation on a subset of the I/O configuration settings is provided below.

#### **Group BOOLIO**

I/O capabilities in group **BOOLIO** have a Boolean *Value* argument.

| Value                | Meaning                    |
|----------------------|----------------------------|
| DTAPI_IOCONFIG_TRUE  | Enable the I/O capability  |
| DTAPI_IOCONFIG_FALSE | Disable the I/O capabitity |

#### **Boolean I/O Capability FAILSAFE**

If DTAPI\_IOCONFIG\_FAILSAFE for an output port is set to TRUE, that port is put in "failsafe" mode, protected by a "watchdog". This means that the user application has to call DtOutpChannel::SetFailsafeAlive repeatedly within the watchdog timeout period. If the user application is too late (e.g. due to a crash), the watchdog times out and the failsafe relay is released so that the output is connected directly to the input. Failsafe mode is implemented

on the DTA-145 and the DTA-2145. On these cards, if the watchdog triggers, the input signal on port #1 will be physically connected to port #2 through a relay.

I/O configuration parameter ParXtra0 specifies the watchdog time out in milliseconds.

### **Boolean I/O Capability GENLOCKED**

If set, the output port will lock the SDI output timing to the genlock input. If the application fails to write data to the channel in time, black frames are inserted to maintain synchronization.

### **Boolean I/O Capability GENREF**

If set, the input port will act as an SDI genlock reference input. I/O configuration parameter ParXtra0 specifies the expected video standard, e.g. **DTAPI IOCONFIG 1080I50**.

### **Boolean I/O Capability SWS2APSK**

DTA-2137 only: Enable DVB-S2 reception in 16-APSK or 32-APSK mode.

This I/O capability can only be enabled on port 1; port 2 must be disabled. The board can only receive a single channel when this I/O capability is enabled. Without SWS2APSK, two channels are available.

### I/O Capability IODIR, OUTPUT for the DTA-2137

The DTA-2137 supports two specific I/O capabilities for looping through the received DVB-S2 stream on one of the ASI ports:

**DTAPI\_IOCONFIG\_LOOPS2L3** encapsulates DVB-S2 baseband frames (BBFRAMEs) in L3 frames and outputs them on the ASI port.

**DTAPI\_IOCONFIG\_LOOPS2TS** selects a sub stream from a DVB-S2 Multiple Input Stream, based on ISI (specified in *ParXtra1*). The selected stream can be an MPEG2 transport stream or any other input stream type. It is output on the ASI port.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Channel type has been set successfully  |
| DTAPI_E_ATTACHED      | Cannot change I/O configuration because a channel object is attached to this port                       |
| DTAPI_E_DEV_DRIVER    | Driver was not able to set the I/O configuration  |
| DTAPI_E_FIRMW_INCOMP  | The firmware is incompatible  |
| DTAPI_E_INVALID_ARG   | The value of one of the arguments is invalid, and no specific other error code applies                  |
| DTAPI_E_INVALID_ISI   | For <b>DTAPI_IOCONFIG_LOOPS2TS</b> only: An invalid value for ISI is specified. The valid range is 0255 |
| DTAPI_E_INVALID_MODE  | Invalid setting for I/O configuration   |
| DTAPI_E_NO_SUCH_PORT  | Invalid port number for this device   |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware  |
| DTAPI_E_NOT_SUPPORTED | The I/O configuration option is not supported   |

DTAPI\_E\_SERVICE\_INCOMP The DTAPI service needs to be updated

## Remarks

The I/O configuration of a port can only be changed when the underlying device is attached to a <code>DtDevice</code> object.

## **DtDevice::SetLicenseFromFile**

Programs licenses from a file on a DekTec device.

```
DTAPI_RESULT DtDevice::SetLicenseFromFile (
  [in] const std::wstring& LicFilename, // The license file
  [in] bool Force=false // Allow existing licenses to be removed
);
```

### **Function Arguments**

LicFilename

String containing the name of the license file to be programmed on the device.

Force

If false, the licenses from the file will only be programmed on the DekTec device if no existing licenses will be removed. It will return an error (DTAPI\_E\_LICENSE) in case existing licenses would be removed during programming.

If true, the licenses from the file will be programmed on the DekTec device regardless of the existing licenses.

#### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | The licenses have been programmed successfully   |
| DTAPI_E_FILE_OPEN      | Couldn't not open the specified license file   |
| DTAPI_E_NO_SUCH_DEVICE | License is not intended for the attached device  |
| DTAPI_E_NOT_ATTACHED   | Device object is not attached to device hardware   |
| DTAPI_E_LICENSE        | License string contains invalid licenses or would remove existing licenses on the device |
| DTAPI_E_XML_ELEM       | A required element in the XML license string is missing at the expected location         |
| DTAPI_E_XML_SYNTAX     | The XML license string is not well-formed XML  |

# **DtDevice::SetLicenseFromString**

Programs licenses from a string on a DekTec device.

```
DTAPI_RESULT DtDevice::SetLicenseFromString (
   [in] const std::wstring& LicString, // The license string
   [in] bool Force=false // Allow existing licenses to be removed
);
```

### **Function Arguments**

LicString

String containing licenses to be programmed on the device.

Force

If false, the licenses will only be programmed on the DekTec device if no existing licenses will be removed. It will return an error (DTAPI\_E\_LICENSE) in case existing licenses would be removed during programming.

If true, the licenses will be programmed on the DekTec device regardless of the existing licenses

#### Result

| DTAPI_RESULT           | Meaning  |
|------------------------|--|
| DTAPI_OK               | The licenses have been programmed successfully   |
| DTAPI_E_NO_SUCH_DEVICE | License is not intended for the attached device  |
| DTAPI_E_NOT_ATTACHED   | Device object is not attached to device hardware   |
| DTAPI_E_LICENSE        | License string contains invalid licenses or would remove existing licenses on the device |
| DTAPI_E_XML_ELEM       | A required element in the XML license string is missing at the expected location         |
| DTAPI_E_XML_SYNTAX     | The XML license string is not well-formed XML  |

# **DtDevice::SetNwSpeed**

Set the speed of a network link.

## **Function Arguments**

Port

Physical port number.

Enable

Enable (true) or disable (false) forcing the speed of the network port. If set to disable, the Speed argument is not used.

Speed

Link speed.

| Value                    | Meaning                              |
|--------------------------|--------------------------------------|
| DTAPI_NWSPEED_AUTO       | Automatically set network link speed |
| DTAPI_NWSPEED_10MB_HALF  | 10Mbps, half duplex                  |
| DTAPI_NWSPEED_10MB_FULL  | 10Mbps, full duplex                  |
| DTAPI_NWSPEED_100MB_HALF | 100Mbps, half duplex                 |
| DTAPI_NWSPEED_100MB_FULL | 100Mbps, full duplex                 |
| DTAPI_NWSPEED_100MB_FULL | 100Mbps, full duplex                 |
| DTAPI_NWSPEED_1GB_MASTER | 1Gbps in master mode                 |
| DTAPI_NWSPEED_1GB_SLAVE  | 1Gbps in slave mode                  |

### Result

| DTAPI_RESULT          | Meaning  |  |
|-----------------------|--|--|
| DTAPI_OK              | Network speed has been retrieved successfully    |  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver            |  |
| DTAPI_E_INVALID_ARG   | Device object is not attached to device hardware |  |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware |  |
| DTAPI_E_NOT_SUPPORTED | The device is not a network port                 |  |

# **DtDevice::UnregisterCallback**

Unregister to the one or multiple events.

## **Function Arguments**

pId

Pointer to the event subscription identifier given by DtDevice::RegisterCallback.

### Result

| DTAPI_RESULT            | Meaning  |
|-------------------------|--|
| DTAPI_OK                | Callback function has been successfully unregistered.                                  |
|                         | The value of one of the arguments is invalid, and no specific other error code applies |
| DTAPI_E_NOT_INITIALIZED | No callback functions for events have been registered                                  |

# **DtDevice::VpdDelete**

Delete a Vital-Product Data (VPD) item from the VPD read/write section in the serial EEPROM on the device.

### **Function Arguments**

pTag

Null-terminated character string identifying the VPD item to be deleted.

### Result

| DTAPI_RESULT         | Meaning  |  |
|----------------------|--|--|
| DTAPI_OK             | VPD item has been deleted successfully                   |  |
| DTAPI_E_EEPROM_READ  | A read operation from the serial EEPROM did not succeed  |  |
| DTAPI_E_EEPROM_WRITE | The write operation to the serial EEPROM did not succeed |  |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware         |  |
| DTAPI_E_NOT_FOUND    | The VPD item could not be found                          |  |
| DTAPI_E_READ_ONLY    | An attempt was made to delete a read-only VPD item       |  |

### **Remarks**

If a VPD item with the specified keyword already exists, that item is overwritten, unless it is a read-only item. In the latter case, **DTAPI\_E\_READ\_ONLY** is returned.

The size of the VPD read/write segment is 256 bytes. Writing to the serial EEPROM is a relatively slow operation.

# **DtDevice::VpdRead**

Read a Vital-Product Data (VPD) item from the EEPROM on the device.

### **Function Arguments**

pTag

Null-terminated character string identifying the VPD item to be read. The keyword must consist of either two characters, or it should be the special string "VPDID".

The table below lists standard keywords supported by DekTec devices. Next to these standard keywords, custom VPD keywords can be created with **vpdWrite**.

| Value   | Meaning  |
|---------|--|
| "VPDID" | Pseudo value to retrieve the VPD ID String, e.g. "DTA-100 DVB-ASI-C Output 0150 Mbps".   |
| "CL"    | Customer ID  |
| "EC"    | Engineering Change level. Identifies the hardware revision level of the device, e.g. "Rev 1".  |
| "MN"    | Manufacture ID DekTec-internal code identifying the manufacturer of the hardware.  |
| "PD"    | Production Date, e.g. "2003.07"  |
| "PN"    | Part Number, e.g. "DTU-225"  |
| "SN"    | Serial Number<br>E.g. "4225266001".  |
| "XT"    | Crystal stability E.g. "5ppm@25C;15ppm", which means a frequency stability of $\pm 5$ ppm at room temperature and a stability of $\pm 15$ ppm over the full temperature range and including aging. |

pVpdItem

String retrieved from the EEPROM. The character array must be allocated before calling  $\mathbf{v}_{\mathbf{p}\mathbf{d}\mathbf{R}\mathbf{e}\mathbf{a}\mathbf{d}}$ . The  $\mathbf{D}\mathbf{T}\mathbf{A}\mathbf{P}\mathbf{I}$  limits the maximum length of a VPD item to 63 characters, so a 64-char array suffices.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | VPD item has been read successfully                       |
| DTAPI_E_EEPROM_FORMAT | The data format in the serial EEPROM is not VPD compliant |
| DTAPI_E_EEPROM_READ   | A read operation from the serial EEPROM did not succeed   |
| DTAPI_E_KEYWORD       | The keyword is neither two characters, nor "VPDID"        |
| DTAPI_E_NOT_ATTACHED  | Device object is not attached to device hardware          |
| DTAPI_E_NOT_FOUND     | The VPD item could not be found                           |

### **Remarks**

If one of the standard keywords ("CL", "EC", ...) has been specified and the method returns <code>DTAPI\_E\_NOT\_FOUND</code>, the serial EEPROM has been tampered.

# **DtDevice::VpdWrite**

Write a Vital-Product Data (VPD) item to the VPD read/write section in the serial EEPROM on the device.

### **Function Arguments**

рТаа

Null-terminated character string identifying the VPD item to be written. The keyword must consist of two characters (the "VPDID" item cannot be written).

pVpdItem

String to be written to the EEPROM. The maximum size of a VPD item is 63 characters.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | VPD item has been written successfully   |
| DTAPI_E_EEPROM_FULL  | The serial EEPROM has not enough free space available for writing the new VPD item |
| DTAPI_E_EEPROM_READ  | A read operation from the serial EEPROM did not succeed                            |
| DTAPI_E_EEPROM_WRITE | The write operation to the serial EEPROM did not succeed for another reason        |
| DTAPI_E_KEYWORD      | The keyword does not consist of two characters                                     |
| DTAPI_E_NOT_ATTACHED | Device object is not attached to device hardware                                   |
| DTAPI_E_READ_ONLY    | An attempt was made to overwrite a read-only VPD item                              |
| DTAPI_E_TOO_LONG     | The length of the VPD item is too long (>63 characters)                            |

#### Remarks

If a VPD item with the specified keyword already exists, that item is overwritten, unless it is a read-only item. In the latter case, **DTAPI\_E\_READ\_ONLY** is returned.

For system-specific use, the VPD specification in the *PCI Local Bus Specification Rev 2.2* recommends keywords of the form "Yx", with the second character one of '0' ... '9', 'B' ... 'Z'. Keyword "YA" is defined as the *system-asset identifier* provided by the system owner. Keywords of the form "Vx" are reserved for use by DekTec.

The size of the VPD read/write segment is 256 bytes. Write operations to the serial EEPROM are relatively slow.

### **DtInpChannel**

# **DtInpChannel**

Class representing an input channel for receiving the following formats:

- MPEG-2 transport stream over ASI, SPI or IP;
- Serial Digital Interface (SDI);
- Demodulators (receivers).

#### class DtInpChannel;

Operations on input channels require exclusive access to the hardware. Just a single input channel object can attach to the hardware and that object gets exclusive access.

Demodulators are a special case, because some operations on demodulators do not require exclusive access. Therefore, for demodulators only, an input channel can attach to receiver hardware non-exclusively. In this mode, operations that require exclusive access like reading transport-stream data return an error. However, operations like tuning and getting measurements can be executed, possibly in parallel from multiple processes. This enables application scenarios in which one application tunes the receiver and receives transport stream data, while another application reads MER, constellation points and other measurement data.

# **DtInpChannel::AttachToPort**

Attach the input-channel object to a specific physical port. Attachment can be exclusive (default) or shared. Demodulators are the only type of input channels that support shared access for a subset of functions (tuning and measurement functions).

### **Function Arguments**

pDtDvc

Pointer to the device object that represents a DekTec device. The device object must have been attached to the device hardware.

Port

Physical port number. The channel object is attached to this port. The port number of the topmost port is 1, except on the DTA-160 or DTA-2160, on which the top-most Ethernet port is port #4.

Exclusive

If false, request shared access. If true, request exclusive access. This is the default. For demodulators, and for demodulators only, this argument may be set to false. This way, multiple input channel objects in multiple processes can access the receiver and demodulator-specific functions that access the receiver using I2C calls can be called simultaneously, e.g. GetConstellationPoints and Tune. Most generic input-channel functions still require exclusive access to access device registers and will return an error (DTAPI\_E\_EXCL\_ACCESS\_REQD) if the channel was attached non-exclusively.

ProbeOnly

Probe whether the channel is in use, but do not actually attach.

### Result

| DTAPI_RESULT                   | Meaning   |
|--------------------------------|---|
| DTAPI_OK                       | Channel object has been attached successfully to the port   |
| DTAPI_OK_FAILSAFE              | For devices with a failsafe relay only.  Attachment in failsafe mode was successfully completed. The application shall call <code>SetFailsafeAlive</code> on a regular basis to prevent the release of the failsafe relay. Failure to do so will physically connect this input port to the buddy output port. This is not an error code; It is intended to make the application aware of failsafe mode. |
| DTAPI_E_ATTACHED               | Channel object is already attached  |
| DTAPI_E_CONNECT_TO_SERV<br>ICE | The DTAPI service is not running  |
| DTAPI_E_DEV_DRIVER             | Unclassified failure in device driver   |

| DTAPI_E_DEVICE         | Pointer <i>pDtDvc</i> is not valid or the device object is not attached to a hardware device  |
|------------------------|---|
| DTAPI_E_EXCL_MANDATORY | Shared access (Exclusive=false) was requested, but this is not supported by the input channel. Only demodulators support shared access. |
| DTAPI_E_IN_USE         | Another channel object is already attached to this port   |
| DTAPI_E_NO_DT_INPUT    | Port is not an input  |
| DTAPI_E_NO_SUCH_PORT   | Invalid port number for this device   |
| DTAPI_E_OUT_OF_MEM     | TS-over-IP: Receive FIFO cannot be allocated  |

## **DtInpChannel::BlindScan**

DtInputChannel supports synchronous and asynchronous BlindScan.

The synchronous version scans the spectrum for valid transponders.

The asynchronous version scans the spectrum and returns the transponder information using a callback mechanism.

```
DTAPI RESULT DtInpChannel::BlindScan(
 [in] int64 EndFreqHz
                      // Optional parameter to select ending
                       // frequency
);
DTAPI RESULT DtInpChannel::BlindScan(
 [in] DtBsProgressFunc pCallback, // Progress callback function
 [in] void* pOpaque,
                         // Opaque pointer
 [in] const DtDemodPars& DemodPars, // Demod pars to use for scanning
 // Optional parameter to select ending
 [in] int64 EndFreqHz
                       // frequency
);
```

### **Function Arguments**

 $\it NumEntries$ 

Specifies the size of the caller-supplied array pResults in number of DtTransmitter entries.

NumEntriesResult

Output argument that receives the number of transponders found. The value can be greater than NumEntries (when BlindScan returns DTAPI E BUF TOO SMALL).

pResults

Pointer to a caller-supplied array of **DtTransmitter** entries to receive the transmitter descriptors.

FreqHzSteps

This optional argument specifies the step size of the blind scan in Hertz.

*StartFreqHz* 

This optional argument specifies the starting frequency of the blind scan in Hertz.

 ${\it EndFreqHz}$ 

This optional argument specifies the ending frequency of the blind scan in Hertz.

pCallback

A callback function with callback prototype **DtBsProgressFunc** that will be executed by the asynchronous blind scan.

p0paque

An optional pointer to a user object that is returned in the callback function.

DemodPars

The demodulator parameters to use for the asynchronous blind scan.

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The blind scan succeeded successfully  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | The blind scan is not supported by the attached hardware   |
| DTAPI_E_BUF_TOO_SMALL | The number of transponder-description entries in <code>pResults</code> is too small. The number of entries required is returned in <code>NumEntriesResult</code> .                                   |
| DTAPI_E_INVALID_FREQ  | The range of frequencies specified with <code>FreqHzSteps</code> , <code>StartFreqHz</code> and <code>EndFreqHz</code> is incompatible (too low or too high) with the tuner on the attached hardware |

#### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The synchronous **BlindScan** method is currently only supported by the DTA-2137.

The Blindscan method operates with the current LNB settings. In order to scan the frequency band for multiple local oscillator frequency's and/or polarization modes, the desired LNB setting needs to be applied prior to calling Blindscan.

Depending on the starting frequency, the ending frequency and the step size, the synchronous **BlindScan** will take a few minutes to complete. To reduce the amount of time that **BlindScan** needs to complete the scan, the step size can be increased or the frequency band could be narrowed. Alternative the asynchronous method can be used.

# **DtInpChannel::CancelBlindScan**

Cancels a running asynchronous blind scan.

```
DTAPI_RESULT DtInpChannel::CancelBlindScan();
```

## **Function Arguments**

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | An active blind scan is cancelled                     |
| DTAPI_E_IDLE         | No blind scan is currently active                     |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

# **DtInpChannel::CancelSpectrumScan**

Cancels a running asynchronous spectrum scan.

```
DTAPI_RESULT DtInpChannel::CancelSpectrumScan();
```

## **Function Arguments**

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | An active spectrum scan is cancelled                  |
| DTAPI_E_IDLE         | No spectrum scan is currently active                  |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

# **DtInpChannel::ClearFifo**

Clear contents of the receive FIFO and set receive control to **DTAPI\_RXCTRL\_IDLE**. Clear the over-flow flag (**DTAPI RX FIFO OVF**).

```
DTAPI_RESULT DtInpChannel::ClearFifo();
```

### **Function Arguments**

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Receive FIFO has been cleared                         |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The effects of ClearFifo are equivalent to Reset (DTAPI\_FIFO\_RESET).

Calling ClearFifo() will clear the receive-FIFO-overflow flag (DTAPI\_FIFO\_OVF) and set the receive-control state to DTAPI RXCTRL IDLE.

# **DtInpChannel::ClearFlags**

Clear latched status flag(s).

### **Function Arguments**

Latched

Latched status flag(s) to be cleared. Multiple flags can be cleared with one method call by ORing the bit positions to be cleared. The following flags are latched and can be cleared:

| Value               | Meaning      |
|---------------------|--------------|
| DTAPI_RX_FIFO_OVF   | See GetFlags |
| DTAPI_RX_SYNC_ERR   | " "          |
| DTAPI_RX_RATE_OVF   | " "          |
| DTAPI_RX_TARGET_ERR | " "          |

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Flag(s) have been cleared successfully                |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

Some status flags that are queried with GetFlags are not latched and therefore cannot be cleared.

The latched status flags are also automatically reset after attaching and after Reset.

# **DtInpChannel::Detach**

Detach input-channel object from hardware function and free associated resources.

## **Function Arguments**

DetachMode

Specifies how the channel object is detached from the hardware function.

If DetachMode is 0, the object is detached without further action. Other modes are defined below.

| Value | Meaning   |
|-------|---|
|       | Clear the contents of the receive FIFO and set receive control to DTAPI_RXCTRL_IDLE |

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Channel object has been detached successfully from the hardware function        |
| DTAPI_E_INVALID_FLAGS | An invalid detach flag was specified  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function, so it cannot be detached |

# **DtInpChannel::DetectIoStd**

For ASI/SDI or SPI input channels: Detect whether the input signal is ASI, SDI, SPI or SPISDI.

### **Function Arguments**

Value

Indicates whether a DVB-ASI, an SDI, a SPI or a SPISDI signal was received.

| Value                 | Meaning                                  |
|-----------------------|--|
| DTAPI_IOCONFIG_ASI    | A valid DVB-ASI signal is being received |
| DTAPI_IOCONFIG_SDI    | A valid SDI signal is being received     |
| DTAPI_IOCONFIG_SPI    | A valid SPI signal is being received     |
| DTAPI_IOCONFIG_SPISDI | A valid SPISDI signal is being received  |

SubValue

If an SDI signal was received, SubValue receives the specific SDI standard, for example DTAPI IOCONFIG 525159 94.

If an SPISDI signal was received, *SubValue* receives the specific SPISDI standard, for example **DTAPI\_IOCONFIG\_SPI525I59\_94**.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | The I/O standard was detected successfully            |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

This routine may take considerable time to complete the detection process.

# **DtInpChannel::GetConstellationPoints**

Get an array of constellation points.

### **Function Arguments**

NumPoints

Specifies the number of constellation points to be read. The caller-supplied *pPoints* array must be able to accommodate at least *NumPoints* entries. A typical number of constellation points to read are 32.

pPoints

Pointer to a caller-supplied array of **DtConstelPoint** entries to receive the constellation points. The table below indicates the valid ranges for the constellation point x- and y-axis per device.

| Device   | Valid Range for X, Y | #Bits |
|----------|----------------------|-------|
| DTU-234  | 0 255                | 8     |
| DTU-235  | -512 512             | 10    |
| DTU-236  | -1024 1024           | 11    |
| DTA-2135 | -512 512             | 10    |
| DTA-2136 | -16384 16384         | 15    |
| DTA-2137 | -16384 16384         | 15    |
| DTA-2139 | -16384 16384         | 15    |

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | A valid set of constellation points has been returned        |
| DTAPI_E_INVALID_BUF   | The pPoints pointer is invalid                               |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function        |
| DTAPI_E_NOT_SUPPORTED | This functionality is not supported by the hardware or DTAPI |

# **DtInpChannel::GetDemodControl**

Get modulation parameters as detected by the demodulator.

### **Function Arguments**

pDemodPars

Receives the demodulation parameters. The user must have allocated the DtDemodPars structure. See class DtDemodPars for possible demodulation parameters.

```
ModType, ParXtra0, ParXtra1, ParXtra2
```

Modulation parameters as detected by the demodulator. See the tables on the following pages for a detailed specification of each parameter, per DekTec board type and firmware version.

### **Detailed Parameter Descriptions**

| Page | Modulation Type |
|------|-----------------|
| 279  | Overview        |
| 280  | ATSC            |
| 281  | DVB-S           |
| 282  | DVB-S.2         |
| 284  | DVB-T           |
| 286  | QAM             |
|      |                 |

| Page | Modulation Type |
|------|-----------------|
|      |                 |
|      |                 |
|      |                 |
|      |                 |
|      |                 |
|      |                 |
|      |                 |

## **Modulation Types**

ModType

Detected modulation type. The value **DTAPI\_MOD\_TYPE\_UNK** indicates that the modulation type could not be detected.

### L-Band

| ModType                | Meaning          | Required Capability                     |
|------------------------|------------------|---|
| DTAPI_MOD_DVBS_QPSK    | DVB-S, QPSK      | DTAPI_CAP_RX_DVBS                       |
| DTAPI_MOD_DVBS2_8PSK   | DVB-S.2, 8-PSK   | DTAPI_CAP_RX_DVBS                       |
| DTAPI_MOD_DVBS2_16APSK | DVB-S.2, 16-APSK | DTAPI_CAP_RX_DVBS +<br>DTAPI_CAP_S2APSK |
| DTAPI_MOD_DVBS2_32APSK | DVB-S.2, 32-APSK | DTAPI_CAP_RX_DVBS + DTAPI_CAP_S2APSK    |
| DTAPI_MOD_DVBS2_QPSK   | DVB-S.2, QPSK    | DTAPI_CAP_RX_DVBS                       |

## VHF / UHF

| ModType          | Meaning  | Required Capability  |
|------------------|----------|--|
| DTAPI_MOD_ATSC   | ATSC VSB | DTAPI_CAP_RX_ATSC  |
| DTAPI_MOD_DVBT   | DVB-T    | DTAPI_CAP_RX_DVBT  |
| DTAPI_MOD_QAM16  | 16-QAM   | DTAPI_CAP_RX_QAM_A for QAM-A                                 |
| DTAPI_MOD_QAM32  | 32-QAM   | DTAPI_CAP_RX_QAM_B for QAM-B<br>DTAPI_CAP_RX_QAM_C for QAM-C |
| DTAPI_MOD_QAM64  | 64-QAM   | <b></b>  |
| DTAPI_MOD_QAM128 | 128-QAM  |  |
| DTAPI_MOD_QAM256 | 256-QAM  |  |

### **Modulation Mode: ATSC**

 ${\it ModType}$ 

| ModType        | Meaning | Required Capability |
|----------------|---------|---------------------|
| DTAPI_MOD_ATSC | ATSC    | DTAPI_CAP_RX_ATSC   |

### ParXtra0

Extra modulation parameter #0 specifies the VSB constellation.

| ParXtra0               | Meaning                               | Symbol Rate (bd) | TS Rate (bps) |
|------------------------|---------------------------------------|------------------|---------------|
| DTAPI_MOD_ATSC_VSB8    | 8-VSB                                 | 10,762,238       | 19,392,658    |
| DTAPI_MOD_ATSC_VSB16   | 16-VSB                                | 10,762,238       | 38,785,317    |
| DTAPI_MOD_ATSC_VSB_UNK | Constellation is unknown              |                  |               |
| DTAPI_MOD_ATSC_VSB_MSK | AND-mask for ATSC constellation field |                  |               |

ParXtra1, ParXtra2

Not used in ATSC modulation.

### **Modulation Mode: DVB-S**

ParXtra0

Extra modulation parameter #0

| ParXtra0         | Meaning              |
|------------------|----------------------|
| DTAPI_MOD_1_2    | Code rate 1/2        |
| DTAPI_MOD_2_3    | Code rate 2/3        |
| DTAPI_MOD_3_4    | Code rate 3/4        |
| DTAPI_MOD_4_5    | Code rate 4/5        |
| DTAPI_MOD_5_6    | Code rate 5/6        |
| DTAPI_MOD_6_7    | Code rate 6/7        |
| DTAPI_MOD_7_8    | Code rate 7/8        |
| DTAPI_MOD_CR_UNK | Code rate is unknown |

### ParXtra1

Extra modulation parameter #1 encodes spectral inversion yes/no

### **Spectral Inversion**

| ParXtra1                   | Meaning                              |
|----------------------------|--------------------------------------|
| DTAPI_MOD_S_S2_SPECNONINV  | No spectrum inversion detected       |
| DTAPI_MOD_S_S2_SPECINV     | Spectrum inversion detected          |
| DTAPI_MOD_S_S2_SPECINV_UNK | Spectrum inversion status is unknown |
| DTAPI_MOD_S_S2_SPECINV_MSK | AND-mask for this field              |

### ParXtra2

The detected symbol rate (in bd). The value **DTAPI\_MOD\_SYMRATE\_UNK** indicates the symbol rate could not be detected.

### **Modulation Mode: DVB-S.2**

ParXtra0

Extra modulation parameter #0 encodes the code rate.

| ParXtra0         | Meaning              |
|------------------|----------------------|
| DTAPI_MOD_1_2    | Code rate 1/2        |
| DTAPI_MOD_1_3    | Code rate 1/3        |
| DTAPI_MOD_1_4    | Code rate 1/4        |
| DTAPI_MOD_2_3    | Code rate 2/3        |
| DTAPI_MOD_2_5    | Code rate 2/5        |
| DTAPI_MOD_3_4    | Code rate 3/4        |
| DTAPI_MOD_3_5    | Code rate 3/5        |
| DTAPI_MOD_4_5    | Code rate 4/5        |
| DTAPI_MOD_5_6    | Code rate 5/6        |
| DTAPI_MOD_6_7    | Code rate 6/7        |
| DTAPI_MOD_7_8    | Code rate 7/8        |
| DTAPI_MOD_8_9    | Code rate 8/9        |
| DTAPI_MOD_9_10   | Code rate 9/10       |
| DTAPI_MOD_CR_UNK | Code rate is unknown |

### ParXtra1

Extra modulation parameter #1 encodes spectral inversion yes/no, pilots yes/no and long/short FEC frame.

### **Spectral Inversion**

See Spectral Inversion section for DVB-S

### **Pilots**

| Value                   | Meaning                  |
|-------------------------|--------------------------|
| DTAPI_MOD_S2_NOPILOTS   | Pilots disabled          |
| DTAPI_MOD_S2_PILOTS     | Pilots enabled           |
| DTAPI_MOD_S2_PILOTS_UNK | Pilots status is unknown |
| DTAPI_MOD_S2_PILOTS_MSK | AND-mask for this field  |

### Long or Short FECFRAME

| Value                 | Meaning                      |
|-----------------------|------------------------------|
| DTAPI_MOD_S2_SHORTFRM | Short FECFRAME (16.200 bits) |
| DTAPI_MOD_S2_LONGFRM  | Long FECFRAME (64.800 bits)  |

| DTAPI_MOD_S2_FRM_UNK | Frame size is unknown   |
|----------------------|-------------------------|
| DTAPI_MOD_S2_FRM_MSK | AND-mask for this field |

### ParXtra2

The detected symbol rate in baud. The value <code>dtapi\_mod\_symrate\_unk</code> indicates the symbol rate could not be detected.

### **Modulation Mode: DVB-T**

ParXtra0

Extra modulation parameter #0 is the code rate.

| Value            | Meaning              |
|------------------|----------------------|
| DTAPI_MOD_1_2    | Code rate 1/2        |
| DTAPI_MOD_2_3    | Code rate 2/3        |
| DTAPI_MOD_3_4    | Code rate 3/4        |
| DTAPI_MOD_5_6    | Code rate 5/6        |
| DTAPI_MOD_7_8    | Code rate 7/8        |
| DTAPI_MOD_CR_UNK | Code rate is unknown |

### ParXtra1

Extra modulation parameter #1 is the OR of values for the following fields: Bandwidth, Constellation, Guard Interval, Interleaving and Transmission Mode.

### Bandwidth

| Value                 | Meaning              |
|-----------------------|----------------------|
| DTAPI_MOD_DVBT_6MHZ   | 6 MHz                |
| DTAPI_MOD_DVBT_7MHZ   | 7 MHz                |
| DTAPI_MOD_DVBT_8MHZ   | 8 MHz                |
| DTAPI_MOD_DVBT_BW_UNK | Bandwidth is unknown |
| DTAPI_MOD_DVBT_BW_MSK | AND mask             |

### Constellation

| Value                 | Meaning                  |
|-----------------------|--------------------------|
| DTAPI_MOD_DVBT_QPSK   | QPSK                     |
| DTAPI_MOD_DVBT_QAM16  | 16-QAM                   |
| DTAPI_MOD_DVBT_QAM64  | 64-QAM                   |
| DTAPI_MOD_DVBT_CO_UNK | Constellation is unknown |
| DTAPI_MOD_DVBT_CO_MSK | AND mask                 |

### **Guard Interval**

| Value                 | Meaning |
|-----------------------|---------|
| DTAPI_MOD_DVBT_G_1_32 | 1/32    |
| DTAPI_MOD_DVBT_G_1_16 | 1/16    |
| DTAPI_MOD_DVBT_G_1_8  | 1/8     |
| DTAPI_MOD_DVBT_G_1_4  | 1/4     |

| DTAPI_MOD_DVBT_CO_UNK | Guard interval is unknown |
|-----------------------|---------------------------|
| DTAPI_MOD_DVBT_GU_MSK | AND mask                  |

## Interleaving

| Value                  | Meaning                       |
|------------------------|-------------------------------|
| DTAPI_MOD_DVBT_INDEPTH | In-depth interleaver (2k, 4k) |
| DTAPI_MOD_DVBT_NATIVE  | Native interleaver            |
| DTAPI_MOD_DVBT_IL_UNK  | Interleaving is unknown       |
| DTAPI_MOD_DVBT_IL_MSK  | AND mask                      |

## Transmission Mode

| Value                 | Meaning                      |  |
|-----------------------|------------------------------|--|
| DTAPI_MOD_DVBT_2K     | 2k mode                      |  |
| DTAPI_MOD_DVBT_8K     | 8k mode                      |  |
| DTAPI_MOD_DVBT_MD_UNK | Transmission mode is unknown |  |
| DTAPI_MOD_DVBT_MD_MSK | AND mask                     |  |

ParXtra2

Not used for DVB-T

### **Modulation Mode: QAM**

 ${\it ModType}$ 

The QAM constellation is encoded in ModType according to the following table.

| ModType          | Meaning | Required Capability                                      |
|------------------|---------|--|
| DTAPI_MOD_QAM16  | 16-QAM  | DTAPI_CAP_RX_QAM_A (QAM-A)                               |
| DTAPI_MOD_QAM32  | 32-QAM  | dtapi_cap_rx_qam_b (QAM-B)<br>dtapi_cap_rx_qam_c (QAM-C) |
| DTAPI_MOD_QAM64  | 64-QAM  |  |
| DTAPI_MOD_QAM128 | 128-QAM |  |
| DTAPI_MOD_QAM256 | 256-QAM |  |

ParXtra0

Extra modulation parameter #0 is the ITU-T J.83 Annex.

| ITU-T J.83 Annex  | Meaning                          | Required Capability |
|-------------------|----------------------------------|---------------------|
| DTAPI_MOD_J83_A   | J.83 annex A (DVB-C)             | DTAPI_CAP_RX_QAM_A  |
| DTAPI_MOD_J83_B   | J.83 annex B<br>("American QAM") | DTAPI_CAP_RX_QAM_B  |
| DTAPI_MOD_J83_C   | J.83 annex C<br>("Japanese QAM") | DTAPI_CAP_RX_QAM_C  |
| DTAPI_MOD_J83_UNK | Annex is unknown                 |                     |

### ParXtra1

For J.83 Annex B, this parameter specifies the interleaving mode detected as specified in the table below. For Annex A and C this parameter is not used.

| Value                   | CW   | I   | J  | Burst protection 64-/256-QAM |
|-------------------------|------|-----|----|------------------------------|
| DTAPI_MOD_QAMB_I128_J1D | 0001 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_164_J2   | 0011 | 64  | 2  | 47 μs / 33 μs                |
| DTAPI_MOD_QAMB_I32_J4   | 0101 | 32  | 4  | 24 μs / 16 μs                |
| DTAPI_MOD_QAMB_I16_J8   | 0111 | 16  | 8  | 12 μs / 8.2 μs               |
| DTAPI_MOD_QAMB_I8_J16   | 1001 | 8   | 16 | 5.9 μs / 4.1 μs              |
| DTAPI_MOD_QAMB_I128_J1  | 0000 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_I128_J2  | 0010 | 128 | 2  | 190 μs / 132 μs              |
| DTAPI_MOD_QAMB_I128_J3  | 0100 | 128 | 3  | 285 μs / 198 μs              |
| DTAPI_MOD_QAMB_I128_J4  | 0110 | 128 | 4  | 379 μs / 264 μs              |
| DTAPI_MOD_QAMB_I128_J5  | 1000 | 128 | 5  | 474 μs / 330 μs              |
| DTAPI_MOD_QAMB_I128_J6  | 1010 | 128 | 6  | 569 μs / 396 μs              |
| DTAPI_MOD_QAMB_I128_J7  | 1100 | 128 | 7  | 664 μs / 462 μs              |
| DTAPI_MOD_QAMB_I128_J8  | 1110 | 128 | 8  | 759 μs / 528 μs              |

| DTAPI_MOD_QAMB_IL_UNK | - | - | - | Interleaving mode is unknown |
|-----------------------|---|---|---|------------------------------|
|-----------------------|---|---|---|------------------------------|

ParXtra2

The detected symbol rate (in bd). The value <code>DTAPI\_MOD\_SYMRATE\_UNK</code> indicates the symbol rate could not be detected.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The modulation parameters have been returned successfully  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                      |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED | This function is not supported for the underlying hardware |

### **Remarks**

The detected modulation parameters returned by this method should only be considered to be valid if the DtInpChannel indicates that receiver- and FEC-lock has been achieved.

# **DtInpChannel::GetDescriptor**

Get hardware function descriptor for this input channel.

```
DTAPI_RESULT DtInpChannel::GetDescriptor(
  [out] DtHwFuncDesc& HwFuncDesc // Hardware function descriptor
);
```

## **Function Arguments**

*HwFuncDesc* 

Output argument that receives the hardware function descriptor.

### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | The hardware function descriptor been retrieved successfully |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function        |

# **DtInpChannel::GetFifoLoad**

Get the current load of the channel's receive FIFO.

# **Function Arguments**

FifoLoad

This output argument is set to the number of bytes in the receive FIFO.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | FIFO load has been retrieved successfully             |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The value retrieved with this method call approximates the load of the Receive FIFO. Some additional data bytes may be buffered on the device.

If a transfer is in progress and/or the device receives data, then every call to **GetFifoLoad** may return a different value.

# **DtInpChannel::GetFlags**

Get current and latched value of the input channel's status flags.

# **Function Arguments**

Flags

Output argument that is set to the current value of the input-channel status flags. Each status flag is represented by one bit. Multiple status flags can be true simultaneously. If none of the status flags is true, Flags is set to zero.

| Value               | Meaning  |
|---------------------|--|
| DTAPI_RX_FIFO_OVF   | A receive FIFO overflow condition has occurred. The data in the receive FIFO was not read fast enough to a system buffer.                        |
| DTAPI_RX_SYNC_ERR   | A synchronisation error has occurred in the synchronisation stage of the input channel. This error cannot occur in packet mode DTAPI_RXMODE_RAW. |
| DTAPI_RX_RATE_OVF   | Data is entering the receive FIFO faster than 150Mbps (DTA-122 only)   |
| DTAPI_RX_TARGET_ERR | The target adapter signals a fault (DTA-122 only)  |
| DTAPI_RX_LINK_ERR   | The communication link with the device is broken (DTE-31xx devices only)   |
| DTAPI_RX_DATA_ERR   | Data is lost during transfer to a system buffer (DTE-31xx devices only)  |

#### Latched

Output argument that is set to the latched value of the status flags: On a '0' to '1' transition of a status flag, the corresponding bit in *Latched* is set to '1'. The bit remains set until cleared explicitly by one of the following DTAPI-calls: ClearFlags, AttachToPort or Reset.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Status flags have been retrieved successfully         |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### Remarks

# **DtInpChannel::GetIoConfig**

Get the I/O configuration of the physical port attached to the input channel. This is the same function as DtDevice::GetIoConfig applied to the physical port corresponding to this channel.

# **Function Arguments**

```
Group, Value, SubValue, ParXtra0, ParXtra1

I/O configuration parameters, see DtDevice::GetIoConfig.
```

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | I/O configuration has been retrieved successfully     |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |
| Other result codes   | See DtDevice::GetIoConfig                             |

#### Remarks

# **DtInpChannel::GetIpPars**

Get TS-over-IP parameters of the received stream as detected by the driver.

# **Function Arguments**

pIpPars

Receives the TS-over-IP parameters. The user must have allocated the DtIpPars structure.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The TS-over-IP parameters have been retrieved successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED | Channel is not a TS-over-IP channel                        |

### **Remarks**

# **DtInpChannel::GetIpStat**

Get IP statistics from the network driver.

# **Function Arguments**

pIpStat

Receives the IP statistics. The user must have allocated the DtIpStat structure.

# Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The TS-over-IP statistics have been retrieved successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED | Channel is not a TS-over-IP channel                        |

### **Remarks**

# **DtInpChannel::GetMaxFifoSize**

Get the maximum size of the channel's receive FIFO.

# **Function Arguments**

*MaxFifoSize* 

Maximum size of the receive FIFO in number of bytes.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Maximum size of FIFO has been read successfully       |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

# **Remarks**

# **DtInpChannel::GetPars**

Get parameter settings from the demodulator. This function accepts and returns an array of DtPar structures so that multiple parameters can be retrieved in one call.

# **Function Arguments**

NumPars

Specifies the size, in number of DtPar entries, of the caller-supplied pPars array.

pPar

Pointer to a caller-supplied array of DtPar structures specifying the requested parameters. The current values of the requested parameters are returned through this same array.

### Result

| DTAPI_RESULT         | Meaning                                      |
|----------------------|--|
| DTAPI_OK             | Parameter values have been read successfully |
| DTAPI_E_INVALID_BUF  | Invalid buffer pointer is passed             |
| DTAPI_E_INVALID_TYPE | Parameter type is incorrect                  |
| DTAPI_E_NOT_ATTACHED | demodulator is not attached                  |

### **Remarks**

# DtInpChannel::GetRxClkFreq

DTA-2142 only. Get the frequency of the DVB-SPI clock.

# **Function Arguments**

*MaxFifoSize* 

Output argument that is set to a measurement of the DVB-SPI clock frequency.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Maximum size of FIFO has been read successfully       |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

# **DtInpChannel::GetRxControl**

Get the current value of receive control.

### **Function Arguments**

**RxControl** 

This argument is set to the current value of receive control: **DTAPI\_RXCTRL\_IDLE** or **DTAPI\_RXCTRL\_RCV**.

Refer to SetRxControl for a description of the receive control values.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Receive control has been successfully retrieved       |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

Transport Streams — In receive modes DTAPI\_RXMODE\_ST188, DTAPI\_RXMODE\_STMP2 and DTAPI\_RXMODE\_ST204, receive control is synchronised to packet boundaries. For example, if SetRxControl is used to change the control state from DTAPI\_RXCTRL\_RCV to DTAPI\_RXCTRL\_IDLE, and GetRxControl is called immediately thereafter, then DTAPI\_RXCTRL\_RCV may be returned. Only when a new packet enters the Receive FIFO, the value returned by GetRxControl becomes DTAPI\_RXCTRL\_IDLE.

SDI – Receive-control state is synchronised to the vertical sync.

In receive mode **DTAPI\_RXMODE\_STRAW**, method **GetRxControl** always returns the receive-control state set by **SetRxControl**.

# DtInpChannel::GetRxMode

Get the current value of receive mode.

# **Function Arguments**

RxControl

This argument is set to the current value of receive mode. Refer to **SetRxMode** for a description of the receive modes.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Receive mode has been successfully retrieved          |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

# **Remarks**

# **DtInpChannel::GetStatistics**

Get statistics information from demodulator. This function gets an array of **DtStatistic** structures so that multiple statistics can be retrieved in one call.

# **Function Arguments**

Count

The number of requested statistics.

pStatistic

An array specifying the statistics to be retrieved in one call. After the call it holds the values of the requested statistics.

### Result

| DTAPI_RESULT            | Meaning  |
|-------------------------|--|
| DTAPI_OK                | The statistics have been read successfully   |
| DTAPI_E_DEV_DRIVER      | Unclassified failure in device driver  |
| DTAPI_E_INVALID_MODE    | The statistic is not compatible with ErrorStatsMode  |
| DTAPI_E_INVALID_FOR_ACM | The requested statistic is not available for Adaptive Coding<br>Modulation (ACM) in DVB-S2             |
| DTAPI_E_NOT_ATTACHED    | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_LOCKED      | The requested statistic cannot be retrieved because the receiver is not locked to the input signal     |
| DTAPI_E_NOT_SUPPORTED   | The requested statistic is not supported by the hardware or the requested return type is not supported |
| DTAPI_E_TUNING          | The statistic cannot be retrieved because the receiver is busy with tuning.                            |

### **Remarks**

# **DtInpChannel::GetStatus**

Get status information from the input channel. If a device does not support a certain feature, the corresponding status variable is set to **DTAPI\_NOT\_SUPPORTED** (-1).

### **Function Arguments**

PacketSize

MPEG mode: Size of incoming MPEG-2 transport packets.

| Value             | Meaning   |
|-------------------|---|
| DTAPI_PCKSIZE_188 | 188-byte packets at the transport-stream input                  |
| DTAPI_PCKSIZE_204 | 204-byte packets at the transport-stream input                  |
| DTAPI_PCKSIZE_INV | No MPEG-2 compliant packets found at the transport-stream input |

SDI mode: SDI video standard of incoming stream. For cards with **DTAPI\_CAP\_MATRIX** one of **DTAPI VIDSTD XXX**. For cards without that capability one of the following values:

| Value             | Meaning                                   |
|-------------------|---|
| DTAPI_SDIMODE_525 | 525-line video mode input                 |
| DTAPI_SDIMODE_625 | 625-line video mode input                 |
| DTAPI_SDIMODE_INV | No valid SDI signal detected on the input |

NumInv

Defined for DVB-SPI input channels (DTA-122) only: Number of "invalid" bytes (DVALID input signal is '0') per packet.

| Value               | Meaning  |
|---------------------|--|
| DTAPI_NUMINV_NONE   | No invalid bytes                                     |
| DTAPI_NUMINV_16     | 16 invalid bytes per packet                          |
| DTAPI_NUMINV_OTHER  | Other number of invalid bytes per packet             |
| DTAPI_NOT_SUPPORTED | Device does not support this parameter (not DTA-122) |

ClkDet

For DVB-SPI input channels, this output argument indicates whether a receive clock of sufficient frequency is detected at the SPI input.

For DVB-ASI and SDI input channels, this output argument acts as a Carrier Detect signal.

| Value             | Meaning  |
|-------------------|--|
| DTAPI_CLKDET_OK   | DVB-SPI : Receive clock detected DVB-ASI, SDI : Carrier detected TS-over-IP : IP traffic detected in the last second                                   |
| DTAPI_CLKDET_FAIL | DVB-SPI : No receive clock detected, or receive-clock rate is too low DVB-ASI, SDI : No carrier detected TS-over-IP : No IP traffic in the last second |

#### AsiLock

For DVB-ASI input channels, this output argument indicates whether the DVB-ASI clock signal can be recovered reliably.

| Value               | Meaning  |
|---------------------|--|
| DTAPI_ASI_INLOCK    | PLL is locked to the incoming DVB-ASI input signal     |
| DTAPI_ASI_NOLOCK    | Clock signal cannot be recovered from the input signal |
| DTAPI_NOT_SUPPORTED | Hardware function does not support this parameter      |

For ports configured as SDI genlock input port, this output argument indicates whether the genlock circuitry is locked to the provided SDI genlock signal.

| Value                | Meaning  |
|----------------------|--|
| DTAPI_GENLOCK_INLOCK | The SDI genlock circuitry is locked to the incoming SDI input signal     |
| DTAPI_GENLOCK_NOLOCK | The SDI genlock circuitry is NOT locked to the incoming SDI input signal |
| DTAPI_NOT_SUPPORTED  | Hardware function does not support this parameter                        |

#### RateOk

Defined for DVB-ASI input channels only: Output argument that indicates whether the transport rate at the DVB-ASI input is sufficiently high for further processing. When this parameter is set to <code>DTAPI\_INPRATE\_Low</code>, the most likely cause is an "empty" DVB-ASI signal (stuffing symbols only).

| Value               | Meaning   |
|---------------------|---|
| DTAPI_INPRATE_OK    | The DVB-ASI input rate is sufficient              |
| DTAPI_INPRATE_LOW   | The DVB-ASI input rate is too low (<900 bps)      |
| DTAPI_NOT_SUPPORTED | Hardware function does not support this parameter |

### AsiInv

Defined for DVB-ASI input channels only: This argument indicates whether the input circuitry is currently inverting the DVB-ASI input signal. This is most useful when polarity control has been set to **DTAPI\_POLARITY\_AUTO**; In the other polarity-control settings, <code>AsiInv</code> just echoes the value of argument <code>PolarityControl</code> in the call to <code>PolarityControl</code>.

| Value               | Meaning   |
|---------------------|---|
| DTAPI_ASIINV_NORMAL | Polarity of DVB-ASI input signal is normal (not inverted) |
| DTAPI_ASIINV_INVERT | Polarity of DVB-ASI signal is inverted                    |
| DTAPI_NOT_SUPPORTED | Device does not support this parameter                    |

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Status information has been read successfully         |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

# **Remarks**

# **DtInpChannel::GetStreamSelection**

Get the selection parameters for the currently selected DAB-stream, PLP, Layer or T2-MI stream.

# **Function Arguments**

StreamSel

Output argument that receives the selection parameters.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The selection parameters have been retrieved successfully                                 |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver   |
| DTAPI_E_INVALID_MODE  | The current demodulation type does not correspond to the type of the selection parameters |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                                     |
| DTAPI_E_NOT_SUPPORTED | The device does not support DAB, DVB-C2, DVB-T2, T2-MI or ISDB-T                          |

#### **Remarks**

# **DtInpChannel::GetSupportedPars**

Get the parameters supported by the demodulator.

# **Function Arguments**

NumPars

As an input argument it specifies the size, in number of  $\mathtt{DtPar}$  entries, of the caller-supplied  $\mathtt{pPars}$  array. As an output argument it receives the number of supported parameters.

pPar

Pointer to a caller-supplied array of DtPar to receive the requested parameters.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Parameter information has been read successfully  |
| DTAPI_E_BUF_TOO_SMALL | The number of DtPar entries in pPars is too small |
| DTAPI_E_NOT_ATTACHED  | Advanced demodulator object is not attached       |

# **DtInpChannel::GetSupportedStatistics**

Get the supported statistics from demodulator. This function gets an array of **DtStatistic** structures.

# **Function Arguments**

Count

As input it specifies the size, in number of **DtStatistic** entries, of the caller-supplied *pStatistics* array. As output it receives the number of supported statistics and described in *pStatistics*.

pStatistic

Pointer to a caller-supplied array of DtStatistic entries identifying the supported statistics.

### Result

| DTAPI_RESULT                 | Meaning  |
|------------------------------|--|
| DTAPI_OK                     | Statistics information has been read successfully              |
| DTAPI_E_DEV_DRIVER           | Unclassified failure in device driver                          |
| DTAPI_E_NOT_ATTACHED         | Channel object is not attached to a hardware function          |
| DTAPI_E_BUFFER_TOO_<br>SMALL | The number of statistic entries in $pStatistics$ is too small. |

### **Remarks**

# DtInpChannel::GetTargetId

Get the target-adapter identifier (DTA-122 only).

# **Function Arguments**

Present

Output argument that indicates whether a target adapter has been detected.

| Value                | Meaning  |
|----------------------|--|
| DTAPI_NO_CONNECTION  | Nothing is connected to the input connector of the DTA-122.        |
| DTAPI_DVB_SPI_SOURCE | A standard DVB-SPI source is connected to the DTA-122.             |
| DTAPI_TARGET_PRESENT | A target adapter is present.                                       |
| DTAPI_TARGET_UNKNOWN | The device is busy assessing the situation on the input connector. |

*TargetId* 

Output argument that is set to an integer value that uniquely identifies the target adapter. Please refer to the DTA-122 documentation for a list of available target adapters.

TargetId is assigned a value only if Present is DTAPI TARGET PRESENT.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Target ID has been retrieved successfully.   |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver.   |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function.   |
| DTAPI_E_NOT_SUPPORTED | The input channel does not support target adapters (DVB-ASI input channels: DTA-120/140, DTU-225). |

### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The DTA-122 does not recognize the DTA-102 as a standard DVB-SPI source (*Present* is set to **DTAPI\_NO\_CONNECTION**), unless the ground pins on the DVB-SPI cable are connected together. This is due to the target-adapter detection circuitry.

# DtInpChannel::GetTsRateBps

Get a measurement of the input's transport stream rate.

### **Function Arguments**

**TsRate** 

Measurement of the current transport stream rate, expressed in bits per second. This rate does not take into account 'extra' bytes beyond the 188 MPEG-2 defined bytes.

If the channel's receive mode is **DTAPI\_RXMODE\_STRAW**, the value returned by this method is equal to the raw input bit rate, this is the rate at which valid data enters the device.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | transport-stream rate has been read successfully      |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

In all receive modes except **DTAPI\_RXMODE\_STRAW** this method strictly applies the definition of transport-stream rate in the MPEG-2 Systems specification. This rate is based on 188-byte packets. If the packet size is not 188 bytes, a conversion factor is used.

Example: When 204-byte packets enter the system, the raw input rate is divided by 204/188.

# **DtInpChannel::GetTunerFrequency**

Get current tuner frequency.

# **Function Arguments**

FreqHz

Current tuning frequency (in Hz)

# Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The tuner frequency has been retrieved successfully   |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | The device does not include a tuner                   |

# **Remarks**

# **DtInpChannel::GetViolCount**

Get number of code violations on a DVB-ASI input channel.

# **Function Arguments**

ViolCount

Total number of DVB-ASI code violations since power-up of a DVB-ASI input channel.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Code violation count has been read successfully       |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

A code violation is a bit error that leads to an illegal 8B/10B code (the line code used by DVB-ASI). Bit errors may be caused by poor cable quality, or by an input cable that is too long.

The value of this counter is updated about 20 times per second. The counter is only incremented and never reset. When the largest positive 32-bit integer value  $(2^{31-1})$  has been reached, the counter wraps around to the largest 32-bit negative integer value  $(-2^{31})$ .

Connecting or disconnecting the cable to/from a DVB-ASI input channel may cause a massive amount of code violations. This is "normal" behaviour, caused by the locking process of the DVB-ASI input circuitry.

# **DtInpChannel::12CLock**

Lock the I2C bus for exclusive access.

# **Function Arguments**

Timeout

Maximum time (in ms) to wait for the I2C lock. The value -1 indicates an infinite wait time.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | I2C lock has successfully been obtained                 |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                   |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to device hardware       |
| DTAPI_E_NOT_SUPPORTED | Locking of the I2C bus is not supported on this device  |
| DTAPI_E_TIMEOUT       | Lock could not be obtained within the specified timeout |

#### Remarks

It is recommended to never hold the lock for longer than 2 seconds as locking the I2C bus for prolonged periods of time can result in serious degradation of the performance of the device and can even result in loss of functionality.

# **DtInpChannel::12CRead**

Read data from the I2C bus.

# **Function Arguments**

DvcAddr

Device address of the targeted I2C device.

The I2C device address consists out of 1 transfer direction bit + 7 address bits. This method ignores the transfer bit (LSB) and only used the 7 address bits. Valid values for the device address are: 0x00h-0xFF

pBuffer

Pointer to a buffer for receiving the I2C bytes.

The buffer must be caller-allocated and have a size of at least NumBytesToRead.

NumBytesToRead

Number of bytes to read.

Maximum allowed number of bytes to read is 512.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Sample has been retrieved successfully                      |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                       |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to device hardware           |
| DTAPI_E_INVALID_BUF   | Invalid buffer pointer provided                             |
| DTAPI_E_INVALID_SIZE  | Invalid number of bytes to read specified (i.e. >512 bytes) |
| DTAPI_E_NOT_SUPPORTED | The device does not support reading of the on board I2C bus |

### **Remarks**

The I2CRead method is intended for direct low-level access to the on board I2C resources.

# **DtInpChannel::12CUnlock**

Release the lock (i.e. exclusive access) on the I2C bus.

```
DTAPI_RESULT DtInpChannel::I2CUnlock(void);
```

# Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | I2C lock has successfully been released                  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                    |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to device hardware        |
| DTAPI_E_NOT_SUPPORTED | Unlocking of the I2C bus is not supported on this device |

# Remarks

# **DtInpChannel::12CWrite**

Write data to the I2C bus.

# **Function Arguments**

DvcAddr

Device address of the targeted I2C device

The I2C device address consists out of 1 transfer direction bit + 7 address bits. This method ignores the transfer bit (LSB) and only used the 7 address bits. Valid values for the device address are: 0x00h-0xFF

pBuffer

Pointer to a buffer with the bytes to write.

The buffer must have a size of at least NumBytesToWrite.

*NumBytesToWrite* 

Number of bytes to write.

Maximum allowed number of bytes to write is 512.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Sample has been retrieved successfully.                      |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver.                       |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to device hardware.           |
| DTAPI_E_INVALID_BUF   | Invalid buffer pointer provided                              |
| DTAPI_E_INVALID_SIZE  | Invalid number of bytes to write specified (i.e. >512 bytes) |
| DTAPI_E_NOT_SUPPORTED | The device does not support writing to the on board I2C bus. |

### **Remarks**

The I2CWrite method is intended for direct low-level access to the on board I2C resources.

# DtInpChannel::12CWriteRead

Lock the I2C bus followed by a write and/or read action on the I2C bus and finally release the lock.

# **Function Arguments**

**DvcAddrWrite** 

Device address of the targeted I2C device to write to.

The I2C device address consists out of 1 transfer direction bit + 7 address bits. This method ignores the transfer bit (LSB) and only used the 7 address bits. Valid values for the device address are: 0x00h-0xFF

pBufferWrite

Pointer to a buffer with the bytes to write.

The buffer must have a size of at least NumBytesToWrite.

NumBytesToWrite

Number of bytes to write.

Maximum allowed number of bytes to write is 512.

DvcAddrRead

Device address of the targeted I2C device to read from.

The I2C device address consists out of 1 transfer direction bit + 7 address bits. This method ignores the transfer bit (LSB) and only used the 7 address bits. Valid values for the device address are: 0x00h-0xFF

pBufferRead

Pointer to a buffer for receiving the I2C bytes.

The buffer must be caller-allocated and have a size of at least NumBytesToRead.

NumBytesToRead

Number of bytes to read.

Maximum allowed number of bytes to read is 512.

# Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Sample has been retrieved successfully.                      |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver.                       |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to device hardware.           |
| DTAPI_E_INVALID_BUF   | Invalid buffer pointer provided                              |
| DTAPI_E_INVALID_SIZE  | Invalid number of bytes to write specified (i.e. >512 bytes) |
| DTAPI_E_NOT_SUPPORTED | The device does not support writing to the on board I2C bus. |

# **Remarks**

The I2CWriteRead method is intended for direct low-level access to the on board I2C resources. Internal use only: this function is exported for DekTec application usage.

# **DtInpChannel::LedControl**

Take direct control of input-status LED, or let hardware drive the LED.

# **Function Arguments**

LedControl

Controls the LED.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_LED_HARDWARE | Hardware drives the LED (default after power-up) |
| DTAPI_LED_OFF      | LED is forced to off-state                       |
| DTAPI_LED_GREEN    | LED is forced to green-state                     |
| DTAPI_LED_RED      | LED is forced to red-state                       |
| DTAPI_LED_YELLOW   | LED is forced to yellow-state                    |

# Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | LED setting has been accepted                         |
| DTAPI_E_INVALID_MODE | The specified LED-control value is invalid            |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

Detaching the input channel releases any direct-control setting that might have been applied to the LEDs (LED control is reset to **DTAPI LED HARDWARE**).

Some devices have a single LED, which can be controlled by either DtDevice::LedControl or by DtInpChannel::LedControl. If both methods are used at the same time, then DtDevice::LedControl takes precedence over DtInpChannel::LedControl.

# **DtInpChannel::LnbEnable**

For satellite receivers (DTA-2137, DTE-3137): Enable or disable the LNB controller.

# **Function Arguments**

Enable

If set true, the LNB controller will be enabled. If false the LNB controller is disabled.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | LNB controller has successfully been enabled or disabled |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                    |
| DTAPI_E_INTERNAL      | Unexpected internal DTAPI error encountered              |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function    |
| DTAPI_E_NOT_SUPPORTED | This method is not supported by the underlying hardware  |

### **Remarks**

# **DtInpChannel::LnbEnableTone**

For satellite receivers (DTA-2137, DTE-3137): Enable or disable the 22kHz tone on the LNB.

# **Function Arguments**

Enable

Enable (=true) or disable (=false) generation of 22 kHz tone.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The 22kHz tone has successfully been enabled or disabled |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                    |
| DTAPI_E_INTERNAL      | Unexpected internal DTAPI error encountered              |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function    |
| DTAPI_E_NOT_SUPPORTED | This method is not supported by the underlying hardware  |

### **Remarks**

Before calling this method the on-board LNB controller must have been enabled using DtInpChannel::LnbEnable method. If the LNB controller is disabled this method will fail.

# **DtInpChannel::LnbSendBurst**

For satellite receivers (DTA-2137, DTE-3137): Transmit a tone burst of type A or B.

# **Function Arguments**

*BurstType* 

Controls the burst type.

| Value             | Meaning      |
|-------------------|--------------|
| DTAPI_LNB_BURST_A | Burst type A |
| DTAPI_LNB_BURST_B | Burst type B |

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | LNB burst has successfully been sent                    |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                   |
| DTAPI_E_INTERNAL      | Unexpected internal DTAPI error encountered             |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function   |
| DTAPI_E_NOT_SUPPORTED | This method is not supported by the underlying hardware |

### **Remarks**

Before calling this method the on-board LNB controller must have been enabled using **DtInpChannel::InbEnable** method. If the LNB controller is disabled this method will fail.

# DtInpChannel::LnbSendDiseqcMessage

For satellite receivers (DTA-2137, DTE-3137): Send a DiSEqC message. There are two overloads: one with and one without capture of the DiSEqC reply.

# **Function Arguments**

pMsgOut

Pointer to buffer with the message to send. The maximum allowed message size is 8.

NumBytesOut

Number of bytes in the message buffer.

pMsqIn

Pointer to buffer in which the reply message is stored. The maximum reply size is 8 bytes.

NumBytesIn

As input argument this argument specifies the size of the reply buffer. As output argument this argument returns the number of bytes in the reply message.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | LNB message was successfully sent                       |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                   |
| DTAPI_E_INTERNAL      | Unexpected internal DTAPI error encountered             |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function   |
| DTAPI_E_NOT_SUPPORTED | This method is not supported by the underlying hardware |

### Remarks

Before calling this method the on-board LNB controller must have been enabled using the **LnbEnable** method. If the LNB controller is disabled this method will fail.

# **DtInpChannel::LnbSetVoltage**

For satellite receivers (DTA-2137, DTE-3137): Set the LNB voltage.

# **Function Arguments**

Level

Controls the LNB voltage.

| Value         | Meaning            |
|---------------|--------------------|
| DTAPI_LNB_13V | LNB voltage is 13V |
| DTAPI_LNB_14V | LNB voltage is 14V |
| DTAPI_LNB_18V | LNB voltage is 18V |
| DTAPI_LNB_19V | LNB voltage is 19V |

# Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | LNB voltage has successfully been set                   |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                   |
| DTAPI_E_INTERNAL      | Unexpected internal DTAPI error encountered             |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function   |
| DTAPI_E_NOT_SUPPORTED | This method is not supported by the underlying hardware |

### **Remarks**

The LNB voltage settings will only have effect if the LNB controller has been enabled using the **LnbEnable** method.

# **DtInpChannel::PolarityControl**

Control the automatic polarity-detection circuitry of a DVB-ASI input channel.

```
DTAPI_RESULT DtInpChannel::PolarityControl(
   [in] int   PolarityControl // Polarity-control setting
);
```

# **Function Arguments**

PolarityControl

This argument controls inversion of the DVB-ASI signal.

| Value                 | Meaning  |
|-----------------------|--|
| DTAPI_POLARITY_AUTO   | Automatically detect and correct the polarity        |
| DTAPI_POLARITY_NORMAL | 'Normal' operation: do not invert the DVB-ASI signal |
| DTAPI_POLARITY_INVERT | Invert DVB-ASI signal                                |

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Polarity setting has been accepted   |
| DTAPI_E_INVALID_MODE  | The specified polarity-control value is invalid  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | Device is not a DVB-ASI device, or hardware does not support control of the polarity-detection process |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The DVB-ASI signal is sensitive to polarity. Without corrective measures, an inverted DVB-ASI signal – which may be caused by inverting distribution amplifiers – may be decoded incorrectly by a standard DVB-ASI receiver.

Automatic detection of DVB-ASI signal polarity (setting **DTAPI\_POLARITY\_AUTO**) can be successfully applied only when it is known a priori that the input signal is DVB/MPEG-2 compliant. For non MPEG-2 applications, *PolarityControl* should be set to **DTAPI\_POLARITY\_NORMAL**, or the input signal may be distorted badly due to periodic inversion.

Old revisions of the DTU-225 do not support these functions: These devices always operate as if PolarityControl is set to DTAPI POLARITY NORMAL.

# **DtInpChannel::Read**

Read data bytes from the input channel.

### **Function Arguments**

pBuffer

Pointer to the buffer into which the data bytes from the input channel will be written. The pointer must be aligned to a 32-bit word boundary, except for IP input channels for which there are no alignment restrictions.

NumBytesToRead

Transfer size: Number of bytes to be read from the input channel. The value of NumBytesToWrite must be a multiple of four, except for IP input channels, which can accept any positive value.

TimeOut

Transfer timeout: specifies the maximum time (in ms) to wait for the requested amount of data. This method will fail if the data cannot be read within the specified period. A value of 0 indicates that no time out applies and -1 specifies an infinite timeout.

#### Result

| DTAPI_RESULT            | Meaning  |
|-------------------------|--|
| DTAPI_OK                | Read operation has been completed successfully   |
| DTAPI_E_DEV_DRIVER      | Unclassified failure in device driver  |
| DTAPI_E_INVALID_BUF     | The buffer is not aligned to a 32-bit word boundary  |
| DTAPI_E_INVALID_SIZE    | The specified transfer size is negative or not a multiple of 4   |
| DTAPI_E_INVALID_TIMEOUT | Invalid timeout period specified   |
| DTAPI_E_NOT_ATTACHED    | Channel object is not attached to a hardware function  |
| DTAPI_E_TIMEOUT         | Read operation failed. Requested number of bytes could not be returned within the specified timeout period |

#### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

**Read** returns when NumBytesToRead bytes have been transferred into the buffer. The thread executing **Read** will sleep until sufficient data has entered the receive FIFO to complete the transfer. If either the input signal disappears or receive control is **DTAPI\_RXCTRL\_IDLE**, the **Read** call may sleep for an indefinite period of time (the thread 'hangs').

There are two ways to avoid such a 'hanging' thread:

- Before calling Read, check the FIFO load. Read an amount of data that is less than or equal to the FIFO load;
- Use Read with a time out.

The first method should be used if maximum performance is required. The second method is easier to use at the expense of some extra CPU cycles.

# **DtInpChannel::ReadFrame**

Read a single SDI frame from the input channel.

## **Function Arguments**

pFrame

Buffer to receive the SDI frame. Must be 32-bit aligned. NOTE: the format (e.g. 8-bit/10-bit, compressed/uncompressed, etc.) of the data returned in the frame buffer depends on the active receive-mode

FrameSize

As an input argument this argument indicates the size of the frame buffer. The frame buffer should be large enough to receive a complete frame and must be 32-bit aligned.

As an output argument this argument indicates the number of bytes returned in the frame buffer. The returned number of bytes includes any stuff bytes added to the end of the frame to achieve 32-bit alignment.

Timeout

Maximum amount of time in ms to wait for a complete frame. This method will fail if a frame cannot be returned within the specified period.

The value of this argument must larger than 0 or -1 to specify an infinite timeout. The default value is -1 (infinite).

### Result

| DTAPI_RESULT            | Meaning  |  |
|-------------------------|--|--|
| DTAPI_OK                | Read operation has been completed successfully   |  |
| DTAPI_E_DEV_DRIVER      | Unclassified failure in device driver  |  |
| DTAPI_E_INVALID_BUF     | The buffer is not aligned to a 32-bit word boundary  |  |
| DTAPI_E_BUF_TOO_SMALL   | The frame buffer is too small for receiving a complete frame                                 |  |
| DTAPI_E_INVALID_TIMEOUT | Invalid timeout period specified   |  |
| DTAPI_E_NOT_SDI_MODE    | The channel is not in SDI mode (see SetRxMode page 342)                                      |  |
| DTAPI_E_NOT_ATTACHED    | Channel object is not attached to a hardware function  |  |
| DTAPI_E_TIMEOUT         | Read operation failed. Could not return a complete frame within the specified timeout period |  |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

If an infinite timeout has been specified, this method will block until a complete frame has been received from the hardware.

# DtInpChannel::RegisterDemodCallback

Register a callback function for handling demodulator events.

## **Function Arguments**

pIEvent

Pointer to a callback function for handling demodulator events. Use NULL to stop handling events.

**Events** 

Events to register for. The table below contains the supported events. Multiple event constants can be OR-ed together to register for multiple events. To register for all demodulator events use the value -1.

| Event   | Description  |
|---|--|
| DTAPI_EV_TUNE_PARS_<br>HAVE_CHANGED   | Tuning parameters have changed (SetDemodControl, SetTunerFrequency or Tune was called) |
| DTAPI_EV_TUNE_FREQ_ Tuning frequency has changed (SetTunerFrequency was called) |  |

### Result

| DTAPI_RESULT   | Meaning   |  |
|--|---|--|
| DTAPI_OK   | Callback has been registered or deregistered successfully |  |
| DTAPI_E_NOT_ATTACHED Channel object is not attached to a hardware function |   |  |
| DTAPI_E_NOT_SUPPORTED  | Registering an event interface is not supported           |  |

# **DtInpChannel::Reset**

Reset input channel.

```
DTAPI_RESULT DtInpChannel::Reset(
   [in] int ResetMode
);
```

# **Function Arguments**

ResetMode

Specifies which part of the hardware and software stack is reset. The following values are defined (values cannot be OR-ed together):

| Value            | Meaning   |  |
|------------------|---|--|
| DTAPI_FIFO_RESET | Reset (clear) the Receive FIFO:  Data transfers are halted instantaneously  All data pending in the Receive FIFO is discarded  Receive-control state is reset to DTAPI_RXCTRL_IDLE  Receive-FIFO overflow flag is cleared |  |
| DTAPI_FULL_RESET | Full input-channel reset:  • All actions for DTAPI_FIFO_RESET, plus:  • Synchronisation-error flag (DTAPI_RX_SYNC_ERR) is cleared  • State machines in the device hardware are reset                                      |  |

## Result

| DTAPI_RESULT   | Meaning                               |  |
|--|---------------------------------------|--|
| DTAPI_OK   | Input channel has been reset          |  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver |  |
| DTAPI_E_MODE The value specified for ResetMode is invalid                  |                                       |  |
| DTAPI_E_NOT_ATTACHED Channel object is not attached to a hardware function |                                       |  |

## **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

An input-channel reset operation does not affect the following settings:

- Receive mode and insert-time-stamp flag (refer to DtInpChannel::SetRxMode)
- Polarity control of DVB-ASI inputs (refer to DtInpChannel::PolarityControl)

# DtInpChannel::SetAdcSampleRate

DTA-2135 only. Set sample rate for ADC input channels. The ADC sample-rate determines the rate at which samples are taken from the down-converted RF signal.

## **Function Arguments**

SampleRate

ADC sample-rate according to the table below.

| Value               | Meaning                      |  |
|---------------------|------------------------------|--|
| DTAPI_ADCCLK_OFF    | Clock is off                 |  |
| DTAPI_ADCCLK_27M    | 27Mhz Clock                  |  |
| DTAPI_ADCCLK_20M647 | 20.647059 Clock <sup>3</sup> |  |
| DTAPI_ADCCLK_13M5   | 13.5Mhz Clock                |  |

## Result

| DTAPI_RESULT          | Meaning  |  |
|-----------------------|--|--|
| DTAPI_OK              | ADC sample-rate has been changed successfully                                |  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver  |  |
| DTAPI_E_INVALID_MODE  | The specified receive mode is invalid or incompatible with the input channel |  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                        |  |
| DTAPI_E_NOT_SUPPORTED | Current device is not supported by this function                             |  |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

Only the first channel of the DTA-2135 provides access the down-converted RF signal.

The IF frequency of the DTA-2135 is 36.167Mhz. Since the available sample-rates are all well below the Nyquist rate the signal is under sampled. Please refer to sampling theory on details how to recover the signal.

 $<sup>^{3}</sup>$  The exact frequency is 27 \* 13 / 17 = 20.647059Mhz

# **DtInpChannel::SetAntPower**

For receivers: Turn antenna power on or off.

# **Function Arguments**

AntPower

Power state according to the table below.

| Value  | Meaning   |  |
|--|---|--|
| DTAPI_POWER_OFF  | No power is applied. The antenna needs to be self-powered |  |
| Power (+5V, 30mA) is applied to the external antenna the antenna connector(s) of the channel |   |  |

## Result

| DTAPI_RESULT   | Meaning  |  |
|--|--|--|
| DTAPI_OK   | Power state has been changed successfully              |  |
| DTAPI_E_INVALID_MODE   | The specified antenna power mode value is invalid      |  |
| DTAPI_E_NOT_ATTACHED Channel object is not attached to a hardware function |  |  |
| DTAPI_E_NOT_SUPPORTED  | The device does not have a provision for antenna power |  |

# **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

After Attach and after Reset, antenna power is turned off.

# **DtInpChannel::SetDemodControl**

Set the demodulation parameters.

## **Function Arguments**

pDemodPars

Pointer to a structure containing the demodulation parameters. See class **DtDemodPars** for possible demodulation parameters.

ModType

Expected type of modulation of the input signal. See GetDemodControl for a list of applicable values, with the exception of the DTAPI\_MOD\_TYPE\_UNK value, which cannot be used in the SetDemodControl method.

```
ParXtra0, ParXtra1, ParXtra2
```

Additional parameters further defining the demodulation process. See GetDemodControl for a list of applicable values, with the exception of the DTAPI\_MOD\_XXX\_UNK values, which cannot be used in the SetDemodControl method.

Many of the additional parameters can be automatically detected by the demodulator hardware and therefore it is not always required to fully define the demodulation parameters. However, providing more detail will help the demodulator to achieve signal lock faster, as it will not have to autodetect them.

The tables below show the limitations with respect to automatic detection:

### **Automatic detection**

ModType

The modulation type must always be set explicitly and using automatic detection is not allowed.

```
ParXtra0, ParXtra1, ParXtra2
```

The table below lists which parameters can be automatically detected for each of the modulation standards:

| Modulation Mode: ATSC |               |  |
|-----------------------|---------------|--|
| ParXtra0              | Constellation | No automatic detection supported (constellation must be specified) |
| ParXtra2              | Symbol rate   | Automatically detected by definition                               |

| Modulation Mode: DVB-S |                    |                             |
|------------------------|--------------------|-----------------------------|
| ParXtra0               | Code rate          | DTAPI_MOD_CR_AUTO           |
| ParXtra1               | Spectral inversion | DTAPI_MOD_S_S2_SPECINV_AUTO |
| ParXtra2               | Symbol rate        | DTAPI_MOD_SYMRATE_AUTO      |

| Modulation Mode: DVB-S.2 |                    |                                      |
|--------------------------|--------------------|--------------------------------------|
| ParXtra0                 | Code rate          | DTAPI_MOD_CR_AUTO                    |
| ParXtra1                 | Spectral inversion | Automatically detected by definition |
|                          | Pilots             | DTAPI_MOD_S2_PILOTS_AUTO             |
|                          | FEC frame size     | DTAPI_MOD_S2_FRM_AUTO                |
| ParXtra2                 | Symbol rate        | DTAPI_MOD_SYMRATE_AUTO               |

| Modulation Mode: DVB-T |                |  |
|------------------------|----------------|--|
| ParXtra0               | Code rate      | DTAPI_MOD_CR_AUTO  |
| ParXtra1               | Bandwidth      | No automatic detection supported (bandwidth must be specified) |
|                        | Constellation  | DTAPI_MOD_DVBT_CO_AUTO   |
|                        | Guard interval | DTAPI_MOD_DVBT_GU_AUTO   |
|                        | Interleaving   | DTAPI_MOD_DVBT_IL_AUTO   |
|                        | Tx mode        | DTAPI_MOD_DVBT_MD_AUTO   |

| Modulation Mode: QAM |              |  |
|----------------------|--------------|--|
| ParXtra0             | J.83 Annex   | No automatic detection supported (Annex must be specified)   |
| ParXtra1 (QAM-B)     | Interleaving | Automatically detected by definition   |
| ParXtra2             | Symbol rate  | DTAPI_MOD_SYMRATE_AUTO Automatic detection of symbol rate is supported by the DTA-2136, DTA-2138, DTA-2139 and the DTU-234. The DTU-236 supports automatic detection of the symbol rate for QAM-B only. You can directly set the symbol rate the tuner should lock to for the DTA-2136, DTA-2139 and DTU-236. For QAM-A and QAM-C on the DTU-236 this is the only possibility since automatic detection isn't supported. |

## Result

| DTAPI_RESULT  | Meaning  |
|---|--|
| DTAPI_OK  | The modulation parameters have been set successfully       |
| DTAPI_E_DEV_DRIVER                                  | Unclassified failure in device driver                      |
| DTAPI_E_INVALID_BANDWIDTH                           | Invalid value for bandwidth field                          |
| DTAPI_E_INVALID_CONSTEL                             | Invalid value for constellation field                      |
| DTAPI_E_INVALID_FHMODE                              | Invalid value for frame-header mode field                  |
| DTAPI_E_INVALID_GUARD                               | Invalid value for guard-interval field                     |
| DTAPI_E_INVALID_INTERLVNG                           | Invalid value for interleaving field                       |
| DTAPI_E_INVALID_J83ANNEX<br>DTAPI_E_INVALID_ROLLOFF | Invalid value for J.83 annex                               |
| DTAPI_E_INVALID_MODE                                | Modulation type is incompatible with demodulator           |
| DTAPI_E_INVALID_MODPARS                             | Invalid demodulation parameters                            |
| DTAPI_E_INVALID_PILOTS                              | Pilots cannot be specified in C=1 mode                     |
| DTAPI_E_INVALID_RATE                                | Invalid value for convolutional rate or FEC code rate      |
| DTAPI_E_INVALID_SYMRATE                             | Invalid value for symbol rate                              |
| DTAPI_E_INVALID_T2PROFILE                           | Invalid value for DVB-T2 profile                           |
| DTAPI_E_INVALID_TRANSMODE                           | Invalid value for transmission-mode field                  |
| DTAPI_E_INVALID_USEFRAMENO                          | Invalid value for use-frame-numbering field                |
| DTAPI_E_NOT_ATTACHED                                | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED                               | This function is not supported for the underlying hardware |

# **Remarks**

For DTA-2136 and DTA-2139 J.83 annex A (DVB-C) QAM-128 is not supported For DTA-2131 a low C/N and MER could be measured when using a DVB-T2 configuration including Pilot Pattern 8 (PP8).

# DtInpChannel::SetErrorStatsMode

Set the way error statistics are gathered for the specified type of modulation. This method is currently only supported by the DTA-2137.

# **Function Arguments**

ModType

Type of modulation for which the given error statistics mode is set.

| Value                  | Meaning          |
|------------------------|------------------|
| DTAPI_MOD_DVBS_QPSK    | DVB-S, QPSK      |
| DTAPI_MOD_DVBS2_8PSK   | DVB-S.2, 8-PSK   |
| DTAPI_MOD_DVBS2_16APSK | DVB-S.2, 16-APSK |
| DTAPI_MOD_DVBS2_32APSK | DVB-S.2, 32-APSK |
| DTAPI_MOD_DVBS2_QPSK   | DVB-S.2, QPSK    |

Mode

Desired error-statistics mode.

| Value                | Meaning  |
|----------------------|--|
| DTAPI_ERRORSTATS_BER | (Default for each type of modulation) Bit error rate |
| DTAPI_ERRORSTATS_RS  | Reed-Solomon error count                             |

### Result

| DTAPI_RESULT            | Meaning   |
|-------------------------|---|
| DTAPI_OK                | The error-statistics mode has been changed successfully |
| DTAPI_E_INVALID_MODTYPE | The specified type of modulation is not valid           |
| DTAPI_E_INVALID_PARS    | The combination of ModType and Mode is not valid        |

#### Remarks

Reed-Solomon error counts (error-statistics mode **DTAPI\_ERRORSTATS\_RS**) can only be used for DVB-S.

# **DtInpChannel::SetFifoSize**

Set the size the receive FIFO to a specified value. This function is only supported for IP-streams.

The FIFO size can only be changed if receive control is **IDLE**.

## **Function Arguments**

FifoSize

Requested size of the receive FIFO in number of bytes.

## Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | The size of the receive FIFO has been set successfully                     |
| DTAPI_E_IN_USE       | The FIFO size cannot be changed because receive control state is not IDLE. |
| DTAPI_E_INVALID_SIZE | The specified FIFO size is negative or zero                                |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function                      |
| DTAPI_E_OUT_OF_MEM   | Receive FIFO cannot be allocated   |

## **Remarks**

The size of the receive FIFO determines the amount of packet data that can be buffered in the driver. It does not increase the receive delay.

# **DtInpChannel::SetIoConfig**

Set the I/O configuration of the physical port attached to the input channel. This is the same function as DtDevice::SetIoConfig applied to the physical port corresponding to this channel.

# **Function Arguments**

```
Group, Value, SubValue, ParXtra0, ParXtra1

I/O configuration parameters, see DtDevice::SetIoConfig.
```

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | I/O configuration has been set successfully           |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |
| Other result codes   | See DtDevice::SetIoConfig                             |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

# **DtInpChannel::SetIpPars**

Set parameters for the reception of TS-over-IP streams.

# **Function Arguments**

*SetIpPars* 

New parameter set to be applied. Please refer to the DtIpPars page for a description of the parameters.

## Result

| DTAPI_RESULT               | Meaning   |
|----------------------------|---|
| DTAPI_OK                   | TS-over-IP parameters have been applied successfully  |
| DTAPI_E_BIND               | Error binding port to IP address  |
| DTAPI_E_IN_USE             | Function Arguments cannot be changed because the channel is busy. The receive-control state should be switched back to idle first |
| DTAPI_E_INVALID_DIFFSERV   | The m_Diffserv parameter is invalid   |
| DTAPI_E_INVALID_FECMODE    | The m_FecMode parameter is invalid  |
| DTAPI_E_INVALID_FEC_MATRIX | The m_FecNumCols/m_FecNumRows is invalid  |
| DTAPI_E_INVALID_FLAGS      | The m_Flags parameter is invalid  |
| DTAPI_E_INVALID_MODE       | The m_Mode parameter is invalid   |
| DTAPI_E_INVALID_IP_ADDR    | The m_lp or m_lp2 parameter is invalid  |
| DTAPI_E_INVALID_PORT       | The m_Port parameter is invalid.  |
| DTAPI_E_INVALID_PROTOCOL   | The m_Protocol parameter is invalid   |
| DTAPI_E_INVALID_SRCIP_ADDR | The m_SrcFltIp or m_SrcFltIp2 parameter is invalid  |
| DTAPI_E_INVALID_VIDEOSTD   | The m_Videostandard in member m_lpProfile is invalid  |
| DTAPI_E_IPV6_NOT_SUPPORTED | IpV6 is not supported on this operating system  |
| DTAPI_E_MULTICASTOIN       | Error joining multicast address   |
| DTAPI_E_NO_ADAPTER_IP_ADDR | The network IP address could not be retrieved. Check the network driver IP protocol settings                                      |
| DTAPI_E_NO_LINK            | The IP parameters cannot be applied because the link is down. Check network cable and speed settings                              |
| DTAPI_E_NOT_ATTACHED       | Channel object is not attached to a hardware function   |
| DTAPI_E_NW_DRIVER          | The IP address could not be retrieved from the network driver   |
| DTAPI_E_NWAP_DRIVER        | An error occurred using the Advanced Protocol Driver.   |
| DTAPI_E_VLAN_NOT_FOUND     | The VLAN with the given ID is not found   |

## **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

**SetIpPars** should be called at least once after attaching to the hardware but before setting the receive-control state to **DTAPI\_RXCTRL\_RCV**.

After the initial call to **SetIpPars**, parameters can be changed again, but only when the receive-control state is **DTAPI\_RXCTRL\_IDLE**.

When the destination IP address is a multicast IP address, DTAPI automatically joins the multicast group upon the first invocation of **SetIpPars**. When this method is called again, membership of the old multicast group is dropped and, if required, the new multicast group is joined.

# **DtInpChannel::SetPars**

Set parameter settings for the demodulator. This function accepts an array of **DtPar** structures so that multiple parameters can be set in one call.

## **Function Arguments**

NumPars

Specifies the size, in number of DtPar entries, of the caller-supplied pPars array.

pPar

Pointer to a caller-supplied array of DtPar structures.

## Result

| DTAPI_RESULT         | Meaning                                     |
|----------------------|---|
| DTAPI_OK             | Parameter values have been set successfully |
| DTAPI_E_INVALID_BUF  | Invalid buffer pointer is passed            |
| DTAPI_E_INVALID_TYPE | Parameter type is incorrect                 |
| DTAPI_E_NOT_ATTACHED | Demodulator is not attached                 |
| DTAPI_E_NOT_IDLE     | Demodulator is already started              |

## **Remarks**

Demodulation should not yet been started when this function is called.

# **DtInpChannel::SetPower**

DTA-122 only. Turn on/off power for a target adapter attached to the DTA-122.

# **Function Arguments**

Power

Power state according to the table below.

| Value           | Meaning  |
|-----------------|--|
| DTAPI_POWER_OFF | No power is applied. The 25-pin sub-D connector is compatible with DVB-SPI |
| DTAPI_POWER_ON  | Apply power (+5V) to pin 12 and 25 of the 25-pin sub-D connector           |

# Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Power state has been changed successfully                          |
| DTAPI_E_INVALID_MODE  | The specified power-mode value is invalid                          |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function              |
| DTAPI_E_NOT_SUPPORTED | The device does not support a power connection for target adapters |

# **Remarks**

After Attach and after Reset, power is turned off.

# DtInpChannel::SetRxControl

Set receive control.

# **Function Arguments**

RxControl

New receive control value according to the table below.

| Value            | Meaning  |
|------------------|--|
|                  | The input stream input is "disconnected" from the receive FIFO: Incoming transport packets are not stored in the receive FIFO. |
| DTAPI_RXCTRL_RCV | Normal operation. Incoming transport packets are stored in the receive FIFO.   |

### Result

| DTAPI_RESULT         | Meaning  |  |
|----------------------|--|--|
| DTAPI_OK             | Receive-control state has been changed successfully  |  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver  |  |
| DTAPI_E_INVALID_MODE | The specified receive-control state is invalid or incompatible with the attached hardware function                                     |  |
| DTAPI_E_NO_IP_PARS   | For TS-over-IP channels: receive-control state cannot be set to DTAPI_RXCTRL_RCV because TS-over-IP parameters have not been specified |  |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function  |  |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

If receive control is set to **DTAPI\_RXCTRL\_RCV**, but the application does not read data from the receive FIFO, then the receive FIFO will quickly overflow.

Calling AttachToPort, Reset or ClearFifo will initialize receive control to DTAPI\_RXCTRL\_IDLE.

# DtInpChannel::SetRxMode

Set the receive mode for the input channel. It determines the conversions that will be applied to the input signal. Receive mode has to be set <u>before</u> setting receive control to **DTAPI\_RXCTRL\_RCV**.

**Note**: For ASI/SDI input channels, first configure the input port for ASI or SDI with **SetIoConfig**, group **IOSTD**. If an ASI-specific receive mode is applied to a channel that is configured for SDI (or vice versa), an error will be returned.

# **Function Arguments**

RxMode

Receive mode according to the table below.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_RXMODE_ST188 | Transport Stream - 188-byte mode<br>Always store 188-byte packets in the receive FIFO.<br>When the input contains 204-byte packets, the 16 trailing bytes<br>are dropped. Input data without 188- or 204-byte packet struc-<br>ture is dropped.  |
| DTAPI_RXMODE_ST204 | Transport Stream - 204-byte mode<br>Always store 204-byte packets in the receive FIFO.<br>When the input contains 188-byte packets, 16 zero bytes are<br>appended. Input data without 188- or 204-byte packet struc-<br>ture is dropped.   |
| DTAPI_RXMODE_STMP2 | Transport Stream - MPEG-2 mode<br>Store 188- or 204-byte packets in the receive FIFO without<br>modification. Input data without 188- or 204-byte packet struc-<br>ture is dropped.  |
| DTAPI_RXMODE_STRAW | Transport Stream - Raw mode No notion of packets. All incoming valid data bytes are stored in the Receive FIFO. For DVB-ASI input channels, this mode is incompatible with DTAPI_POLARITY_AUTO! Please refer to the Remarks section.   |
| DTAPI_RXMODE_STTRP | Transport Stream - Transparent mode All incoming data bytes are stored in the receive FIFO. The data is aligned to packet boundaries if valid packets are detected. This format includes a trailer that contains information about the detected packet size, sync status and valid data bytes within the packet. |
| DTAPI_RXMODE_STL3  | L.3 Baseband frame mode (DTA-2137/DTA-2137C only). No notion of transport stream packets. The entire DVB-S2 baseband frame is passed with the addition of an L.3 Header. Dummy frames are skipped. See DTAPI Manual – Overview and Data Formats.pdf for more details.  |

| DTAPI_RXMODE_STL3FULL | Full L.3 Baseband frame mode Similar to <b>DTAPI_RXMODE_STL3</b> . Dummy frames are encoded with ModCod is '0'.        |
|-----------------------|--|
| DTAPI_RXMODE_RAWASI   | Raw ASI symbols<br>(Ports needs CAP_RAWASI) The complete incoming data stream<br>can be read as packed 10-bit symbols. |

The following modes are valid for SDI capable channels only.

| Value                   | Meaning  |
|-------------------------|--|
| DTAPI_RXMODE_SDI_FULL   | Full frame mode<br>Store all SDI data (i.e. complete frames).  |
| DTAPI_RXMODE_SDI_ACTVID | Active video mode Store only the active video part of each SDI frame. This mode should only be used in combination with Huffman compression (i.e. with DTAPI_RXMODE_SDI_HUFFMAN flag)! |

The following mode is valid for TS-over-IP reception only.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_RXMODE_IPRAW | Raw IP mode Store unprocessed IP packets in the buffer. If error correction is requested, store FEC streams too. Each IP packet returned by a call the DtInpChannel::Read will be preceded by a DtRawIpHeader structure. |

The receive mode can be optionally combined (OR-ed) with the following flag:

| Value                    | Meaning   |
|--------------------------|---|
| DTAPI_RXMODE_TIMESTAMP32 | Time-stamped mode (32-bit timestamps) Insert a 32-bit timestamp before each packet. The timestamp is a sample of the system clock counter on the device. This flag may not be specified in raw mode (DTAPI_RXMODE_STRAW) or any of the SDI modes.   |
| DTAPI_RXMODE_TIMESTAMP64 | Time-stamped mode (64-bit timestamps) (hardware shall support DTAPI_CAP_TIMESTAMP64). Insert a 64-bit timestamp before each packet. The timestamp is a sample of the system clock counter on the device. This flag may not be specified in raw mode (DTAPI_RXMODE_STRAW) or any of the SDI modes. |
| DTAPI_RXMODE_SDI         | SDI mode Operate in SDI mode; Otherwise ASI mode will be used. This flag is already OR-ed into DTAPI_RXMODE_SDI_FULL and DTAPI_RXMODE_SDI_ACTVID.   |
| DTAPI_RXMODE_SDI_10B     | 10-bit SDI samples<br>Provide 10-bit SDI samples. If both this flag and the 16B flag<br>are omitted, 8-bit samples is assumed.  |

| DTAPI_RXMODE_SDI_16B     | 16-bit SDI samples Provide 10-bit SDI samples packed in 16-bits. Only the 10 least significant bits of each 16-bit sample will be used. If both this flag and the 10B flag are omitted, 8-bit samples is assumed.  16B mode is only supported by cards having the CAP_MATRIX capability.         |
|--------------------------|--|
| DTAPI_RXMODE_SDI_HUFFMAN | Huffman compression Compress the SDI using Huffman compression.  |
| DTAPI_RXMODE_SDI_STAT    | SDI statistics Inserts statistical information before each SDI frame (a total of 32 bytes). If the DTAPI_RXMODE_TIMESTAMP32 is also enabled, the SDI statistics will be inserted after the timestamp. This mode is only supported for IP channels.  See the DtSdiIpFrameStat struct for details. |

#### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Receive mode has been changed successfully                                   |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver  |
| DTAPI_E_INVALID_MODE  | The specified receive mode is invalid or incompatible with the input channel |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                        |
| DTAPI_E_NOT_SUPPORTED | Current device is not supported by this function                             |

#### Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

In receive mode <code>DTAPI\_RXMODE\_STRAW</code> ("raw" mode), the input channel does not care about the packet structure of the incoming transport stream: All data bytes are stored in the input buffer. For <code>DVB-ASI</code> input channels, raw mode can only work reliably if <code>polarity control</code> is set to <code>DTAPI\_POLARITY\_NORMAL</code> or <code>DTAPI\_POLARITY\_INVERT</code>. If polarity control is set to <code>DTAPI\_POLARITY\_AUTO</code>, disaster may be the result: Automatic polarity detection assumes that the input has a valid packet structure. If such a structure cannot be found, the device tries again with the input signal inverted. In raw mode, such inversion may occur periodically and severely corrupt the input data!

For the DTA-122 and DTA-2142 DVB-SPI ports, packet synchronisation in modes DTAPI\_RXMODE\_ST188 and DTAPI\_RXMODE\_ST204 is based on the PSYNC signal, not on the value of the first byte of the packet: The value of DATA at a PSYNC pulse is stored in the input buffer, even if the value is not 0x47.

Timestamps are stored in little-endian format: the first byte contains the least-significant 8 bits, the fourth byte the most-significant 8 bits. 32-bit timestamps can be read by code like this:

unsigned int TimeStamp = \*(unsigned int\*) PtrInCharBuffer;

# **DtInpChannel::SetStreamSelection**

Select a DAB-stream, PLP in a DVB-C2 or DVB-T2 stream, T2-MI stream or ISDB-T layer

# **Function Arguments**

StreamSel

Specification of the PLP selection criteria.

#### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The PLP has been selected successfully  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver   |
| DTAPI_E_DSLICE_ID     | Invalid data slice identifier   |
| DTAPI_E_INVALID_MODE  | The current demodulation type does not correspond to the type of the selection parameters |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                                     |
| DTAPI_E_NOT_SUPPORTED | The device does not support DAB, DVB-C2, DVB-T2, ISDB-T or T2-MI                          |
| DTAPI_E_PLP_ID        | Invalid physical layer pipe identifier  |
| DTAPI_E_LAYER_ID      | Invalid ISDB-T layer identifier   |

## Remarks

This function requires exclusive access (AttachToPort was called with Exclusive=true).

If the specified PLP/Layer is not available another PLP/Layer may be selected.

# **DtInpChannel::SetTunerFrequency**

Set tuner frequency.

# **Function Arguments**

FreqHz

Desired tuning frequency (in Hz). The table below specifies the valid range and the step size with which the RF rate can be specified. FreqHz is rounded to the nearest RF frequency compatible with the frequency resolution.

| Device   | Valid Range                   | Step Size |
|----------|-------------------------------|-----------|
| DTU-234  | 53,000,000 - 865,000,000 Hz   | -         |
| DTU-235  | 50,000,000 - 860,000,000 Hz   | -         |
| DTU-236  | 44,000,000 - 865,000,000 Hz   | -         |
| DTA-2135 | 50,000,000 - 860,000,000 Hz   | -         |
| DTA-2136 | 54,000,000 - 1002,000,000 Hz  | -         |
| DTA-2137 | 950,000,000 - 2150,000,000 Hz | -         |

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The tuner frequency has been set successfully                                |
| DTAPI_E_INVALID_FREQ  | The specified frequency is incompatible (too low or too high) with the tuner |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                        |
| DTAPI_E_NOT_SUPPORTED | The channel does not include a tuner   |

# **DtInpChannel::SpectrumScan**

Scans the spectrum and returns RF levels using a callback mechanism.

## **Function Arguments**

pCallback

A callback function with callback prototype **DtSpsProgressFunc** that will be executed by the asynchronous spectrum scan.

p0paque

An optional pointer to a user object that is returned in the callback function.

ScanType

```
The statistic RF level type to use for the scan. This can be any of the following values: DTAPI_STAT_RFLVL_NARROW, DTAPI_STAT_RFLVL_CHAN or DTAPI_STAT_RFLVL_CHAN.
```

FreqHzSteps

This optional argument specifies the step size of the spectrum scan in Hertz.

*StartFreqHz* 

This optional argument specifies the starting frequency of the spectrum scan in Hertz.

EndFreqHz

This optional argument specifies the ending frequency of the spectrum scan in Hertz.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The spectrum scan succeeded successfully   |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | The spectrum scan is not supported by the attached hardware  |
| DTAPI_E_INVALID_FREQ  | The range of frequencies specified with <code>FreqHzSteps</code> , <code>StartFreqHz</code> and <code>EndFreqHz</code> is incompatible (too low or too high) with the tuner on the attached hardware |

### **Remarks**

This function requires exclusive access (AttachToPort was called with Exclusive=true).

The SpectrumScan method is currently only supported by the DTU-236A and the DTU-238.

# **DtInpChannel::Tune**

Tunes the demodulator to a frequency using the specified demodulation parameters. This function basically combines the functionality of the SetDemodControl and SetTunerFrequency methods.

## **Function Arguments**

FreqHz

Desired tuning frequency (in Hz). See **SetTunerFrequency** for the allowed values.

```
ModType, ParXtra0, ParXtr1, ParXtra2
```

'Old style' demodulation parameters to use while tuning. Refer to **SetDemodControl** for more details about these parameters.

```
pDemodPars
```

'New style' demodulation parameters to use while tuning. Refer to **SetDemodControl** for more details about these parameters.

#### Result

| DTAPI_RESULT  | Meaning  |
|---|--|
| DTAPI_OK  | The tuner frequency has been set successfully                                |
| DTAPI_E_DEV_DRIVER                                  | Unclassified failure in device driver  |
| DTAPI_E_INVALID_BANDWIDTH                           | Invalid value for bandwidth field  |
| DTAPI_E_INVALID_CONSTEL                             | Invalid value for constellation field  |
| DTAPI_E_INVALID_FHMODE                              | Invalid value for frame-header mode field                                    |
| DTAPI_E_INVALID_FREQ                                | The specified frequency is incompatible (too low or too high) with the tuner |
| DTAPI_E_INVALID_GUARD                               | Invalid value for guard-interval field                                       |
| DTAPI_E_INVALID_INTERLVNG                           | Invalid value for interleaving field   |
| DTAPI_E_INVALID_J83ANNEX<br>DTAPI_E_INVALID_ROLLOFF | Invalid value for J.83 annex   |
| DTAPI_E_INVALID_MODE                                | Modulation type is incompatible with demodulator                             |
| DTAPI_E_INVALID_MODPARS                             | Invalid demodulation parameters  |
| DTAPI_E_INVALID_PILOTS                              | Pilots cannot be specified in C=1 mode                                       |

| DTAPI_E_INVALID_RATE       | Invalid value for convolutional rate or FEC code rate |
|----------------------------|---|
| DTAPI_E_INVALID_SYMRATE    | Invalid value for symbol rate                         |
| DTAPI_E_INVALID_T2PROFILE  | Invalid value for DVB-T2 profile                      |
| DTAPI_E_INVALID_TRANSMODE  | Invalid value for transmission-mode field             |
| DTAPI_E_INVALID_USEFRAMENO | Invalid value for use-frame-numbering field           |
| DTAPI_E_NOT_ATTACHED       | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED      | The channel does not include a tuner                  |

# **DtOutpChannel**

# **DtOutpChannel**

Class representing an output channel for transmitting the following formats:

- MPEG-2 transport stream over ASI, SPI or IP
- Serial Digital Interface (SDI)

class DtOutpChannel;

# **DtOutpChannel::AttachToPort**

Attach the output-channel object to a specific physical port.

## **Function Arguments**

pDtDvc

Pointer to the device object that represents a DekTec device. The device object must have been attached to the device hardware.

Port

Physical port number. The channel object is attached to this port. The port number of the top-most port is 1, except on the DTA-160 and DTA-2160, on which the top-most Ethernet port is port #4.

ProbeOnly

Probe whether the channel is in use, but do not actually attach.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Channel object has been attached successfully to the port   |
| DTAPI_OK_FAILSAFE    | Channel object has been attached successfully to the hardware function. The application shall call the SetFailsafeAlive method on a regular basis to prevent the release of the failsafe relay, which will physically connect the input port to the output port.  This is not an error code; It is intended to make the application aware of failsafe mode. |
| DTAPI_E_ATTACHED     | Channel object is already attached  |
| DTAPI_E_DEVICE       | Pointer <i>pDtDvc</i> is not valid or the device object is not attached to a hardware device  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver   |
| DTAPI_E_IN_USE       | Another channel object is already attached to this port   |
| DTAPI_E_NO_DT_OUTPUT | Port is not an output   |
| DTAPI_E_NO_SUCH_PORT | Invalid port number for this device   |
| DTAPI_E_OUT_OF_MEM   | TS-over-IP: Receive FIFO cannot be allocated  |

# **DtOutpChannel::ClearFifo**

Clear contents of the transmit FIFO and set transmit control to IDLE. Clears the output channel's status flags: transmit-FIFO-underflow flag (DTAPI\_TX\_FIFO\_UFL) and transmit-synchronisation-error flag (DTAPI\_TX\_SYNC\_ERR).

# **Function Arguments**

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Transmit FIFO has been cleared                        |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

## **Remarks**

The effects of ClearFifo are equivalent to Reset (DTAPI FIFO RESET).

# **DtOutpChannel::ClearFlags**

Clear latched status flag(s).

# **Function Arguments**

Latched

Latched status flag(s) to be cleared. Multiple flags can be cleared with one function call by ORing the bit positions to be cleared. The following flags are latched and can be cleared:

| Value                 | Meaning      |
|-----------------------|--------------|
| DTAPI_TX_CPU_UFL      | See GetFlags |
| DTAPI_TX_DMA_UFL      | " "          |
| DTAPI_TX_FIFO_UFL     | " "          |
| DTAPI_TX_READBACK_ERR | " "          |
| DTAPI_TX_SYNC_ERR     | " "          |
| DTAPI_TX_TARGET_ERR   | " "          |
| DTAPI_TX_LINK_ERR     | " "          |
| DTAPI_TX_DATA_ERR     | " "          |

## Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Flag(s) have been successfully cleared                |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

### Remarks

Some status flags that are queried with GetFlags are not latched and therefore cannot be cleared.

The latched status flags are also automatically reset after attaching and after Reset. A call to ClearFifo clears DTAPI TX FIFO UFL and DTAPI TX SYNC ERR.

# **DtOutpChannel::ClearSfnErrors**

Clear the SFN error flag(s). See GetSfnStatus for the list of error flags.

```
DTAPI_RESULT DtOutpChannel::ClearSfnErrors();
```

# **Function Arguments**

# Result

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | Flag(s) have been successfully cleared  |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# **DtOutpChannel::Detach**

Detach output channel object from a hardware function. Frees resources allocated for the output channel.

## **Function Arguments**

DetachMode

Specifies how the channel object should detach from the hardware function. If <code>DetachMode</code> is 0, the object is detached without further action. A number of flags listed below are defined to detach from the hardware function in a specific way. The flags can be OR-ed together to their combine behaviour, with some exceptions as listed in the table.

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_INSTANT_DETACH  | Clear the contents of the transmit FIFO and detach without waiting until pending data in the FIFO has been transmitted. This flag may not be combined with <code>DTAPI_WAIT_UNTIL_SENT</code> .   |
| DTAPI_WAIT_UNTIL_SENT | Sleep until all pending data in the transmit FIFO has been transmitted. If this flag is combined with other flags, the wait is executed before the action associated with the other flags. This flag may not be combined with <code>DTAPI_INSTANT_DETACH</code> . |

## Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Channel object has been detached successfully from the hardware function        |
| DTAPI_E_INVALID_FLAGS | An invalid combination of detach flags was specified                            |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function, so it cannot be detached |

## **Remarks**

For ASI channels, if packet stuffing is turned on, the output channel keeps transmitting null packets after detaching.

**Detach** may take a long time if **DTAPI\_WAIT\_UNTIL\_SENT** is specified while the FIFO still contains data and transmit control is **IDLE**.

# **DtOutpChannel::GetAttribute**

Get the value of an attribute for the port to which this channel is attached.

# **Function Arguments**

AttrId

Identifies the attribute that is to be retrieved. Please refer to **DtDevice::GetAttribute** for a list of attributes that can be retrieved.

AttrValue

Output argument that receives the attribute value.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The attribute value has been retrieved successfully   |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | The attribute is not supported for this port          |

# **DtOutpChannel::GetDescriptor**

Get hardware function descriptor for this output channel.

```
DTAPI_RESULT DtOutpChannel::GetDescriptor(
  [out] DtHwFuncDesc& HwFuncDesc // Hardware function descriptor
);
```

# **Function Arguments**

*HwFuncDesc* 

Output argument that receives the hardware function descriptor.

## Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | The hardware function descriptor been retrieved successfully |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function        |

# DtOutpChannel::GetExtClkFreq

Get an estimate of the frequency of the external clock (DTA-102 and DTA-2142 only).

# **Function Arguments**

ExtClkFreq

Output argument that is set to a measurement of the frequency of the signal applied to the external-clock input. For an accurate estimate, the external clock signal must be present and stable for at least one second.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | External-clock frequency has been retrieved successfully |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                    |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function    |

### Remarks

The frequency returned is a *byte* rate that must be multiplied by 8 or 8\*204/188 to obtain the corresponding transport-stream bitrate.

# **DtOutpChannel::GetFailsafeAlive**

Get current status of the watchdog that controls the failsafe relay.

# **Function Arguments**

Alive

Indicates the current status of the watchdog.

If Alive is true, all is fine and the board is operating as normal. The failsafe timeout has not expired and the relay is in normal operational mode: the input port is connected to the input channel and the output channel is connected to the output port.

If Alive is false, the watchdog timer has expired before **SetFailsafeAlive** was called. The input-to-output relay is switched to failsafe mode: the input port is connected directly to the output port.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The watchdog status has been retrieved successfully       |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                     |
| DTAPI_E_CONFIG        | The channel is not configured to operate in failsafe mode |
| DTAPI_E_NOT_SUPPORTED | The channel is not capable of operating in failsafe mode  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function     |

# **DtOutpChannel::GetFailsafeConfig**

Get configuration info about failsafe mode.

## **Function Arguments**

Enable

Operation in failsafe mode has been enabled or disabled (see also SetFailsafeConfig).

Timeout

Current watchdog timeout period (in ms).

## Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Failsafe configuration has been retrieved successfully    |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                     |
| DTAPI_E_CONFIG        | The channel is not configured to operate in failsafe mode |
| DTAPI_E_NOT_SUPPORTED | The channel is not capable of operating in failsafe mode  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function     |

## **DtOutpChannel::GetFifoLoad**

Get the current load of the channel's transmit FIFO.

### **Function Arguments**

FifoLoad

This output argument is set to the number of bytes in the transmit FIFO.

SubChan

Sub-channel selection, used for multi-channel modulation see DtOutpChannel::SetMultiModConfig.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | The FIFO load has been retrieved successfully         |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

#### Remarks

If transmit control is **SEND**, then the value retrieved with **GetFifoLoad** may not be exact: it approximates the load of the transmit FIFO.

If a DMA transfer is in progress and/or the transmit control is **SEND**, then every call to **GetFifoLoad** may return a different value.

## **DtOutpChannel::GetFifoSize**

Get the current size of the channel's transmit FIFO (GetFifoSize), or the maximum size supported by the channel (GetFifoSizeMax), or a typical size of the transmit FIFO that generally should work well (GetFifoSizeTyp).

### **Function Arguments**

FifoSize

Current, maximum or typical size of the transmit FIFO in number of bytes.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | The requested FIFO size has been retrieved successfully |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function   |

#### Remarks

The actual size of the transmit FIFO is adjustable with **SetFifoSize**.

DekTec hardware devices have a transmit FIFO that has a size of at least 8Mbytes.

For modulators GetFifoSizeMax returns the size of the hardware FIFO.

## **DtOutpChannel::GetFlags**

Get current and latched value of the output channel's status flags.

### **Function Arguments**

Status

Output argument that receives the current status of the output channel. Each status flag is represented by one bit. Multiple status flags can be set at the same time. If none of the status flags is asserted, <code>Status</code> is set to zero.

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_TX_CPU_UFL      | Modulation error caused by low CPU performance  |
| DTAPI_TX_DMA_UFL      | Modulation error caused by low DMA performance  |
| DTAPI_TX_FIFO_UFL     | A transmit-FIFO underflow condition has occurred. Underflow detection is available in all transmit modes, including modes with null-packet stuffing switched on.                          |
| DTAPI_TX_MUX_OVF      | Overflow in hierarchical multiplexing for ISDB-T  |
| DTAPI_TX_READBACK_ERR | An output pin is forced to an erroneous signal level, e.g. because of a short-circuit (DTA-102 only)  |
| DTAPI_TX_SYNC_ERR     | Transmit-FIFO synchronisation error. The size of one or more packets mode does not match the transmit mode. This status flag is not used in transmit mode <code>dtapi_txmode_raw</code> . |
| DTAPI_TX_TARGET_ERR   | The target adapter signals a fault (DTA-102 only)   |
| DTAPI_RX_LINK_ERR     | Communication link with the device is broken (DTE-31xx only)  |
| DTAPI_RX_DATA_ERR     | Data is lost during transfer to the device (DTE-31xx only)  |

### Latched

Output argument that *latches* the value of the status flags: If a status flag has become '1', even for a very short moment, the corresponding bit in *Latched* is set to '1'. The bit remains set until it is cleared explicitly by **ClearFlag**, or cleared implicitly by one of the following DTAPI-calls: **ClearFifo**, **AttachToPort** or **Reset**.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Status flags have been retrieved successfully         |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

## **DtOutpChannel::GetIoConfig**

Get the I/O configuration of the physical port attached to the output channel. This is the same function as DtDevice::GetIoConfig applied to the physical port corresponding to this channel.

### **Function Arguments**

```
Group, Value, SubValue, ParXtra0, ParXtra1 I/O configuration parameters, see DtDevice::GetIoConfig.
```

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | I/O configuration has been retrieved successfully     |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |
| Other result codes   | See DtDevice::GetIoConfig                             |

# **DtOutpChannel::GetIpPars**

Get IP-related parameters for this channel, as programmed with SetIpPars.

### **Function Arguments**

pIpPars

Receives the TS-over-IP parameters. The user must have allocated the DtIpPars structure.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The TS-over-IP parameters have been retrieved successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED | Channel is not a TS-over-IP channel                        |

## **DtOutpChannel::GetModControl**

For modulators: get current modulation-control parameters.

### **Function Arguments**

ModType

Output argument that receives the modulation type. See **SetModControl** for a list of applicable values.

```
ParXtra0, ParXtra1, ParXtra2
```

Extra modulation parameters. See **SetModControl** for a list of applicable values.

pXtraPars

Extra parameters that are stored in a struct (they do not fit in *ParXtra0* ... *ParXtra2*). Extra parameters are used for the following modulation types CMMB, ISDB-S, ISDB-T, DVB-C2 and DVB-T2.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The modulation parameters have been retrieved successfully |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                      |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function      |
| DTAPI_E_NOT_SUPPORTED | The output channel is not a modulator                      |

# **DtOutpChannel::GetOutputLevel**

Get current level (in dBm) for outputs with an adjustable output level.

### **Function Arguments**

LeveldBm

Output level expressed in units of 0.1 dBm (e.g.  $-30 \rightarrow -30 \times 0.1 = -3$ dBm).

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The output level has been retrieved successfully       |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | The channel does not support a adjustable output level |

## **DtOutpChannel::GetRfControl**

Get upconverter parameters for devices with on-board RF upconverter.

### **Function Arguments**

#### RfRate

Output arguments that is set to the current carrier frequency as programmed into the RF upconverter, expressed in Hertz.

The RF frequency returned in RfRate may be different from the frequency programmed with **SetRfControl** because of rounding to the RF step size.

#### LockStatus

Output argument that is an OR of the following flags. In the normal operational state all RF PLLs are in lock. The DTA-111, DTA-112 and DTA-115 have three PLLs, the other cards have a single PLL. If <code>LockStatus</code> is zero, none of the PLLs is in lock.

| Value             | Meaning  |
|-------------------|--|
| DTAPI_RFPLL_LOCK1 | The first RF PLL is in lock.                   |
| DTAPI_RFPLL_LOCK2 | The second RF PLL is in lock (DTA-111/112/115) |
| DTAPI_RFPLL_LOCK3 | The third RF PLL is in lock (DTA-111/112/115)  |

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | The upconverter parameters have been retrieved successfully |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                       |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function       |
| DTAPI_E_NOT_SUPPORTED | The device does not have an RF upconverter                  |

# DtOutpChannel::GetSfnMaxTimeDiff

Get the maximum allowed time difference between the timestamps associated with samples and the actual transmission time.

### **Function Arguments**

TimeDiff

Receives the maximum allowed time difference in nanoseconds.

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | Maximum time difference has been retrieved successfully                         |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# DtOutpChannel::GetSfnModDelay

Get the current end to end delay of the modulator.

### **Function Arguments**

 ${\it ModDelay}$ 

Receives the delay of modulator in milliseconds.

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | Modulator delay has been retrieved successfully                                 |
| DTAPI_E_IDLE                  | Modulator delay is not available when in IDLE                                   |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# **DtOutpChannel::GetSfnStatus**

Get the current SFN-status and errors flags.

### **Function Arguments**

Status

Returns the status of the SFN transmission.

| Value | Meaning  |
|-------|--|
|       | Set if the first sample is transmitted at indicated timestamp.<br>This flag is cleared after initialization and when timestamps are not in sync. |

#### Error

Returns the SFN transmission error flags.

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_SFN_TOO_EARLY_ERR | Samples with associated timestamps arrived earlier than allowed.  |
| DTAPI_SFN_TOO_LATE_ERR  | Samples with associated timestamps have arrived later than allowed. This can also be caused by a FIFO underflow.  |
| DTAPI_SFN_ABSTIME_ERR   | Embedded absolute timestamp deviates too much or is invalid (e.g. T2-MI), or the first sample has a timestamp from the past (e.g. when using mode DTAPI_SFN_MODE_AT_1PPS) |
| DTAPI_SFN_DISCTIME_ERR  | A discontinuity in the embedded timestamps detected (e.g. DVB-T MIP or T2-MI)   |
| DTAPI_SFN_NOTIME_ERR    | Embedded timestamps are absent (e.g. DVB-T MIP or T2-MI)  |
| DTAPI_SFN_START_ERR     | The transmission of the first sample could not start in time (e.g. when using mode <code>dtapi_sfn_mode_at_1pps</code> )  |

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | Status has been retrieved successfully  |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# **DtOutpChannel::GetSpiClk**

DTA-2142 only. Get the DVB-SPI clock frequency in case the SPI channel is operating with a fixed clock (I/O configurations SPIFIXEDCLK, SPISER8B, SPISER10B).

### **Function Arguments**

SpiClk

Receives the frequency of the fixed DVB-SPI clock in Hertz.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The TS-over-IP parameters have been applied successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function    |
| DTAPI_E_INVALID_MODE  | The SPI clock is not fixed (SPI mode is SPIDVBMODE)      |
| DTAPI_E_NOT_SUPPORTED | Not a DVB-SPI channel                                    |

## **DtOutpChannel::GetTargetId**

Get the target-adapter identifier (DTA-102 only).

### **Function Arguments**

Present

Output argument that indicates whether a target adapter has been detected.

| Value                | Meaning  |
|----------------------|--|
| DTAPI_NO_CONNECTION  | Nothing is connected to the output connector of the DTA-102        |
| DTAPI_DVB_SPI_SINK   | A standard DVB-SPI sink is connected to the DTA-102                |
| DTAPI_TARGET_PRESENT | A target adapter is present  |
| DTAPI_TARGET_UNKNOWN | The system is busy assessing the situation on the output connector |

*TargetId* 

Output argument that is set to an integer value that uniquely identifies the target adapter. Please refer to the DTA-102 data sheet for a list of available target adapters.

A value is assigned to TargetId only if Present is DTAPI\_TARGET\_PRESENT.

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Target-adapter identifier has been retrieved successfully |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                     |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function     |
| DTAPI_E_NOT_SUPPORTED | The output channel does not support target adapters       |

# **DtOutpChannel::GetTsRateBps**

Get the current transport-stream rate.

### **Function Arguments**

TsRate

Output argument that is set to the current transport-stream rate expressed in bits per second. If an external clock is used, or the bitrate is locked to an input, then result code **DTAPI\_E\_INVALID\_TSRATESEL** is returned.

### Result

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | transport-stream rate has been read successfully  |
| DTAPI_E_DEV_DRIVER            | Unclassified failure in device driver   |
| DTAPI_E_INVALID_<br>TSRATESEL | The current TS-rate selection I/O configuration does not allow retrieval of the transport-stream rate |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function   |

### **Remarks**

For a discussion of transport-stream rate vs. transmit-clock rate, refer to SetTsRateBps.

# **DtOutpChannel::GetTxControl**

Get the current value of transmit control.

### **Function Arguments**

TxControl

Refer to SetTxControl for a description of the different values for transmit control.

### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Transmit-control state has been retrieved successfully |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                  |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function  |

# DtOutpChannel::GetTxMode

Get the current transmit mode and null-packet stuffing mode.

### **Function Arguments**

TxMode, StuffMode

Refer to **SetTxMode** for a description of transmit-control modes.

### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Transmit mode has been retrieved successfully         |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |

# **DtOutpChannel::LedControl**

Take direct control of the channel's status LED, or let the hardware drive the LED.

### **Function Arguments**

LedControl

Value that controls the status of the LED.

| Value              | Meaning  |
|--------------------|--|
| DTAPI_LED_HARDWARE | Hardware drives the LED (default after power up) |
| DTAPI_LED_OFF      | LED is forced to off-state                       |
| DTAPI_LED_GREEN    | LED is forced to green-state                     |
| DTAPI_LED_RED      | LED is forced to red-state                       |
| DTAPI_LED_YELLOW   | LED is forced to yellow-state                    |

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | LED setting has been accepted                         |
| DTAPI_E_INVALID_MODE  | The specified LED-control value is invalid            |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | The device does not have a general-status LED         |

## **DtOutpChannel::Reset**

Reset the output channel.

### **Function Arguments**

ResetMode

Specifies which part of the hardware and software should be reset. The following values are defined (values cannot be OR-ed together):

| Value            | Meaning  |
|------------------|--|
| DTAPI_FIFO_RESET | <ul> <li>Reset the transmit FIFO:</li> <li>Data transfers and packet transmission are halted instantaneously.</li> <li>All data pending in the transmit FIFO is discarded.</li> <li>Transmit-control state is reset to DTAPI_TXCTRL_IDLE.</li> <li>Transmit-FIFO underflow flag is cleared.</li> </ul> |
| DTAPI_FULL_RESET | <ul> <li>Full reset:</li> <li>All actions for DTAPI_FIFO_RESET, plus:</li> <li>transport-stream rate is reset to zero (except for ISDB-T and OFDM modulation on DTA-110T)</li> </ul>   |

### Result

| DTAPI_RESULT         | Meaning   |  |
|----------------------|---|--|
| DTAPI_OK             | Output channel has been reset                         |  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                 |  |
| DTAPI_E_MODE         | The specified value for ResetMode is invalid          |  |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |  |

### **Remarks**

A potential side-effect of calling **Reset** is that the packet currently being transmitted is truncated. For one packet, the number of bytes between two consecutive SYNC bytes is less than the packet size. To avoid such a truncation, **ClearFifo** may be used.

# **DtOutpChannel::SetChannelModelling**

Set channel-modelling parameters. This function may only be called while transmit control is IDLE.

### **Function Arguments**

CmEnable

Enable channel modelling. This parameter provides an easy way to turn off channel modelling entirely.

CmPars

Channel-modelling parameters. See description of struct DtCmPars.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Channel-modelling parameters have been applied successfully  |
| DTAPI_E_CM_NUMPATHS   | The number of paths specified in CmPars exceeds the maximum number of supported paths                            |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | The channel has no license for channel-modelling, or channel modelling is not supported for this type of channel |

## **DtOutpChannel::SetCustomRollOff**

DTA-2107 only. Set the FIR-filter coefficients of the root-raised-cosine (RRC) channel filter to construct a custom roll-off factor. The user has to compute the filter coefficients himself.

### **Function Arguments**

Enable

Enable or disable the channel filter with custom roll-off factor.

Filter

Filter coefficients to be programmed in the hardware.

### Result

| DTAPI_RESULT          | Meaning  |  |
|-----------------------|--|--|
| DTAPI_OK              | Channel-modelling parameters have been applied successfully  |  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function        |  |
| DTAPI_E_NOT_SUPPORTED | The output channel does not support a custom roll-off filter |  |

### **Remarks**

The filter does not necessarily need to be an RRC filter. Any set of filter coefficients can be programmed.

# **DtOutpChannel::SetFailsafeAlive**

Reset the watchdog timer for operation in failsafe mode. Failing to call this method within the timeout set with SetFailsafeConfig() will result in the release of the on-board relay so that the output port is connected directly with the input port.

DTAPI\_RESULT DtOutpChannel::SetFailsafeAlive();

### Result

| DTAPI_RESULT          | Meaning   |  |
|-----------------------|---|--|
| DTAPI_OK              | Watchdog has been triggered successfully                  |  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                     |  |
| DTAPI_E_CONFIG        | The channel is not configured to operate in failsafe mode |  |
| DTAPI_E_NOT_SUPPORTED | The channel is not capable of operating in failsafe mode  |  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function     |  |

## **DtOutpChannel::SetFailsafeConfig**

Configure failsafe mode.

### **Function Arguments**

Enable

Enable/disable the failsafe mode and switch to input or failsafe output.

If *Enable* is false, the output channel is connected directly to the input channel.

If *Enable* is true, the output channel will start operating in failsafe mode. The output becomes a failsafe output and the watchdog timer is started. The user application shall call **SetFailsafeAlive** repeatedly within the watchdog timeout period. If the user application is too late (e.g. because it has crashed), the watchdog times out and the failsafe relay is released so that the output is connected directly to the input.

#### Timeout

Specifies the watchdog timeout period in ms.

The timeout value can only be a multiple of 20ms. If the value is not a multiple of 20ms, it will be rounded downwards to the closest multiple of 20ms. Setting <code>Timeout</code> to zero indicates the parameter should be ignored (i.e. only the <code>Enable</code> parameter has a meaning)

### Result

| DTAPI_RESULT          | Meaning   |  |
|-----------------------|---|--|
| DTAPI_OK              | Output channel has been reset                             |  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                     |  |
| DTAPI_E_CONFIG        | The channel is not configured to operate in failsafe mode |  |
| DTAPI_E_NOT_SUPPORTED | The channel is not capable of operating in failsafe mode  |  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function     |  |

## **DtOutpChannel::SetFifoSize**

Set the size the transmit FIFO to a specified value (SetFifoSize), or to the maximum value supported by the channel (SetFifoSizeMax), or to a typical value (SetFifoSizeTyp).

The FIFO size can only be changed if transmit control is **IDLE**.

### **Function Arguments**

FifoSize

Requested size of the transmit FIFO in number of bytes.

FifoSize must be a multiple of 16 and may not exceed the maximum physical size of the transmit FIFO.

### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | The size of the transmit FIFO has been set successfully  |
| DTAPI_E_IN_USE       | The FIFO size cannot be changed because transmission-control state is DTAPI_TXCTRL_HOLD or DTAPI_TXCTRL_SEND |
| DTAPI_E_INVALID_SIZE | The specified FIFO size is negative, zero, not a multiple of 16 or greater than the maximum size             |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function  |

#### Remarks

The size of the Transmit FIFO determines the amount of packet data that is buffered on the device. It also determines the delay between transferring data to the device (with write) and transmission of that data.

## **DtOutpChannel::SetIoConfig**

Set the I/O configuration of the physical port attached to the output channel. This is the same function as DtDevice::SetIoConfig applied to the physical port corresponding to this channel.

### **Function Arguments**

```
Group, Value, SubValue, ParXtra0, ParXtra1 I/O configuration parameters, see DtDevice::SetIoConfig.
```

| DTAPI_RESULT         | Meaning   |  |
|----------------------|---|--|
| DTAPI_OK             | I/O configuration has been set successfully           |  |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function |  |
| Other result codes   | See DtDevice::SetIoConfig                             |  |

# **DtOutpChannel::SetIpPars**

Set IP-related parameters for the transmission of a TS-over-IP stream. The IP parameters can only be set if transmit control is **IDLE**.

## **Function Arguments**

pIpPars

New parameter set to be applied. Please refer to the DtlpPars page for a description of the parameters.

### Result

| DTAPI_RESULT               | Meaning   |  |
|----------------------------|---|--|
| DTAPI_OK                   | The TS-over-IP parameters have been applied successfully  |  |
| DTAPI_E_DST_MAC_ADDR       | The IP parameters cannot be applied because MAC address of destination cannot be determined. Most likely the destination address currently is invalid. Check if you can reach the destination IP address using the ping command on the console. |  |
| DTAPI_E_IN_USE             | The parameters cannot be changed because the channel is busy. Transmit control shall be switched back to IDLE first   |  |
| DTAPI_E_INVALID_ARG        | The value of one of the TS-over-IP parameters is invalid  |  |
| DTAPI_E_INVALID_FECMODE    | The m_FecMode parameter is invalid.   |  |
| DTAPI_E_INVALID_FEC_MATRIX | The m_FecNumCols / m_FecNumRows are invalid   |  |
| DTAPI_E_INVALID_FLAGS      | The m_Flags parameter is invalid  |  |
| DTAPI_E_INVALID_MODE       | The m_Mode parameter is invalid   |  |
| DTAPI_E_INVALID_PROFILE    | The m_Profile in the m_IpProfile member is invalid.   |  |
| DTAPI_E_INVALID_PROTOCOL   | The m_Protocol parameter is invalid or not valid for the current m_FecMode or m_VideoStandard   |  |
| DTAPI_E_INVALID_VIDEOSTD   | The m_VideoStandard in the m_IpProfile member is invalid.   |  |
| DTAPI_E_IPV6_NOT_SUPPORTED | IpV6 is not supported on this operating system  |  |
| DTAPI_E_NO_ADAPTER_IP_ADDR | The network IP address could not be retrieved. Check the network driver IP protocol settings  |  |
| DTAPI_E_NO_LINK            | The IP parameters cannot be applied because the link is down. Check network cable and speed settings  |  |
| DTAPI_E_NOT_ATTACHED       | Channel object is not attached to a hardware function   |  |
| DTAPI_E_NOT_SUPPORTED      | Channel is not a TS-over-IP channel   |  |
| DTAPI_E_NW_DRIVER          | The IP address could not be retrieved from the network driver. Check network driver / network connection.   |  |
| DTAPI_E_NWAP_DRIVER        | An error occurred using the Advanced Protocol Driver.   |  |
| DTAPI_E_VLAN_NOT_FOUND     | The VLAN with the given ID is not found   |  |

### **Remarks**

SetIpPars should be called before transmit control is set to HOLD or SEND.

After the initial call to SetIpPars, parameters can be changed again, but only when transmit control is IDLE.

## **DtOutpChannel::SetModControl**

Set modulation-control parameters for modulator channels. There are eight overloads, six for specific modulation types (CMMB, DVB-C2, DVB-T2, ISDB-S, ISDB-T and IQ-direct), one for the other modulation types and one for setting the DVB channel identification for satellite signals.

The ISDB-T overload can be used to let DTAPI perform hierarchical multiplexing. For ISDB-T without hierarchical multiplexing the first overload of **setModControl** can be used. In that case the input of the modulator shall already be multiplexed and consist of 204-byte TMCC encoded packets.

If **SetFifoSizeTyp** has been called, **SetModControl** may change the size of the transmit FIFO to an appropriate value for the selected modulation type.

```
// Overload #1 - To be used for all modulation modes except CMMB, DVB-CID,
//
                DVB-C2, DVB-T2, ISDB-S and ISDB-T with hierarchical
                multiplexing
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] int ParXtra2
                               // Extra parameter #2
);
// Overload #2 - To be used for CMMB
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtCmmbPars& CmmbPars // CMMB modulation parameters
);
// Overload #3 - To be used for DVB-C2
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtDvbC2Pars& DvbC2Pars // DVB-C2 modulation parameters
// Overload #4 - To be used for DVB-CID
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtDvbCidPars& DvbCidPars // DVB channel identification parameters
);
// Overload #5 - To be used for DVB-T2
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtDvbT2Pars& DvbT2Pars // DVB-T2 modulation parameters
);
// Overload #6 - To be used for ISDB-S with hierarchical multiplexing
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtIsdbsPars& IsdbsPars // ISDB-S modulation parameters
// Overload #7 - To be used for ISDB-S3 with hierarchical multiplexing
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtIsdbS3Pars& IsdbS3Pars // ISDB-S3 modulation parameters
);
// Overload #8 - To be used for ISDB-T with hierarchical multiplexing
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtIsdbtPars& IsdbtPars // ISDB-T modulation parameters
// Overload #9 - To be used for IO-direct
DTAPI RESULT DtOutpChannel::SetModControl(
 [in] DtIqDirectPars& IqDirectPars // IQ-direct modulation parameters
);
```

### **Function Arguments**

ModType, ParXtra0, ParXtra1, ParXtra2

Modulation parameters. See the tables on the following pages for a detailed specification of each parameter, per DekTec board type and firmware version.

CmmbPars

CMMB modulation parameters; see description of class DtCmmbPars.

DvbC2Pars

DVB-C2 modulation parameters; see description of class DtDvbC2Pars in document: DTAPI Reference – DVB-C2+T2 Multi-PLP Extensions.

DvbCidPars

DVB channel identification for satellite (DVB-S2) signals parameters; see description of class DtDvbCidPars.

DvbT2Pars

DVB-T2 modulation parameters; see description of class DtDvbT2Pars in document: DTAPI Reference – DVB-C2+T2 Multi-PLP Extensions.

IsdbsPars

ISDB-S modulation parameters for hierarchical multiplexing; see description of class DtIsdbsPars.

**Note**: For ISDB-S, the current version of DTAPI supports multiplexing of a single TS only.

*IsdbS3Pars* 

ISDB-S3 modulation parameters for hierarchical multiplexing; see description of class DtIsdbS3Pars.

**Note**: For ISDB-S3, the current version of DTAPI supports 5810-byte TLV-data packets only.

*IsdbtPars* 

ISDB-T modulation parameters for hierarchical multiplexing; see description of class DtIsdbtPars.

IgDirectPars

IQ-direct modulation parameters; see description of class DtIqDirectPars.

## **Detailed Parameter Descriptions**

| Page | Modulation Type                  |
|------|----------------------------------|
| 391  | Overview                         |
| 394  | ADTB-T                           |
| 396  | ATSC                             |
| 153  | СММВ                             |
| 397  | DAB                              |
| 398  | DTMB                             |
| 400  | DVB-S                            |
| 401  | DVB-S.2                          |
| 403  | DVB-S.2 L.3 base-<br>band frames |

| Page     | Modulation Type                 |
|----------|---------------------------------|
| 404      | DVB-S.2X                        |
| 407      | DVB-S.2X L.3<br>baseband frames |
| 408      | DVB-T / DVB-H                   |
| 410      | IQ-DIRECT                       |
| 162, 412 | ISDB-S                          |
| 167, 413 | ISDB-T                          |
| 415      | QAM                             |
| 416      | DVB-T2 T2-MI                    |
|          |                                 |

The DVB-C2 and DVB-T2 parameters are described in a separate document: DTAPI Reference – DVB-C2+T2 Multi-PLP Extensions.

## **Modulation Types**

ModType
Modulation type:

### L-Band

| ModType                           | Meaning                                | Required Capability |
|-----------------------------------|--|---------------------|
| DTAPI_MOD_DVBS_QPSK               | DVB-S, QPSK                            | DTAPI_CAP_TX_DVBS   |
| DTAPI_MOD_DVBS2_16APSK            | DVB-S.2, 16-APSK                       | DTAPI_CAP_TX_S2APSK |
| DTAPI_MOD_DVBS2_32APSK            | DVB-S.2, 32-APSK                       |                     |
| DTAPI_MOD_DVBS2_8PSK              | DVB-S.2, 8-PSK                         | DTAPI_CAP_TX_DVBS2  |
| DTAPI_MOD_DVBS2_L3                | DVB-S.2 L.3 baseband frame modulation  |                     |
| DTAPI_MOD_DVBS2_QPSK              | DVB-S.2, QPSK                          |                     |
| DTAPI_MOD_DVBS2X_128APS<br>K      | DVB-S.2X, 128-APSK                     | DTAPI_CAP_TX_DVBS2X |
| DTAPI_MOD_DVBS2X_16APSK<br>_L     | DVB-S.2X, 16-APSK-L                    |                     |
| DTAPI_MOD_DVBS2X_256APS<br>K      | DVB-S.2X, 256-APSK                     |                     |
| DTAPI_MOD_DVBS2X_256APS<br>K_L    | DVB-S.2X, 256-APSK-L                   |                     |
| DTAPI_MOD_DVBS2X_32APSK<br>_L     | DVB-S.2X, 32-APSK                      |                     |
| DTAPI_MOD_DVBS2X_32APSK<br>_L     | DVB-S.2X, 32-APSK-L                    |                     |
| DTAPI_MOD_DVBS2X_64APSK           | DVB-S.2X, 64-APSK                      |                     |
| DTAPI_MOD_DVBS2X_8APSK_<br>L      | DVB-S.2X, 8-APSK-L                     |                     |
| DTAPI_MOD_DVBS2X_BPSK_S<br>_VLSNR | DVB-S.2X, BPSK-S very<br>low SNR       |                     |
| DTAPI_MOD_DVBS2X_BPSK_S<br>_VLSNR | DVB-S.2X, BPSK-S very<br>low SNR       |                     |
| DTAPI_MOD_DVBS2X_BPSK_V<br>LSNR   | DVB-S.2X, BPSK very low<br>SNR         |                     |
| DTAPI_MOD_DVBS2X_QPSK_V<br>LSNR   | DVB-S.2X, QPSK very<br>low SNR         |                     |
| DTAPI_MOD_DVBS2X_32APSK<br>_L     | DVB-S.2X, 32-APSK-L                    |                     |
| DTAPI_MOD_DVBS2X_L3               | DVB-S.2X L.3 baseband frame modulation |                     |
| DTAPI_MOD_ISDBS                   | ISDB-S                                 | DTAPI_CAP_TX_ISDBS  |

## VHF\* / UHF

| ModType            | Meaning                           | Required Capability                         |
|--------------------|-----------------------------------|---|
| DTAPI_MOD_ADTBT    | ADTB-T                            | DTAPI_CAP_TX_DTMB                           |
| DTAPI_MOD_ATSC     | ATSC VSB                          | DTAPI_CAP_TX_ATSC                           |
| DTAPI_MOD_DAB      | DAB+/DMB                          | DTAPI_CAP_TX_DAB                            |
| DTAPI_MOD_DMBTH    | DMB-T/H                           | DTAPI_CAP_TX_DTMB                           |
| DTAPI_MOD_DVBT     | DVB-T / DVB-H                     | DTAPI_CAP_TX_DVBT                           |
| DTAPI_MOD_IQDIRECT | Direct I/Q sample<br>transmission | DTAPI_CAP_TX_IQ                             |
| DTAPI_MOD_QAM16    | 16-QAM                            | DTAPI_CAP_TX_QAM_A or                       |
| DTAPI_MOD_QAM32    | 32-QAM                            | DTAPI_CAP_TX_QAM_B or<br>DTAPI_CAP_TX_QAM_C |
| DTAPI_MOD_QAM64    | 64-QAM                            |   |
| DTAPI_MOD_QAM128   | 128-QAM                           |   |
| DTAPI_MOD_QAM256   | 256-QAM                           |   |
| DTAPI_MOD_T2MI     | T2-MI modulation                  | DTAPI_CAP_TX_DVBT2                          |

### **Modulation Mode: ADTB-T**

ParXtra0

Extra modulation parameter #1 is the OR of values for the following fields: Bandwidth, Constellation, FEC Code Rate, Frame Header Mode, Interleaver Mode, Pilots and Use Frame Numbering.

### Bandwidth

| Value                 | Meaning  |
|-----------------------|----------|
| DTAPI_MOD_DTMB_5MHZ   | 5 MHz    |
| DTAPI_MOD_DTMB_6MHZ   | 6 MHz    |
| DTAPI_MOD_DTMB_7MHZ   | 7 MHz    |
| DTAPI_MOD_DTMB_8MHZ   | 8 MHz    |
| DTAPI_MOD_DTMB_BW_MSK | AND mask |

### Constellation

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_MOD_DTMB_QAM4NR | 4-QAM-NR; can only be used with FEC code rate 0.8 |
| DTAPI_MOD_DTMB_QAM4   | 4-QAM   |
| DTAPI_MOD_DTMB_QAM16  | 16-QAM  |
| DTAPI_MOD_DTMB_QAM32  | 32-QAM; can only be used with FEC code rate 0.8   |
| DTAPI_MOD_DTMB_QAM64  | 64-QAM  |
| DTAPI_MOD_DTMB_CO_MSK | AND mask  |

### **FEC Code Rate**

| Value                   | Meaning                            |
|-------------------------|------------------------------------|
| DTAPI_MOD_DTMB_0_4      | FEC code rate 0.4: FEC(7488, 3008) |
| DTAPI_MOD_DTMB_0_6      | FEC code rate 0.6: FEC(7488, 4512) |
| DTAPI_MOD_DTMB_0_8      | FEC code rate 0.8: FEC(7488, 6016) |
| DTAPI_MOD_DTMB_RATE_MSK | AND mask                           |

### Frame Header Mode

| Value                 | Meaning  |
|-----------------------|--|
| DTAPI_MOD_DTMB_PN420  | PN420: Frame header 1 (420 symbols 55.6µs)       |
| DTAPI_MOD_DTMB_PN595  | PN595: Frame header 2 (595 symbols 78.7 $\mu$ s) |
| DTAPI_MOD_DTMB_PN945  | PN945: Frame header 3 (945 symbols 125µs)        |
| DTAPI_MOD_DTMB_PN_MSK | AND mask   |

### Interleaver Mode

| Value                 | Meaning                         |
|-----------------------|---------------------------------|
| DTAPI_MOD_DTMB_IL_1   | Interleaver mode 1: B=54, M=240 |
| DTAPI_MOD_DTMB_IL_2   | Interleaver mode 2: B=54, M=720 |
| DTAPI_MOD_DTMB_IL_MSK | AND mask                        |

### **Pilots**

| Value                    | Meaning   |
|--------------------------|---|
| DTAPI_MOD_DTMB_NO_PILOTS | No pilots   |
| DTAPI_MOD_DTMB_PILOTS    | Add pilots; Can be used in single-carrier mode only |
| DTAPI_MOD_DTMB_PIL_MSK   | AND mask  |

### Use Frame Numbering

| Value                     | Meaning             |
|---------------------------|---------------------|
| DTAPI_MOD_DTMB_NO_FRM_NO  | No frame numbering  |
| DTAPI_MOD_DTMB_USE_FRM_NO | Use frame numbering |
| DTAPI_MOD_DTMB_UFRM_MSK   | AND mask            |

### **Modulation Mode: ATSC**

### ${\it ModType}$

| ModType        | Meaning | Required Capability |
|----------------|---------|---------------------|
| DTAPI_MOD_ATSC | ATSC    | DTAPI_CAP_TX_ATSC   |

#### ParXtra0

Extra modulation parameter #0 specifies the VSB constellation.

| ParXtra0               | Meaning                               | Symbol Rate (bd) | TS Rate (bps) |
|------------------------|---------------------------------------|------------------|---------------|
| DTAPI_MOD_ATSC_VSB8    | 8-VSB                                 | 10,762,238       | 19,392,658    |
| DTAPI_MOD_ATSC_VSB16   | 16-VSB                                | 10,762,238       | 38,785,317    |
| DTAPI_MOD_ATSC_VSB_MSK | AND-mask for ATSC constellation field |                  |               |

### ParXtra1

This parameter specifies the number of taps of each phase of the root-raised cosine filter that is used to shape the spectrum of the output signal. The number of taps can have any value between 2 and 256 (the implementation is optimized for powers of 2). Specifying more taps improves the spectrum, but increases processor overhead.

The recommend number of taps is 64 taps; If insufficient CPU power is available, 32 taps produces acceptable results, too.

### ParXtra2

Not used in ATSC modulation.

# **Modulation Mode: DAB**

The DAB modulator doesn't work with transport streams but instead expects ETI(NI, G.703) streams with a constant bitrate of 2.048Mbps.

ParXtra0, ParXtra1, ParXtra2
Not used in DAB modulation.

# **Modulation Mode: DTMB**

ParXtra0

Extra modulation parameter #1 is the OR of values for the following fields: Bandwidth, Constellation, FEC Code Rate, Frame Header Mode, Interleaver Mode and Use Frame Numbering.

# **Bandwidth**

| Value                 | Meaning  |
|-----------------------|----------|
| DTAPI_MOD_DTMB_5MHZ   | 5 MHz    |
| DTAPI_MOD_DTMB_6MHZ   | 6 MHz    |
| DTAPI_MOD_DTMB_7MHZ   | 7 MHz    |
| DTAPI_MOD_DTMB_8MHZ   | 8 MHz    |
| DTAPI_MOD_DTMB_BW_MSK | AND mask |

# Constellation

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_MOD_DTMB_QAM4NR | 4-QAM-NR; can only be used with FEC code rate 0.8 |
| DTAPI_MOD_DTMB_QAM4   | 4-QAM   |
| DTAPI_MOD_DTMB_QAM16  | 16-QAM  |
| DTAPI_MOD_DTMB_QAM32  | 32-QAM; can only be used with FEC code rate 0.8   |
| DTAPI_MOD_DTMB_QAM64  | 64-QAM  |
| DTAPI_MOD_DTMB_CO_MSK | AND mask  |

# **FEC Code Rate**

| Value                   | Meaning                            |
|-------------------------|------------------------------------|
| DTAPI_MOD_DTMB_0_4      | FEC code rate 0.4: FEC(7488, 3008) |
| DTAPI_MOD_DTMB_0_6      | FEC code rate 0.6: FEC(7488, 4512) |
| DTAPI_MOD_DTMB_0_8      | FEC code rate 0.8: FEC(7488, 6016) |
| DTAPI_MOD_DTMB_RATE_MSK | AND mask                           |

### Frame Header Mode

| Value                 | Meaning  |
|-----------------------|--|
| DTAPI_MOD_DTMB_PN420  | PN420: Frame header 1 (420 symbols 55.6µs)         |
| DTAPI_MOD_DTMB_PN945  | PN945: Frame header 3 (945 symbols 12 <i>5µ</i> s) |
| DTAPI_MOD_DTMB_PN_MSK | AND mask   |

# Interleaver Mode

| Value                 | Meaning                         |
|-----------------------|---------------------------------|
| DTAPI_MOD_DTMB_IL_1   | Interleaver mode 1: B=54, M=240 |
| DTAPI_MOD_DTMB_IL_2   | Interleaver mode 2: B=54, M=720 |
| DTAPI_MOD_DTMB_IL_MSK | AND mask                        |

# Use Frame Numbering

| Value                     | Meaning             |
|---------------------------|---------------------|
| DTAPI_MOD_DTMB_NO_FRM_NO  | No frame numbering  |
| DTAPI_MOD_DTMB_USE_FRM_NO | Use frame numbering |
| DTAPI_MOD_DTMB_UFRM_MSK   | AND mask            |

# **Modulation Mode: DVB-S**

ParXtra0

Extra modulation parameter #0

| ParXtra0      | Meaning       |
|---------------|---------------|
| DTAPI_MOD_1_2 | Code rate 1/2 |
| DTAPI_MOD_2_3 | Code rate 2/3 |
| DTAPI_MOD_3_4 | Code rate 3/4 |
| DTAPI_MOD_4_5 | Code rate 4/5 |
| DTAPI_MOD_5_6 | Code rate 5/6 |
| DTAPI_MOD_6_7 | Code rate 6/7 |
| DTAPI_MOD_7_8 | Code rate 7/8 |

# **Modulation Mode: DVB-S.2**

ParXtra0

Extra modulation parameter #0 encodes the code rate.

| ParXtra0       | Meaning        |
|----------------|----------------|
| DTAPI_MOD_1_2  | Code rate 1/2  |
| DTAPI_MOD_1_3  | Code rate 1/3  |
| DTAPI_MOD_1_4  | Code rate 1/4  |
| DTAPI_MOD_2_3  | Code rate 2/3  |
| DTAPI_MOD_2_5  | Code rate 2/5  |
| DTAPI_MOD_3_4  | Code rate 3/4  |
| DTAPI_MOD_3_5  | Code rate 3/5  |
| DTAPI_MOD_4_5  | Code rate 4/5  |
| DTAPI_MOD_5_6  | Code rate 5/6  |
| DTAPI_MOD_6_7  | Code rate 6/7  |
| DTAPI_MOD_7_8  | Code rate 7/8  |
| DTAPI_MOD_8_9  | Code rate 8/9  |
| DTAPI_MOD_9_10 | Code rate 9/10 |

### ParXtra1

Extra modulation parameter #1 encodes pilots yes/no, FEC frame size, roll-off and constellation shape.

### **Pilots**

| Value                   | Meaning                 |
|-------------------------|-------------------------|
| DTAPI_MOD_S2_NOPILOTS   | Pilots disabled         |
| DTAPI_MOD_S2_PILOTS     | Pilots enabled          |
| DTAPI_MOD_S2_PILOTS_MSK | AND-mask for this field |

# Long or Short FECFRAME

| Value                 | Meaning                      |
|-----------------------|------------------------------|
| DTAPI_MOD_S2_SHORTFRM | Short FECFRAME (16.200 bits) |
| DTAPI_MOD_S2_LONGFRM  | Long FECFRAME (64.800 bits)  |
| DTAPI_MOD_S2_FRM_MSK  | AND-mask for this field      |

# Roll-off

| Value                  | Meaning                 |
|------------------------|-------------------------|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off        |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off             |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off            |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off            |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off            |
| DTAPI_MOD_ROLLOFF_MSK  | AND-mask for this field |

# Constellation amplitude

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_MOD_S2_CONST_AUTO | Default constellation amplitude   |
| DTAPI_MOD_S2_CONST_E_1  | E=1; Average symbol energy is constant (only allowed for DVB-S2 16- and 32-APSK; default) |
| DTAPI_MOD_S2_CONST_R_1  | R=1; Radius of outer ring is constant<br>(only allowed for DVB-S2 16- and 32-APSK)        |
| DTAPI_MOD_S2_CONST_MSK  | AND-mask for this field   |

# ParXtra2

Physical layer scrambling initialization sequence "n", aka "Gold code".

# Modulation Mode: DVB-S.2 L.3 Baseband Frame

When DVB-S.2 L.3 baseband frame modulation is used **DTAPI** expects DVB-S2 baseband frames with an addition L.3 Header. See DTAPI Manual – Overview and Data Formats.pdf for more details. **DTAPI** decodes this information and performs the DVB-S2 modulation.

ParXtra0

Extra modulation parameter #0 specifies the symbol rate (in bd).

#### ParXtra1

Extra modulation parameter #1 encodes the roll-off.

### Roll-off

| Value                  | Meaning                 |
|------------------------|-------------------------|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off        |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off             |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off            |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off            |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off            |
| DTAPI_MOD_ROLLOFF_MSK  | AND-mask for this field |

ParXtra2

Not used.

# Modulation Mode: DVB-S.2X

ParXtra0

Extra modulation parameter #0 encodes the code rate.

| ParXtra0        | Meaning                      |
|-----------------|------------------------------|
| DTAPI_MOD_1_2   | Code rate 1/2                |
| DTAPI_MOD_1_3   | Code rate 1/3                |
| DTAPI_MOD_1_4   | Code rate 1/4                |
| DTAPI_MOD_2_3   | Code rate 2/3                |
| DTAPI_MOD_2_5   | Code rate 2/5                |
| DTAPI_MOD_3_4   | Code rate 3/4                |
| DTAPI_MOD_3_5   | Code rate 3/5                |
| DTAPI_MOD_4_5   | Code rate 4/5                |
| DTAPI_MOD_5_6   | Code rate 5/6                |
| DTAPI_MOD_6_7   | Code rate 6/7                |
| DTAPI_MOD_7_8   | Code rate 7/8                |
| DTAPI_MOD_8_9   | Code rate 8/9                |
| DTAPI_MOD_9_10  | Code rate 9/10               |
| DTAPI_MOD_9_10  | Code rate 9/10               |
|                 | DVB-S.2X specific code rates |
| DTAPI_MOD_1_5   | Code rate 1/5                |
| DTAPI_MOD_2_9   | Code rate 2/9                |
| DTAPI_MOD_11_45 | Code rate 11/45              |
| DTAPI_MOD_4_15  | Code rate 4/15               |
| DTAPI_MOD_13_45 | Code rate 13/45              |
| DTAPI_MOD_14_45 | Code rate 14/45              |
| DTAPI_MOD_9_20  | Code rate 9/20               |
| DTAPI_MOD_7_15  | Code rate 7/15               |
| DTAPI_MOD_8_15  | Code rate 8/15               |
| DTAPI_MOD_11_20 | Code rate 11/20              |
| DTAPI_MOD_5_9   | Code rate 5/9                |
| DTAPI_MOD_26_45 | Code rate 26/45              |
| DTAPI_MOD_28_45 | Code rate 28/45              |
| DTAPI_MOD_23_36 | Code rate 23/36              |
| DTAPI_MOD_29_45 | Code rate 29/45              |

| DTAPI_MOD_31_45 | Code rate 31/45 |
|-----------------|-----------------|
| DTAPI_MOD_25_36 | Code rate 25/36 |
| DTAPI_MOD_32_45 | Code rate 32/45 |
| DTAPI_MOD_13_18 | Code rate 13/18 |
| DTAPI_MOD_11_15 | Code rate 11/15 |
| DTAPI_MOD_7_9   | Code rate 7/9   |
| DTAPI_MOD_77_90 | Code rate 77/99 |

### ParXtra1

Extra modulation parameter #1 encodes pilots yes/no, FEC frame size, roll-off and constellation shape.

# **Pilots**

| Value                   | Meaning                 |
|-------------------------|-------------------------|
| DTAPI_MOD_S2_NOPILOTS   | Pilots disabled         |
| DTAPI_MOD_S2_PILOTS     | Pilots enabled          |
| DTAPI_MOD_S2_PILOTS_MSK | AND-mask for this field |

# Long, Medium or Short FECFRAME

| Value                  | Meaning                       |
|------------------------|-------------------------------|
| DTAPI_MOD_S2_SHORTFRM  | Short FECFRAME (16.200 bits)  |
| DTAPI_MOD_S2_MEDIUMFRM | Medium FECFRAME (32.400 bits) |
| DTAPI_MOD_S2_LONGFRM   | Long FECFRAME (64.800 bits)   |
| DTAPI_MOD_S2_FRM_MSK   | AND-mask for this field       |

# Roll-off

| Value                  | Meaning                 |
|------------------------|-------------------------|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off        |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off             |
| DTAPI_MOD_ROLLOFF_5    | 5% roll-off             |
| DTAPI_MOD_ROLLOFF_10   | 10% roll-off            |
| DTAPI_MOD_ROLLOFF_15   | 15% roll-off            |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off            |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off            |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off            |
| DTAPI_MOD_ROLLOFF_MSK  | AND-mask for this field |

# Constellation shape

| Value                   | Meaning                                |
|-------------------------|--|
| DTAPI_MOD_S2_CONST_AUTO | Default constellation shape            |
| DTAPI_MOD_S2_CONST_E_1  | E=1; Average symbol energy is constant |
| DTAPI_MOD_S2_CONST_MSK  | AND-mask for this field                |

ParXtra2

Physical layer scrambling initialization sequence "n", aka "Gold code".

# Modulation Mode: DVB-S.2X L.3 Baseband Frame

When DVB-S.2X L.3 baseband frame modulation is used **DTAPI** expects DVB-S2X baseband frames with an addition L.3 Header. See DTAPI Manual – Overview and Data Formats.pdf for more details. **DTAPI** decodes this information and performs the DVB-S2X modulation.

ParXtra0

Extra modulation parameter #0 specifies the symbol rate (in bd).

ParXtra1

Extra modulation parameter #1 encodes the roll-off.

### Roll-off

| Value                  | Meaning                 |
|------------------------|-------------------------|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off        |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off             |
| DTAPI_MOD_ROLLOFF_5    | 5% roll-off             |
| DTAPI_MOD_ROLLOFF_10   | 10% roll-off            |
| DTAPI_MOD_ROLLOFF_15   | 15% roll-off            |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off            |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off            |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off            |
| DTAPI_MOD_ROLLOFF_MSK  | AND-mask for this field |

ParXtra2

Not used.

# Modulation Mode: DVB-T/DVB-H

#### ParXtra0

Extra modulation parameter #0 is the code rate.

| DTAPI_MOD_1_2 | Code rate 1/2 |
|---------------|---------------|
| DTAPI_MOD_2_3 | Code rate 2/3 |
| DTAPI_MOD_3_4 | Code rate 3/4 |
| DTAPI_MOD_5_6 | Code rate 5/6 |
| DTAPI_MOD_7_8 | Code rate 7/8 |

### ParXtra1

Extra modulation parameter #1 is the OR of values for the following fields: Bandwidth, Constellation, Guard Interval, Interleaving, Transmission Mode and DVB-H-Signalling.

### Bandwidth

| Value                 | Meaning  |
|-----------------------|----------|
| DTAPI_MOD_DVBT_5MHZ   | 5 MHz    |
| DTAPI_MOD_DVBT_6MHZ   | 6 MHz    |
| DTAPI_MOD_DVBT_7MHZ   | 7 MHz    |
| DTAPI_MOD_DVBT_8MHZ   | 8 MHz    |
| DTAPI_MOD_DVBT_BW_MSK | AND mask |

# Constellation

| Value                 | Meaning  |
|-----------------------|----------|
| DTAPI_MOD_DVBT_QPSK   | QPSK     |
| DTAPI_MOD_DVBT_QAM16  | 16-QAM   |
| DTAPI_MOD_DVBT_QAM64  | 64-QAM   |
| DTAPI_MOD_DVBT_CO_MSK | AND mask |

# **Guard Interval**

| Value                 | Meaning  |
|-----------------------|----------|
| DTAPI_MOD_DVBT_G_1_32 | 1/32     |
| DTAPI_MOD_DVBT_G_1_16 | 1/16     |
| DTAPI_MOD_DVBT_G_1_8  | 1/8      |
| DTAPI_MOD_DVBT_G_1_4  | 1/4      |
| DTAPI_MOD_DVBT_GU_MSK | AND mask |

# Interleaving

| Value                  | Meaning                       |
|------------------------|-------------------------------|
| DTAPI_MOD_DVBT_INDEPTH | In-depth interleaver (2k, 4k) |
| DTAPI_MOD_DVBT_NATIVE  | Native interleaver            |
| DTAPI_MOD_DVBT_IL_MSK  | AND mask                      |

# **Transmission Mode**

| Value                 | Meaning         |
|-----------------------|-----------------|
| DTAPI_MOD_DVBT_2K     | 2k mode         |
| DTAPI_MOD_DVBT_4K     | 4k mode (DVB-H) |
| DTAPI_MOD_DVBT_8K     | 8k mode         |
| DTAPI_MOD_DVBT_MD_MSK | AND mask        |

# **Disable DVB-H Signalling Service Indication**

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_MOD_DVBT_ENA4849  | Enable DVB-H signalling indication bits s48 and s49. Note: If<br>ParXtra2 is set to -1, s48 and s49 are disabled, too |
| DTAPI_MOD_DVBT_DIS4849  | Disable DVB-H signalling bits by setting TPS length field to 31, or 23 when ParXtra2 is set to -1                     |
| DTAPI_MOD_DVBT_4849_MSK | AND mask  |

# DVB-H Signalling – Service Indication s48

| Value                  | Meaning  |
|------------------------|--|
| DTAPI_MOD_DVBT_S48_OFF | Time slicing is not used                         |
| DTAPI_MOD_DVBT_S48     | At least one elementary stream uses Time Slicing |
| DTAPI_MOD_DVBT_S48_MSK | AND mask   |

# DVB-H Signalling – Service Indication s49

| Value                  | Meaning                                     |
|------------------------|---|
| DTAPI_MOD_DVBT_S49_OFF | MPE-FEC is not used                         |
| DTAPI_MOD_DVBT_S49     | At least one elementary stream uses MPE-FEC |
| DTAPI_MOD_DVBT_S49_MSK | AND mask                                    |

### ParXtra2

16-bit cell identifier (cell\_id). If ParXtra2 is set to -1, the cell identifier is disabled by setting the TPS length field to 23 (this disables the DVB-H Service Indication bits s48 and s49, too).

# **Modulation Mode: IQ-DIRECT**

### Sdfasdf

#### ParXtra0

Extra modulation parameter #0 specifies which interpolation method is used.

# Interpolation Method

| Value                   | Meaning                  |
|-------------------------|--------------------------|
| DTAPI_MOD_INTERPOL_OFDM | Use OFDM interpolation   |
| DTAPI_MOD_INTERPOL_QAM  | Use QAM interpolation    |
| DTAPI_MOD_INTERPOL_RAW  | Raw mode (e.g. DTA-2115) |

### ParXtra1

Extra modulation parameter #1 specifies the sample rate used by hardware to clock out I and Q samples.

### ParXtra2

Extra modulation parameter #2 is the OR of values for the following fields: Roll-off and IQ-sample packing.

### Roll-off

| Value                  | Meaning                 |
|------------------------|-------------------------|
| DTAPI_MOD_ROLLOFF_AUTO | Default roll-off        |
| DTAPI_MOD_ROLLOFF_NONE | No roll-off             |
| DTAPI_MOD_ROLLOFF_5    | 5% roll-off             |
| DTAPI_MOD_ROLLOFF_10   | 10% roll-off            |
| DTAPI_MOD_ROLLOFF_15   | 15% roll-off            |
| DTAPI_MOD_ROLLOFF_20   | 20% roll-off            |
| DTAPI_MOD_ROLLOFF_25   | 25% roll-off            |
| DTAPI_MOD_ROLLOFF_35   | 35% roll-off            |
| DTAPI_MOD_ROLLOFF_MSK  | AND-mask for this field |

# IQ-sample packing

Specifies the size of the IQ-sample fields which are transferred over the PCI-Express bus.

| Value                | Meaning                       |
|----------------------|-------------------------------|
| DTAPI_MOD_IQPCK_AUTO | Best IQ-sample-packing        |
| DTAPI_MOD_IQPCK_NONE | No IQ-sample-packing          |
| DTAPI_MOD_IQPCK_10B  | IQ-samples packed into 10 bit |
| DTAPI_MOD_IQPCK_12B  | IQ-samples packed into 12 bit |
| DTAPI_MOD_IQPCK_MSK  | AND-mask for this field       |

# **Remarks**

IQ-direct modulation parameters can also be set through class DtIqDirectPars.

If the modulation mode IQ-DIRECT is selected, the data written to the Transmit FIFO shall be an array of I/Q sample pairs. The samples are signed 16-bit integer in I, Q order (not dependent on IQ-sample packing).

# **Modulation Mode: ISDB-S**

If ISDB-S modulation is selected using **SetModControl**(**DTAPI\_MOD\_ISDBS**, -1, -1, -1), no further parameters are required and **DTAPI** expects an 188-byte transport stream with TMCC information encoded in the SYNC bytes. **DTAPI** will decode the TMCC information for obtaining the required modulation type and code rates.

### **Modulation Mode: ISDB-T**

ParXtra0

Extra modulation parameter #0 is the OR of values for the following fields: Initial Total Number of Segments, Bandwidth, Sample Rate and Sub Channel.

### **Initial Total Number of Segments**

| Value               | Meaning     |
|---------------------|-------------|
| DTAPI_ISDBT_SEGM_1  | 1 segment   |
| DTAPI_ISDBT_SEGM_3  | 3 segments  |
| DTAPI_ISDBT_SEGM_13 | 13 segments |

The DTAPI needs the number of segments to initialise the modulator and to compute bit rates. When in operation, the ISDB-T modulator dynamically follows the number of segments encoded in the TMCC information.

### Bandwidth

| Value               | Meaning  |
|---------------------|----------|
| DTAPI_ISDBT_BW_5MHZ | 5 MHz    |
| DTAPI_ISDBT_BW_6MHZ | 6 MHz    |
| DTAPI_ISDBT_BW_7MHZ | 7 MHz    |
| DTAPI_ISDBT_BW_8MHZ | 8 MHz    |
| DTAPI_ISDBT_BW_MSK  | AND mask |

### Sample Rate

| Value                 | Meaning   |
|-----------------------|---|
| DTAPI_ISDBT_SRATE_1_1 | Use nominal sample rate (512/63 MHz for 6MHz)             |
| DTAPI_ISDBT_SRATE_1_2 | Use nominal sample rate divided by 2 (at most 6 segments) |
| DTAPI_ISDBT_SRATE_1_4 | Use nominal sample rate divided by 4 (at most 3 segments) |
| DTAPI_ISDBT_SRATE_1_8 | Use nominal sample rate divided by 8 (at most 1 segment)  |
| DTAPI_ISDBT_SRATE_MSK | AND mask  |

This is the sample rate used by the hardware.

### Sub Channel

Sub-channel number (0 ... 41) of the centre segment of the spectrum.

WARNING: This parameter is only used for PRBS generation, not for actual frequency translation.

| Value                   | Meaning                                     |
|-------------------------|---|
| DTAPI_ISDBT_SUBCH_SHIFT | Bit position of bit 0 of sub-channel number |
| DTAPI_ISDBT_SUBCH_MSK   | AND mask for encoded sub-channel field      |

ParXtra1, ParXtra2
Not used.

### **Remarks**

SetModControl (DTAPI\_MOD\_ISDBT, int, int, int) can be used only for modulation of "TMCC-encoded" streams with 204-byte packets (last 16 bytes containing the TMCC information). The DTAPI is capable of hierarchical multiplexing too, but for using that the overload SetModControl (DtIsdbtPars&) has to be used.

The ISDB-T modulator does not use the Broadcast Type parameter to set the number of segments. This enables the usage of broadcast type **BTYPE TV** for 1-segment modulation.

# **Modulation Mode: QAM**

 ${\it ModType}$ 

The QAM constellation is encoded in ModType according to the following table.

| ModType          | Meaning | Required Capability                         |
|------------------|---------|---|
| DTAPI_MOD_QAM16  | 16-QAM  | DTAPI_CAP_TX_QAM_A or                       |
| DTAPI_MOD_QAM32  | 32-QAM  | DTAPI_CAP_TX_QAM_B or<br>DTAPI CAP TX QAM C |
| DTAPI_MOD_QAM64  | 64-QAM  |   |
| DTAPI_MOD_QAM128 | 128-QAM |   |
| DTAPI_MOD_QAM256 | 256-QAM |   |

ParXtra0

Extra modulation parameter #0 is the ITU-T J.83 Annex.

| ITU-T J.83 Annex | Meaning                          | Required Capability |
|------------------|----------------------------------|---------------------|
| DTAPI_MOD_J83_A  | J.83 annex A (DVB-C)             | DTAPI_CAP_TX_QAM_A  |
| DTAPI_MOD_J83_B  | J.83 annex B<br>("American QAM") | DTAPI_CAP_TX_QAM_B  |
| DTAPI_MOD_J83_C  | J.83 annex C<br>("Japanese QAM") | DTAPI_CAP_TX_QAM_C  |

ParXtra1

For J.83 Annex B, this parameter specifies the interleaving mode used as specified in the table below. For Annex A and C this parameter is not used.

| Value                   | CW   | I   | J  | Burst protection 64-/256-QAM |
|-------------------------|------|-----|----|------------------------------|
| DTAPI_MOD_QAMB_I128_J1D | 0001 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_164_J2   | 0011 | 64  | 2  | 47 μs / 33 μs                |
| DTAPI_MOD_QAMB_I32_J4   | 0101 | 32  | 4  | 24 μs / 16 μs                |
| DTAPI_MOD_QAMB_I16_J8   | 0111 | 16  | 8  | 12 μs / 8.2 μs               |
| DTAPI_MOD_QAMB_I8_J16   | 1001 | 8   | 16 | 5.9 μs / 4.1 μs              |
| DTAPI_MOD_QAMB_I128_J1  | 0000 | 128 | 1  | 95 μs / 66 μs                |
| DTAPI_MOD_QAMB_I128_J2  | 0010 | 128 | 2  | 190 μs / 132 μs              |
| DTAPI_MOD_QAMB_I128_J3  | 0100 | 128 | 3  | 285 μs / 198 μs              |
| DTAPI_MOD_QAMB_I128_J4  | 0110 | 128 | 4  | 379 μs / 264 μs              |
| DTAPI_MOD_QAMB_I128_J5  | 1000 | 128 | 5  | 474 μs / 330 μs              |
| DTAPI_MOD_QAMB_I128_J6  | 1010 | 128 | 6  | 569 μs / 396 μs              |
| DTAPI_MOD_QAMB_I128_J7  | 1100 | 128 | 7  | 664 μs / 462 μs              |
| DTAPI_MOD_QAMB_I128_J8  | 1110 | 128 | 8  | 759 μs / 528 μs              |

ParXtra2

Not used.

### **Modulation Mode: T2MI**

When T2-MI modulation is used **DTAPI** expects a 188-byte transport stream carrying T2-MI packets. **DTAPI** will decode the T2-MI packets and perform the DVB-T2 modulation.

#### ParXtra0

Extra modulation parameter #0 specifies the T2-MI transport-stream bitrate.

#### ParXtra1

Extra modulation parameter #1 is the OR of values for the following fields: First T2-MI Component PID value, Second T2-MI Component PID value and Multi-Profile.

### First T2-MI Component PID

PID-value of the first T2-MI component (0 ... 8190).

| Value                         | Meaning   |
|-------------------------------|---|
| DTAPI_MOD_T2MI_PID1<br>_SHIFT | Bit position of bit 0 of PID-value of the first T2-MI component |
| DTAPIMOD_T2MI_PID1<br>_MSK    | AND mask for encoded PID field                                  |

### Second T2-MI Component PID

PID-value of the second T2-MI component (0 ... 8190). This field is only valid if multi-profile is enabled.

| Value                         | Meaning  |
|-------------------------------|--|
| DTAPI_MOD_T2MI_PID2<br>_SHIFT | Bit position of bit 0 of PID-value of the second T2-MI component |
| DTAPIMOD_T2MI_PID2<br>_MSK    | AND mask for encoded PID field                                   |

# Multi-Profile

| Value                   | Meaning  |
|-------------------------|--|
| DTAPI_MOD_T2MI_MULT_DIS | Single profile, only first T2-MI component PID is used |
| DTAPI_MOD_T2MI_MULT_ENA | Multi-profile, bothT2-MI components PIDs are used      |
| DTAPI_MOD_T2MI_MULT_MSK | AND mask for encoded Multi-Profile field               |

### ParXtra2

Extra modulation parameter #2 specifies the DVB-T2 bandwidth.

| Value              | Meaning |
|--------------------|---------|
| DTAPI_DVBT2_1_7MHZ | 1.7 MHz |
| DTAPI_DVBT2_5MHZ   | 5 MHz   |
| DTAPI_DVBT2_6MHZ   | 6 MHz   |
| DTAPI_DVBT2_7MHZ   | 7 MHz   |
| DTAPI_DVBT2_8MHZ   | 8 MHz   |
| DTAPI_DVBT2_10MHZ  | 10 MHz  |

# Result

| DTAPI_RESULT  | Meaning  |
|---|--|
| DTAPI_OK  | The modulation parameters have been set successfully   |
| DTAPI_E_DEV_DRIVER                                  | Unclassified failure in device driver  |
| DTAPI_E_NOT_IDLE                                    | Transmit-control state is not DTAPI_TXCTRL_IDLE; The requested modulation parameters can only be set in idle state |
| DTAPI_E_INVALID_BANDWIDTH                           | Invalid value for bandwidth field  |
| DTAPI_E_INVALID_CONSTEL                             | Invalid value for constellation field  |
| DTAPI_E_INVALID_FHMODE                              | Invalid value for frame-header mode field  |
| DTAPI_E_INVALID_GUARD                               | Invalid value for guard-interval field   |
| DTAPI_E_INVALID_INTERLVNG                           | Invalid value for interleaving field   |
| DTAPI_E_INVALID_J83ANNEX<br>DTAPI_E_INVALID_ROLLOFF | Invalid value for J.83 annex   |
| DTAPI_E_INVALID_MODE                                | Modulation type is incompatible with modulator   |
| DTAPI_E_INVALID_PILOTS                              | Pilots cannot be specified in C=1 mode   |
| DTAPI_E_INVALID_RATE                                | Invalid value for convolutional rate or FEC code rate  |
| DTAPI_E_INVALID_TRANSMODE                           | Invalid value for transmission-mode field  |
| DTAPI_E_INVALID_USEFRAMENO                          | Invalid value for use-frame-numbering field  |
| DTAPI_E_NOT_ATTACHED                                | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED                               | The device does not include a modulator  |

### **Remarks**

Changing the modulation parameters may change the symbol rate!

This is because DTAPI automatically computes the symbol rate from the transport-stream rate (as set with SetTsRateBps) and the modulation parameters.

# **DtOutpChannel::SetOutputLevel**

Set level for modulators with an adjustable output level.

# **Function Arguments**

LeveldBm

Output level expressed in units of 0.1dBm. For example, -30 maps to  $-30 \times 0.1 = -3$ dBm. Most modulators do not support a granularity of 0.1dBm. In that case, the output level is rounded to the nearest value supported by the modulator.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The output level has been set successfully               |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function    |
| DTAPI_E_NOT_SUPPORTED | The channel does not support a controllable output level |

### **Remarks**

# DtOutpChannel::SetMultiModConfig

Configures a modulator for generation of multiple adjacent channels through one output channel.

### **Function Arguments**

NumSubChan

Number of adjacent channels: 1...4 (NumSubChan=1 switches-off multi-channel modulation).

FreqSpacing

Frequency-distance between the center frequencies of the sub-channels.

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Power state has been changed successfully             |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | The channel does not support the requested operation  |
| DTAPI_E_NUM_CHAN      | Invalid number of sub-channels                        |

### **Remarks**

This method allows users to generate multiple adjacent channels (sub-channels) through one output channel. For example: generating two DVB-C or two DVB-T channels through a single DTA-2111.

The sub-channels share the same modulation settings, set through **SetModControl** and **SetTsRateBps**. When the transmit mode is set to **HOLD**, the multi-modulation channel settings are validated and checked against the limits of the card.

The center frequencies of the sub-channels are located around the carrier frequency of the RF up-converter, in formula: FreqUpConverter - (NumSubChan-1)\*FreqSpacing/2 + SubChan\*FreqSpacing, where SubChan is the sub-channel (0...NumSubChan-1)

Each sub-channel has its own Transmit FIFO. The **Write** and **GetFifoLoad** methods have an optional *SubChan* parameter to control the contents of each channel individually.

### Notes:

- 1) Underflow of one of the Transmit FIFOs stalls the transmission of all sub-channels.
- 2) Multi-channel performance is CPU bound, use the GetFlags to check for errors.

# **DtOutpChannel::SetPower**

DTA-102 only. Turn on/off power for a target adapter attached to the DTA-102.

# **Function Arguments**

Power

New power state according to the table below.

| Value           | Meaning  |
|-----------------|--|
| DTAPI_POWER_OFF | No power is applied. The 25-pin sub-D connector is compatible with DVB-SPI |
| DTAPI_POWER_ON  | Apply power (+5V) to pin 12 and 25 of the 25-pin sub-D connector           |

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | Power state has been changed successfully              |
| DTAPI_E_INVALID_MODE  | The specified power-mode value is invalid              |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function  |
| DTAPI_E_NOT_SUPPORTED | The hardware function does not support target adapters |

# **Remarks**

After Attach and after Reset, power is turned off.

# **DtOutpChannel::SetRfControl**

Set upconverter parameters for devices with on-board RF upconverter.

# **Function Arguments**

RfRate

New carrier frequency for RF upconverter, specified in Hertz. RfRate is rounded to the nearest RF frequency compatible with the frequency resolution.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The carrier frequency has been changed successfully  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver  |
| DTAPI_E_INVALID_RATE  | The specified carrier frequency is incompatible (too low or too high) with the upconverter |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function                                      |
| DTAPI_E_NOT_SUPPORTED | The device does not have an RF upconverter   |

### **Remarks**

Changing the RF frequency takes some time to let the PLL settle at the new frequency.

# **DtOutpChannel::SetRfMode**

Set special modes for devices with on-board RF upconverter.

# **Function Arguments**

RfMode

New RF upconverter mode according to the table below.

| Value               | Meaning               |
|---------------------|-----------------------|
| DTAPI_UPCONV_CW     | Generate carrier only |
| DTAPI_UPCONV_MUTE   | Mute RF output signal |
| DTAPI_UPCONV_NORMAL | Normal mode           |

The RF-modes mentioned above can be OR-ed with the values specified in the table below:

| Value                | Meaning                  |
|----------------------|--------------------------|
| DTAPI_UPCONV_SPECINV | Apply spectral inversion |

# Result

| DTAPI_RESULT          | Meaning   |  |
|-----------------------|---|--|
| DTAPI_OK              | The new upconverter mode has been set successfully    |  |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                 |  |
| DTAPI_E_INVALID_MODE  | The specified upconverter mode is invalid             |  |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |  |
| DTAPI_E_NOT_SUPPORTED | The channel does not support the requested operation  |  |

# **Remarks**

# **DtOutpChannel::SetSfnAllowedTimeDiff**

Set the maximum allowed time difference between the timestamps associated with samples and the actual transmission time. In case this maximum is exceeded **DTAPI\_SFN\_TOO\_EARLY\_ERR** or **DTAPI SFN TOO LATE ERR** error flag is set.

# **Function Arguments**

TimeDiff

Maximum allowed time difference in nanoseconds. The valid range is 0 ... 1000000.

### Result

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | Maximum allowed time difference has been set successfully                       |
| DTAPI_E_NOT_IDLE              | Cannot set allowed time difference because transmit control is not IDLE         |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# **DtOutpChannel::SetSfnControl**

Sets the SFN-operation mode and an optional timeoffset in nanoseconds.

# **Function Arguments**

SfnMode

SFN operation mode

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_SFN_MODE_DISABLED | SFN is disabled (default mode after initialization)   |
| DTAPI_SFN_MODE_AT_1PPS  | Start transmission after 1PPS (with an optional time offset) thereafter free running. When the transmit control is changed from IDLE to HOLD or SEND an absolute timestamp is assigned to the first sample. |
| DTAPI_SFN_MODE_DVBT_MIP | SFN operation using embedded timestamps in DVB-T MIP  |
| DTAPI_SFN_MODE_T2MI     | SFN operation using embedded timestamps in T2-MI  |

TimeOffset

Timeoffset in nanoseconds. Valid range if SfnMode is  $\mathtt{DTAPI\_SFN\_MODE\_AT\_1PPS}$ : 0...1000.000.000 (0...1second) for the other modes: -500.000.00...+500.000.00 (-0.5...+0.5second).

### Result

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | SFN control has been set successfully   |
| DTAPI_E_NOT_IDLE              | Cannot set allowed time difference because transmit control is not IDLE         |
| DTAPI_E_SFN_DISABLED          | SFN is disabled   |
| DTAPI_E_SFN_NOT_SUPPORT<br>ED | Output port does not support SFN. It does not have capability DTAPI_CAP_TX_SFN. |
| DTAPI_E_NOT_ATTACHED          | Channel object is not attached to a hardware function                           |

# **DtOutpChannel::SetSnr**

Sets noise generation mode and signal-to-noise ratio for modulators with a hardware-based white-noise generator.

# **Function Arguments**

Mode

Noise generation mode to be used.

| Value                | Meaning                                     |
|----------------------|---|
| DTAPI_NOISE_DISABLED | No noise generation                         |
| DTAPI_NOISE_WNG_HW   | Use build-in hardware white noise generator |

SNR

Desired signal-to-noise ratio, expressed in units of 0.1dB. For example,  $250 = 250 \times 0.1 = 25$ dB. The table below specifies the valid range for SNR, based on the used hardware and noise generation mode.

| Device  | Noise mode         | Valid SNR range |
|---------|--------------------|-----------------|
| DTA-107 | DTAPI_NOISE_WNG_HW | 0.0 35.9 dB     |

### Result

| DTAPI_RESULT          | Meaning   |
|-----------------------|---|
| DTAPI_OK              | Noise mode and SNR have been set successfully         |
| DTAPI_E_DEV_DRIVER    | Unclassified failure in device driver                 |
| DTAPI_E_INVALID_ARG   | SNR value is invalid                                  |
| DTAPI_E_INVALID_MODE  | The specified noise generation mode is not valid      |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function |
| DTAPI_E_NOT_SUPPORTED | Setting the SNR not supported                         |

# Remarks

# **DtOutpChannel::SetSpiClk**

DTA-2142 only. Set the DVB-SPI clock frequency in case the SPI channel is operating with a fixed clock (I/O configurations SPIFIXEDCLK, SPISER8B, SPISER10B).

# **Function Arguments**

SpiClk

Specifies the frequency of the fixed DVB-SPI clock in Hertz.

### Result

| DTAPI_RESULT          | Meaning  |
|-----------------------|--|
| DTAPI_OK              | The TS-over-IP parameters have been applied successfully |
| DTAPI_E_NOT_ATTACHED  | Channel object is not attached to a hardware function    |
| DTAPI_E_INVALID_MODE  | The SPI clock is not fixed (SPI mode is SPIDVBMODE)      |
| DTAPI_E_NOT_SUPPORTED | Not a DVB-SPI channel                                    |

# **Remarks**

# **DtOutpChannel::SetTsRateBps**

Set the channel's transport-stream rate, based on 188-byte transport packets.

# **Function Arguments**

**TsRate** 

New transport-stream rate (@188) specified in bits per second.

### Result

| DTAPI_RESULT            | Meaning   |  |
|-------------------------|---|--|
| DTAPI_OK                | The transport-stream rate has been changed successfully   |  |
| DTAPI_E_DEV_DRIVER      | Unclassified failure in device driver   |  |
| DTAPI_E_INVALID_RATE    | The specified transport-rate is invalid (negative) or incompatible (too high) with the attached hardware function |  |
| DTAPI_E_MODPARS_NOT_SET | For modulators: cannot set transport-rate because modulation parameters have not been set                         |  |
| DTAPI_E_NOT_ATTACHED    | Channel object is not attached to a hardware function   |  |
| DTAPI_E_NOT_SUPPORTED   | Setting the TS rate is not allowed  |  |

### Remarks

For transmit modes that are not based on 188-byte packets, the transport-stream rate will be different from the line clock. For example, in modes **DTAPI\_TXMODE\_204** and **DTAPI\_TXMODE\_ADD16** the line clock rate is set to 204/188 times the specified transport-stream clock.

The transport-stream rate is usually set in the initialisation phase after AttachToPort. It is recommended to first set the transmit mode with SetTxMode before setting the TS rate with SetTsRateBps.

For modulators the modulation parameters have to be set with **SetModControl** first before setting the TS rate with **SetTsRateBps**.

**SetTsRateBps** may also be used while packets are being transmitted. The DTA and DTU series of devices impose no constraints on the bit-rate step size or on the number of changes per second. Note however that bit-rate changes may lead to a (temporary) violation of the MPEG-2 Systems requirements on transport-streams.

The transport-stream rate may be set to zero. This effectively disables packet transmission and may stall the output channel.

# **DtOutpChannel::SetTsRateRatio**

Set the ratio between transport-stream rate and external clock frequency. If the external clock frequency differs from the specified frequency, the transport stream rate will differ from the desired value by the same percentage.

# **Function Arguments**

**TsRate** 

Transport stream rate in bits per second.

RefClk

Frequency (in Hz) of the external reference clock applied to the device.

### Result

| DTAPI_RESULT                  | Meaning   |
|-------------------------------|---|
| DTAPI_OK                      | The transport-stream ratio has been changed successfully              |
| DTAPI_E_DEV_DRIVER            | Unclassified failure in device driver                                 |
| DTAPI_E_INVALID_<br>TSRATESEL | The channel is not configured in <b>DTAPI_TSRATESEL_EXTRATIO</b> mode |
| DTAPI_E_NOT_SUPPORTED         | The hardware does not have an external clock input                    |

### **Remarks**

A ratio can only be set if the transport-stream rate selection (DTAPI\_IOCONFIG\_TSRATESEL) I/O configuration is DTAPI TSRATESEL EXTRATIO.

# **DtOutpChannel::SetTxControl**

Set transmit control.

# **Function Arguments**

TxControl

New value for transmit control according to the table below.

| Value             | Meaning   |
|-------------------|---|
| DTAPI_TXCTRL_IDLE | Packet transmission and DMA writes to the transmit FIFO are disabled.             |
| DTAPI_TXCTRL_HOLD | Packet transmission is disabled, but DMA writes to the transmit FIFO are enabled. |
| DTAPI_TXCTRL_SEND | Normal operation. Both packet transmission and DMA writes are enabled.            |

### Result

| DTAPI_RESULT            | Meaning  |
|-------------------------|--|
| DTAPI_OK                | Transmit control has been changed successfully   |
| DTAPI_E_DEV_DRIVER      | Unclassified failure in device driver  |
| DTAPI_E_INSUF_LOAD      | For modulators: FIFO load is insufficient to start modulation  |
| DTAPI_E_INVALID_LEVEL   | The output level specified in <b>SetOutputLevel</b> is invalid for the attached hardware function                |
| DTAPI_E_INVALID_MODE    | The specified value for transmit control is invalid or incompatible with the attached hardware function          |
| DTAPI_E_MODE_VIDEOSTD   | For TS-over-IP channels: The specified m_VideoStandard in the IpPars structure and the TxMode are not consistent |
| DTAPI_E_MODPARS_NOT_SET | For modulators: cannot start transmission because modulation parameters have not been set                        |
| DTAPI_E_MODTYPE_UNSUP   | For modulators: modulation type is not supported   |
| DTAPI_E_NO_IPPARS       | For TS-over-IP channels: cannot start transmission because IP parameters have not been specified yet             |
| DTAPI_E_NO_TSRATE       | Cannot start transmission because TS rate has not been set   |
| DTAPI_E_NOT_ATTACHED    | Channel object is not attached to a hardware function  |

### **Remarks**

Setting transmit control can be used for controlled start-up and shutdown of the streaming process. If transmit control is **DTAPI\_TXCTRL\_HOLD**, the transmit FIFO can be pre-loaded with packets (using **Write**), while no packets are transmitted yet. Then, if enough *credit* has been built up in the transmit

FIFO, transmit control is set to **DTAPI\_TXCTRL\_SEND**. This procedure prevents accidental Transmit-FIFO underflow in the start-up phase.

For TS-over-IP channels, transmit control values **HOLD** or **SEND** can only be entered if the IP transmission parameters have been specified using **SetIpPars**.

After AttachToPort and after Reset, transmit control is initialised to IDLE.

# **DtOutpChannel::SetTxMode**

Set the transmit mode for the output channel. It determines the conversions that will be applied to the data written to the output channel. Transmit mode has to be set while transmit mode is still idle, this is <u>before</u> setting transmit control to **DTAPI TXCTRL HOLD** or **DTAPI TXCTRL SEND**.

**Note**: For ASI/SDI input channels, first configure the output port for ASI or SDI with **setIoConfig**, group **IOSTD**. If an ASI-specific transmit mode is applied to a channel that is configured for SDI (or vice versa), an error will be returned.

# **Function Arguments**

TxMode

New transmit mode according to the table below.

| Value               | Meaning   |
|---------------------|---|
| DTAPI_TXMODE_188    | 188-byte mode<br>Packets in the Transmit FIFO are assumed to be 188 bytes<br>long. Packets are transmitted without modification.  |
| DTAPI_TXMODE_192    | 192-byte mode (DTA-102 only) Packets in the Transmit FIFO are assumed to be 192 bytes long. The SYNC byte of every second packet may be modified (not 0x47). PSYNC is pulsed at the start of every 192 byte packet. |
| DTAPI_TXMODE_204    | 204-byte mode Packets in the Transmit FIFO are assumed to be 204 bytes long. Packets are transmitted without modification.  |
| DTAPI_TXMODE_ADD16  | Add 16 bytes mode<br>Packets in the Transmit FIFO are assumed to be 188 bytes<br>long. The device adds 16 placeholder bytes (0) to every packet.  |
| DTAPI_TXMODE_MIN16  | Minus 16 bytes mode Packets in the Transmit FIFO are assumed to be 204 bytes long. The device removes the last 16 bytes of each packet.   |
| DTAPI_TXMODE_RAW    | Raw mode No assumptions are made on packet structure. Bytes in the buffer are transmitted unmodified. Null-packet stuffing cannot be applied. This mode is not allowed for TS-over-IP channels.                     |
| DTAPI_TXMODE_RAWASI | Raw ASI symbols (Ports needs CAP_RAWASI) The bytes in the buffer are assumed to be 10-bit packed raw ASI symbols which are transmitted at 270Mb/s.  |

The following modes are valid for channels configured as SDI.

| Value                   | Meaning   |
|-------------------------|---|
| DTAPI_TXMODE_SDI_FULL   | Full SDI mode The data in the Transmit FIFO is assumed to consist of complete SDI frames, including all synchronization information.  |
| DTAPI_TXMODE_SDI_ACTVID | Active Video SDI mode The data in the Transmit FIFO is assumed to be the active video part of SDI frames. The hardware adds blanking information to create a complete frame. This mode can only be used in combination with Huffman compression (i.e. with DTAPI_TXMODE_SDI_HUFFMAN flag). When using this mode with Huffman compression disabled, the behavior of the output channel is undefined. |

The following mode is valid for TS-over-IP transmission only.

| Value | Meaning   |
|-------|---|
|       | Raw IP mode The Transmit FIFO is assumed to contain time-stamped IP packets that are transmitted unmodified. Each IP packet shall be preceded by a DtRawIpHeader structure. |

For DVB-ASI output channels, TxMode can be OR-ed with following flags:

| DTAPI_TXMODE_BURST    | Burst mode The bytes making up a transport packet are sent in one burst, without K28.5 stuffing characters. If this flag is not specified, transmission of packet data is "continuous" (linear over time).   |
|-----------------------|--|
| DTAPI_TXMODE_TXONTIME | Transmit on timestamp The MPEG-2 packets in the Transmit FIFO are assumed to be prefixed with a 32-bit timestamp (54MHz resolution) and will be transmitted at the times indicated by the timestamps. See DTAPI Manual – Overview and Data Formats.pdf for more details. |

For output channels configured as SDI, TxMode can be OR-ed with the values specified in the table below:

| Value                | Meaning   |
|----------------------|---|
| DTAPI_TXMODE_SDI_10B | 10-bit SDI samples<br>Indicates that SDI data in the Transmit FIFO is assumed to consist of 10-bit SDI samples. If both this flag and the 16B flag are omitted, 8-bit samples is assumed.   |
| DTAPI_TXMODE_SDI_16B | 16-bit SDI samples Indicates that SDI data in the Transmit FIFO is assumed to consist of 10-bit SDI samples packed in 16-bits. Only the 10 least significant bits of each 16-bit sample are used. If both this flag and the 10B flag are omitted, 8-bit samples is assumed. 16B mode is only supported by cards having the CAP_MATRIX capability. |

| Huffman compression  |
|--|
| Indicates that the SDI frame in the Transmit FIFO is assumed to be Huffman compressed. Huffman compression is not supported by cards that support HD-SDI such as the DTA-2152. |

For genlock-capable cards the output channel can be configured to operate in genlock mode (see **SetIOConfig**). When the genlock mode and the requested transmit mode conflict, **DTAPI E INVALID MODE** error will be returned.

#### StuffMode

This parameter controls the behaviour of the output when there is no packet data available for transmission from the Transmit FIFO.

# For channels configured as ASI:

If StuffMode is '1' (On), the output is stuffed with null packets. The size of inserted null packets is matched to TxMode. Packet Stuffing is not supported if TxMode is DTAPI\_TXMODE\_RAW, because both packet size and packet boundaries are unknown (DTAPI\_E\_MODE error is returned.)

If StuffMode is '0' (Off), null-packet stuffing is not applied. If the Transmit FIFO underflows:

- For DVB-ASI outputs (DTA-100, DTA-140), the output is stuffed with K28.5 characters;
- For DVB-SPI outputs (DTA-102), DVALID is de-asserted.

### For channels configured as SDI:

This parameter is ignored if genlock is not supported.

If genlock is supported, but the output channel is not configured to operate in genlock mode, this parameter enables *black-frame stuffing*: The SDI output is stuffed with black frames when there is no packet data available in the Transmit FIFO.

Note that this parameter is ignored when the transmit channel is in SDI genlock mode, since the driver will automatically enable black-frame stuffing in this case.

Black-frame stuffing is not supported by cards supporting the matrix model such as the DTA-2152.

#### Result

| DTAPI_RESULT         | Meaning   |
|----------------------|---|
| DTAPI_OK             | Transmit mode has been changed successfully   |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver   |
| DTAPI_E_INVALID_MODE | The specified transmit mode is invalid or incompatible with the output channel  |
| DTAPI_E_NO_GENREF    | No genlock reference port has been configured   |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function   |
| DTAPI_E_NOT_IDLE     | For DTA-110T and DTA-160 only: transmit mode can only be changed when transmit-control state is <code>dtapi_txcltrl_idle</code> |

#### **Remarks**

Changing the transmit mode may change the transmit-clock rate! For example, if transmit mode is changed from **DTAPI\_TXMODE\_ADD16** to **DTAPI\_TXMODE\_188** the transmit-clock is multiplied by 188/204. The **DTAPI** keeps the transport-stream rate constant.

The transmit mode is usually set in the initialisation phase just after AttachToSerial, AttachToSlot, AttachToType or Reset. It is recommended to set the transmit mode before setting the transport-stream rate.

It is recommended to stop transmission and clear the Transmit FIFO with ClearFifo before changing transmit mode.

# **DtOutpChannel::SetTxPolarity**

Set the polarity of the DVB-ASI output signal.

# **Function Arguments**

TxPolarity

New polarity according to the table below.

| Value                | Meaning                         |
|----------------------|---------------------------------|
| DTAPI_TXPOL_NORMAL   | Generate a 'normal' ASI signal  |
| DTAPI_TXPOL_INVERTED | Generate an inverted ASI signal |

### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | The polarity of the ASI signal has been changed successfully |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver                        |
| DTAPI_E_INVALID_MODE | The specified polarity is invalid                            |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function        |
| DTAPI_E_NOT_SUPPORT  | Setting the polarity is not support by this output channel   |

### Remarks

This function can be used to test if an ASI receiver is capable of receiving both normal and inverted ASI signals.

# **DtOutpChannel::Write**

Write data to the output channel. To avoid deadlock, the user shall meet certain preconditions as described in the Remarks section below.

### **Function Arguments**

pBuffer

Pointer to the buffer containing the data to be written to the output channel. The pointer must be aligned to a 32-bit word boundary, except for IP output channels for which there are no alignment restrictions.

*NumBytesToWrite* 

Number of bytes to be written to the output channel. The value of NumBytesToWrite must be a multiple of 4, except for IP output channels, which can accept any positive value.

SubChan

Sub-channel selection, used for multi-channel modulation see DtOutpChannel::SetMultiModConfig.

#### Result

| DTAPI_RESULT         | Meaning  |
|----------------------|--|
| DTAPI_OK             | Write operation has been completed successfully  |
| DTAPI_E_DEV_DRIVER   | Unclassified failure in device driver  |
| DTAPI_E_IDLE         | Cannot write data because transmit control is IDLE   |
| DTAPI_E_INVALID_BUF  | The buffer is not aligned to a 32-bit word boundary  |
| DTAPI_E_INVALID_SIZE | The specified transfer size is negative or not a multiple of four  |
| DTAPI_E_NO_TSRATE    | For TS-over-IP channels: cannot write data because transport-<br>stream rate has not been specified, or TS rate is too low |
| DTAPI_E_NOT_ATTACHED | Channel object is not attached to a hardware function  |

### Remarks

Preconditions:

- Transmit mode must be **HOLD** or **SEND**, otherwise **DTAPI\_E\_IDLE** is returned;
- If transmit mode is **HOLD**, the amount of data written may not overflow the transmit FIFO, or deadlock will be the result.

If transmit mode is **SEND**, it is *strongly recommended* that the amount of data written does not overflow the transmit FIFO. Under certain conditions, overflowing the transmit FIFO will work reliably without deadlock, but these conditions are hard to specify. Generally speaking it is safer for a user application to monitor the FIFO load and never write more data than can be contained in the FIFO.

Write returns when all data has been transferred to the transmit FIFO.
